LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) P.N.C. DBA PACIFIC ELECTRIC State Contractors License No. / Class / Expires 61-0886

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Contractor's Signature #
 Date

OWNER / BUILDER DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5), Business and Professions Code: Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure prior to its issuance, also requires the applicant for permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law [Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code] or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):

Please check the following:

I, AS OWNER OF THE PROPERTY, OR MY EMPLOYEES WITH WAGES AS THEIR SOLE COMPENSATION, WILL DO THE WORK, AND THE STRUCTURE IS NOT INTENDED OR OFFERED FOR SALE (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of the property, who builds or improves thereon, and who does the work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.)

I, AS OWNER OF THE PROPERTY, AM EXCLUSIVELY CONTRACTING WITH LICENSED CONTRACTORS TO CONSTRUCT THE PROJECT (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of the property who builds or improves thereon, and who contracts for the projects with a contractor's license pursuant to the Contractor's License Law.)

I AM EXEMPT under Section _____ B. & P.C. for this reason: _____

Owner's Signature #
 Date

WORKERS' COMPENSATION DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY, one of the following declarations:

I HAVE AND WILL MAINTAIN A CERTIFICATE OF CONSENT TO SELF-INSURE FOR WORKERS' COMPENSATION, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I HAVE AND WILL MAINTAIN WORKERS' COMPENSATION INSURANCE, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
 Carrier STATE FUND Policy Number 1529725 Exp. Date 12-9-00
 (This section need not be completed if the permit is for one hundred dollars (\$100) or less.)

I CERTIFY THAT IN THE PERFORMANCE OF THE WORK FOR WHICH THIS PERMIT IS ISSUED, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date 3-2-00 Applicant's Signature #
 WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that there is a construction lending agency for the performance of the work for which this permit is issued. (3097 civ. code)

Lender's Name
 Lender's Address City State Zip

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all City and County ordinances, rules, regulations, and State laws relating to building construction, and with any and all conditions of permit. I agree to defend, indemnify, and hold harmless the City of Napa, its officers, agents and employees from any and all claims and liability for personal injury, including death, and property damage, caused by, arising out of, or in any way connected with the issuance of this permit. I hereby acknowledge that issuance of this permit does not authorize the use or occupancy of any sidewalk, street, or subsidewalk. I hereby authorize representatives of the City of Napa to enter the above mentioned property for inspection purposes. I hereby certify that I am the property owner or am authorized to act on the property owner's behalf.

- DESCRIPTION OF WORK:
- I understand that Section 22-06, Napa Municipal Code, requires construction of curbs, gutters, sidewalks and drainage with all building improvements and that this permit is subject to compliance with the above provisions. I promise to construct improvements in accord with the above provisions according to line and grade as furnished by the City Engineer.
 - I understand that building on this property is regulated by the Building Codes, Zoning Ordinances, Fire Ordinances, and set-back line requirements and by State Housing Law. I promise that any construction under this permit will be in accord with these requirements. I further understand that I alone am responsible for seeing that these requirements are met and that by issuing this permit, the City of Napa is making no representation, express or implied, that my plans conform to any of these requirements.
 - I understand that the property on which the work under this permit is to be performed may be subject to easements, or other restrictions which may limit the placement of improvements on the property. I understand that I alone am responsible for seeing that the improvements are placed properly and that, by issuing this permit, the City of Napa is making no representations, either express or implied, that the placement of the improvements conform to any restrictions that there may be on the property.
 - I hereby agree to save, indemnify, and keep harmless the City of Napa against all liabilities, judgments, cost and expenses which may in any way accrue against said City in consequence of the granting of this permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk, placed by virtue thereof, and will in all things strictly comply with the conditions of my permit.

Dear Project Developer/Contractor:

As we near the completion of your project, the following departments must sign off your project prior to utility connections and issuance of a Certificate of Occupancy. All of the below will not pertain to all projects. Be sure to call each department well in advance to schedule the inspections. The Building and Electrical Departments will be the last ones to sign and we will notify P.G.&E. Sub-contractors shall have a City of Napa business license. Please list all sub-contractors and license #'s on the reverse side of this form.

Contractor (Name) State Contractors License No / Class / Expires
STEVE SILVA PLUMBING SHO 483676 / C_36 /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

[Signature] *[Date: 12/22/05]*
 Contractor's Signature Date

OWNER / BUILDER DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).

Please check one of the following

I, AS OWNER OF THE PROPERTY, OR MY EMPLOYEES WITH WAGES AS THEIR SOLE COMPENSATION, WILL DO THE WORK, AND THE STRUCTURE IS NOT INTENDED OR OFFERED FOR SALE (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of the property, who builds or improves thereon, and who does the work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proof that he or she did not build or improve for the purpose of sale.)

I, AS OWNER OF THE PROPERTY, AM EXCLUSIVELY CONTRACTING WITH LICENSED CONTRACTORS TO CONSTRUCT THE PROJECT (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of the property who builds or improves thereon, and who contracts for the projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

I AM EXEMPT under Section _____ B. & P. C. for this reason _____

WORKERS' COMPENSATION DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY one of the following declarations.

I HAVE AND WILL MAINTAIN A CERTIFICATE OF CONSENT TO SELF-INSURE FOR WORKERS' COMPENSATION, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I HAVE AND WILL MAINTAIN WORKER'S COMPENSATION INSURANCE, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My Workers' Compensation insurance carrier and policy number are:

Carrier: Redland Insurance C Policy Number: RPSI-11305-01 Exp. Date: 1/1/2006
 (This section need not be completed if the permit is for one hundred dollars (\$100) or less.)

I CERTIFY THAT IN THE PERFORMANCE OF THE WORK FOR WHICH THIS PERMIT IS ISSUED, I shall not employ any person in any manner so as to become subject to the Workers' Compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) _____ State Contractors License No. / Class / Expires _____
 None Identified / /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Contractor's Signature _____ Date _____

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) to the applicable item(s) of Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).

I, as owner of the property, or my employee with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code). The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.

I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code). The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.

I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.regnet.ca.gov/liclaw.html>

Owner's Signature _____ Date 5/2/16

WORKERS' COMPENSATION DECLARATION

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:

I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No. _____

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
 Carrier _____ Policy No. _____ Expiration Date _____
 Name of Agent _____ Tel No. _____

I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Property Owner or Authorized Agent Signature _____ Date _____

DECLARATION REGARDING LENDING AGENCY

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that there is a construction lending agency for the performance of the work for which this permit is issued. (3007 div. code)

DESCRIPTION OF WORK:

I understand that Section 22-86, Napa Municipal Code, requires construction of curbs, gutters, sidewalks and drainage with all building improvements and that this permit is subject to compliance with the above provisions. I promise to construct improvements in accord with the above provisions according to line and grade as furnished by the City Engineer.

I understand that building on this property is regulated by the Building Codes, Zoning Ordinances, Fire Ordinances, and set-back line requirements and by State Housing Law. I promise that any construction under this permit will be in accord with these requirements. I further understand that I alone am responsible for seeing that these requirements are met and that by issuing this permit, the City of Napa is making no representation, express or implied, that my plans conform to any of these requirements.

I understand that the property on which the work under this permit is to be performed may be subject to easements, or other restrictions which may limit the placement of improvements on the property. I understand that I alone am responsible for seeing that the improvements are placed properly and that, by issuing this permit, the City of Napa is making no representations, either express or implied, that the placement of the improvements conform to any restrictions that there may be on the property.

I hereby agree to save, indemnify, and keep harmless the City of Napa against all liabilities, judgments, cost and expenses which may in any way accrue against said City in consequences of the granting of the permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk, placed by virtue thereof, and will in all things strictly comply with the conditions of my permit.

LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) State Contractors License No. / Class / Expires
C.L.Y. INC. 690380 / /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Contractor's Signature: _____ Date: 10/2/14

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).)

I, as owner of the property, or my employees with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner/Builder will have the burden of proving that it was not built or improved for the purpose of sale.)

I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.)

I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by the permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>

Owner's Signature: _____ Date: _____

WORKERS' COMPENSATION DECLARATION

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:

I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No. _____

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are: Carrier: DOE Policy No. 4507017 Expiration Date: _____

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).
 I, as owner of the property, or my employees with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner/Builder will have the burden of proving that it was not built or improved for the purpose of sale.)
 I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.)
 I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>.

Dear Requestor:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control (DTSC).

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Sacramento's Central Files, please contact me at (916) 255-6449.

Sincerely,
RJ SAROIAN

**Subject: Report of Findings Targeted Phase II Environmental Investigation at
730 Waters Street, Napa, California**

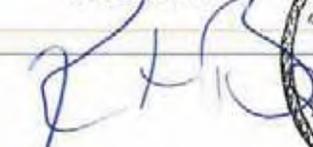

Dear Mr. Loban,

BSK Associates (BSK) has completed this targeted Phase II Investigation Report for Soil and Groundwater for the Adam's Cleaners Site located at 730 Water Street in Napa, California. The targeted Phase II report, which included background data review, soil and groundwater sampling, and report preparation, was conducted in accordance with BSK Proposal ES1410051, dated March 4, 2014. The enclosed report provides our assessment for use in site management or future site development activities.

We appreciate the opportunity to assist you during the preliminary phase of your project and look forward to continuing our relationship. If you have any questions, please contact us.

Respectfully submitted,

BSK ASSOCIATES

Kurt Balasek, P.G., 6162

**Targeted Phase II Investigation
730 Waters Street
Napa, California**

Introduction and Background

BSK Associates was contacted by a prospective buyer for an approximate 0.7 acre property located at 730 Waters Street in Napa, California (Figure 1). The property currently houses a dry cleaning business (Adam's Dry Cleaning) which has reportedly been active on the property for approximately ten years. During due diligence work for the real estate transaction, the consultant conducting the historic site review discovered evidence in County records that suggested some kind of dry cleaning operation had been on the property in the 1980's. Based on this "data gap", BSK was retained to conduct a targeted phase II soil and groundwater investigation.

Purpose and Scope of Services

The purpose of our work was to investigate reports of possible soil or groundwater impacts from former dry cleaning activities on the site identified in a Phase I Environmental Site Assessment (ESA) prepared in January 2014 by ODIC Environmental and Energy. Specifically, the ESA historic write up identified a "data gap" for the property they could not then substantiate. The report stated that:

"BETTY GUADAGNI is identified as the owner/operator of the facility, and multiple regulatory violations are reported including enforcement action notices dated Mar 24, Mar 25 and May 3, 1988. Nature of violation and regulatory enforcement actions are unknown, but EDR reports the enforcement action was "written informal", and they were results of "focused compliance inspection."

In accordance with our March 4, 2014 (BSK Proposal Number ES1410051), the scope of BSK's work included:

- Advancing two hand auger soil borings to approximate depths of 12 feet adjacent to existing sewer pipelines to evaluate possible pipeline leakage
- Collecting and analyzing up to four soil and two water samples
- Backfilling the borings with neat cement grout
- Analyzing the samples for Volatile Organic Compounds-use EPA method 8260
- Preparing a brief report describing our field work and findings

Site Description

The site is approximately 0.7 acres, almost entirely paved and contains two wooden structures that appear to have historically been used as residences (Figure 2). The northern-most building currently houses a small dry-cleaning operation called Adam's Dry

Cleaning which has reportedly been located on the property for the past 10 years. The northern portion of the site contains an approximate six foot concrete retaining wall structure that supports an approach ramp for a surface road bridge on First Street. A paved driveway ramp descends from the bridge approach ramp onto the property just east of the northern building until it reaches the surface level of Water Street. The property is bounded by First Street to the north, the locally elevated Napa Wine Train railroad track to the west, Water Street to the south and residential structures to the east. The Napa River is located to the south within 150 feet site. The site is well kept with not visible garbage or miscellaneous debris stored on the premises.

Geologic and Hydrogeologic Setting

The City of Napa lies within the Napa River Valley and within the Coast Ranges geomorphic province of California. According to the Geologic Map of California, Santa Rosa Sheet, the site is underlain by Quaternary-aged alluvium deposited by the Napa River. The site lies very near the Napa River. Soil cuttings derived from the two borings were recorded as medium brown clayey silts and silty clays. These soil types are typical of river overbank deposits.

Groundwater beneath the site was first observed at a depth of approximately 10 feet in boring B-1. Water rose slightly to a level of approximately 9 feet below surface grade. Similar observations were made in boring B-2. Local groundwater flow direction was not obtained from our site work but is likely influenced by tide and river level given the proximity of the Napa River to the site.

Site Activities and Observations

On Monday, March 10, 2014, personnel from BSK arrived on site and advanced two shallow soil borings using hand auger equipment. Borings B-1 and B-2 were advanced to depths of 13 and 11 feet, respectively. The borings were advanced adjacent to the sanitary sewer line cleanout leaving the dry cleaning business and at a location presumed to be in line with the property sewer line a distance of approximately 35 feet from the dry cleaning building. The Napa Sanitation District maps were not available at the time of the site work so Boring B-2 was located using the sewer cleanout from the southern building as a guide.

Three soil samples were collected at from boring B1 and depths of 5, 7 and 10 feet. The boring was extended to a depth of 13 to allow water into the hole for sampling. Water sample W-1 was collected from the boring at a depth of approximately 10 feet below site grade. No odor or discolored soil was observed in soil or water derived from this boring.

Two soil samples were collected from Boring B-2 at depths of 5 and 9 feet. The boring was extended to a depth of 11 feet to allow water into the hold for sampling. Water sample W-2

was collected from the boring at a depth of approximately 10 feet below site grade. No odor or discolored soil was observed in soil or water derived from this boring.

Upon completion of sampling, each boring was backfilled in accordance with the field procedures listed below.

All samples were logged under a chain-of-custody and transported to Kiff Analytical in Davis, California for Volatile Organic Compound Analysis using EPA test method 8260. The samples were transported in an ice chest containing ice and were delivered to the laboratory at 4:00 pm on March 10, 2014. The samples were placed on a 24-hour turn-around-time at the request of our client Glen Loban.

Field Procedures

Each soil boring was advanced using hand auger equipment pre-cleaned with an Alconox/water solution the double rinsed. The samples were obtained from the auger bucket by driving clean, stainless steel or brass tubes into soil within the bucket. Each end of the tube was covered with a Teflon barrier sheet the capped with a tightly fitting manufactured plastic cap. The samples were each labeled with sample location, depth of sample, time and date then placed in a re-sealable plastic bag and into an ice chest containing ice. The hand auger was cleaned between each sample using the method described above.

Water samples were obtained from each boring by dropping a clean disposable bailer into each hole attached to mason's string. The bailer was retrieved after filling with water and immediately decanted into the appropriate laboratory-provided sample bottles. The samples were each labeled with sample location, depth of sample, time and date then placed into an ice chest containing ice.

Once the samples were collected from each boring, a tremmie pipe consisting of 2 inch diameter PVC pipe was placed all the way to the bottom of the boring. Neat cement grout was carefully hand mixed under the supervision of the Napa County Department of Environmental Management inspector, James Newman, then poured into the tremmie pipe until the boring was full. Boring B1 was allowed to harden then covered with decorative gravel adjacent to the sidewalk. Boring B-2 was capped with approximately six inches of rapid-set concrete mix then coated with lamp black to match the surrounding pavement.

All soil generated during the work was placed in a steel drum and stored on site against the south wall of the dry cleaning building. The drum was left on site until laboratory results were obtained. Disposal of the soil cuttings and drum were not included in the scope of our work.

Findings

Analytical results for the four soil samples revealed no volatile organic compounds above the laboratory detection levels at the depths and locations sampled. Similarly, laboratory results for the two water samples revealed no volatile organic compounds above the laboratory detection limits at the depths and locations sampled. Laboratory results and chain-of-custody documentation is included as Appendix A.

Conclusions and Recommendations

The two borings locations were selected to be as close as possible to site sewer lines given that access for the purpose of sampling inside the building was not granted at the time of the investigation. Boring B-1 was placed within one foot of the dry cleaner building sewer cleanout; boring B-2 was placed approximately 35 feet away from the dry cleaner building, at a location lying between the presumed location of the site sewer and the sewer cleanout for the south on site building. These locations were selected to assess leakage from sewer lines as a result of possible dry cleaning solvent discharge into the sanitary system.

Based on site observations and analytical results of soil and groundwater samples obtained from the soil borings, no evidence of contamination from former or existing dry cleaning operations was discovered at the 730 Waters Street Property in Napa, California at the depths and locations sampled.

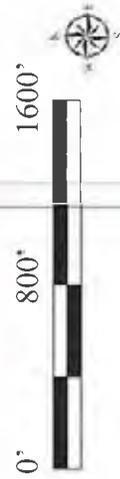

Limitations

Any statements and conclusions in this Interim Report of Findings are based upon the scope of work described in the Targeted Phase II Environmental Investigation dated March 4, 2014 (BSK #ES1410051) and on observations made on the date of our field work March 10, 2014. The work has been performed using a degree of skill consistent with that of competent environmental consulting firms performing similar work in the Napa, California area. Additional research or receipt of information regarding the property and release that was not disclosed or available to us during our assessment may result in revision of any conclusions or recommendations. No recommendation is made as to the suitability of the property for any purpose. The results of our assessment do not preclude the possibility that materials currently or in the future defined as hazardous are present on the property, nor do the results of our work guarantee the quality of groundwater beneath the property. This report is applicable only to the investigated property and should not be used for any other property. No warranty is expressed or implied.

Dear Mr. Balasek,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy D. Turpen". The signature is written in a cursive style.

| Is COC signed by relinquisher? | Project ID | / | / | |
| Is COC dated by relinquisher? | Sample Date | / | / | |
| Is the sampler's name on the COC? | Sample Time | | | |
| Are there analyses or hold for all samples? | Does COC match project history? | | | <input checked="" type="checkbox"/> N/A <input type="checkbox"/> Yes <input type="checkbox"/> No |

Samples:

Are sample custody seals intact? N/A Yes No

Are sample containers intact? / Yes No

Is preservation documented? / Yes No

In-house Analysis:

Are preservatives acceptable? N/A Yes No

Are samples within holding time? / Yes No

Are sample container types correct? / Yes No

Is there adequate sample volume? / Yes No

Comments: SR received 6 containers that are unpreserved for sample W1. The LOC states only 3. SR did not receive containers (that was) labeled as W2. The LOC states 3 unpreserved vials for sample W2. Out of the 6 containers labeled as W1, 3 of them have the matching times. SR will treat the 3 that do not have times as W2 until clarification from Client Services. EGJ 03/01/14 16:29

**APPENDIX F
QUALIFICATION OF ENVIRONMENTAL PROFESSIONAL**

SUMMARY OF QUALIFICATIONS

HYUNG KIM, PE
PRINCIPAL ENVIRONMENTAL CONSULTANT / MANAGING DIRECTOR

| EDUCATION | YEARS EXPERIENCE | |
|---------------------------------------|------------------|-------------------|
| | TOTAL | WITH CURRENT F RM |
| B.S., Chemical Engineering | 15+ | 11 |
| M.S., Civil/Environmental Engineering | | |

CURRENT PROFESSIONAL DESIGNATION/REGISTRATION

Registered Environmental Property Assessor #624247
Professional Civil Engineer #75083
General Engineering Contractor "A" #
Hazardous Substance Removal Contractor "HAZ"
QSD & QSP #20568
LEED-AP, USGBCI
Certified Environmental Manager #2057

OTHER PROFESSIONAL QUALIFICATIONS (Publications, Organizations, Training, Awards, Affiliations, etc.)

Member of AIChE (American Institute of Chemical Engineers)
Institute of Hazardous Material Management, CHMM Master Level #012554
Cal OSHA Hazwoper Training Certificate
Uniform Fire Code Training for CUPA Inspectors
CUPA Hazardous Waste Inspector Training 8 Hours
UST Inspector Training, CUPA, 8 Hours
Princeton Groundwater, Groundwater Pollution and Hydrology, Certificate of Completion, 2004
Professional Civil Engineering Service - Certificate of completion, 2007

SUMMARY OF EXPERIENCE

Possessing over 15+ years of industry experience, Mr. Kim manages all aspects of environmental assessment and consulting/engineering operations. With a strong educational and professional background in hazardous waste management, environmental regulatory compliance and engineering/assessment planning, he plays a pivotal role in the overall operations of environmental project management. Mr. Kim has also successfully represented the company to financial and & real estate institutions as a technical marketing Director.

As a Principal Engineer, Mr. Kim is responsible for in-house QA/QC management in remedial action design, contamination assessment, hazardous material management and real estate due diligence assessment. Mr. Kim also oversees and trains most of the in-house technical staff and directs environmental planning, abatement, engineering, assessment, and remediation projects with assistance from E.P., P.E, P.G., P.H.G, I.H., CAC, and other environmental certified professionals.

Attached please find our PHASE I ENVIRONMENTAL SITE ASSESSMENT, ("the Report") for the above-mentioned Subject Property. This report has been prepared by Odic for the Client under the professional supervision of the principal and/or senior staff whose seal(s) and signatures appear hereon. Neither Odic, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties, and has no personal bias with respect to the parties involved.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The Report speaks only as of its date, in the absence of a specific written update of the Report, signed and delivered by Odic.

There are no intended or unintended third party beneficiaries to this Report, unless specifically named. Odic is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the Report or on the closing of any business transaction. Thank you for the opportunity to prepare this Report, and assist you with this project. Please call us if you have any questions or if we may be of further assistance.

By signing below, Odic declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR 312 and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. Odic has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Respectfully Submitted,

A handwritten signature in black ink that reads "Mary Osborne". The signature is written in a cursive, flowing style.

Mary Osborne, CEM

Senior Consultant per §312.10 of 40 CFR 312

EXECUTIVE SUMMARY

ODIC Environmental (hereinafter referred to as ODIC) performed a *Phase I Environmental Site Assessment* (hereinafter *Phase I ESA* or *Report*) of the subject property (hereinafter referred to as the Property) in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to or deletions from this practice are described in the individual sections of this Report. A summary of findings is provided below:

| REPORT COMPONENT | SUMMARY OF FINDINGS |
|---|--|
| Current Property Address(es) | <p>The Property address is 711, 731, 743, 803, 819, 823, and 825 1st Street and 718 and 730 Water Street, Napa, Napa County, CA 94559.</p> <p><i>*1st Street has also been referred to as First Street</i></p> |
| Property Description | <p>The Property is located on the south side of 1st Street between Soscol Avenue to the west and McKinstry Street to the east. Water Street is south of the Property. It consists of seven parcels totaling 0.87 acres that is divided by a railroad that is owned by the Napa Valley Wine Train LLC. Therefore, for description purposes, the Property will be referred to as the West Property to indicate the four parcels west of the railroad tracks and the East Property to indicate the three parcels east of the railroad tracks.</p> <p>The West Property consists of four parcels with a total square footage of 15,964 or 0.37 acres that are assigned the addresses of 803, 819, 823, and 825 1st Street. The West Property is a vacant commercial lot. There are no improvements.</p> <p>The East Property consists of three parcels with a total square footage of 22,183 square feet or 0.5 acres that are assigned the addresses of 711, 731, and 743 1st Street and 718 and 730 Water Street. The East Property is improved with a commercial building (731 1st Street) occupied by Trade Brewing, three residential dwellings (711 1st Street, 718 Water Street, and 730 Water Street), a detached garage, and unpaved land (743 1st Street).</p> <p>The commercial building at 731 1st Street is occupied by Trade Brewing, a brewery and taproom. The three residential dwellings at 711 1st Street, 718 Water Street, and 730 Water Street are two-bedroom / one-bathroom single-family residential dwellings.</p> |
| Summary of Property Reconnaissance | <p>Site reconnaissance revealed no evidence of underground storage tanks, clarifiers, sumps, hazardous materials, or other environmental concerns. However, 731 1st Street was identified as a historical dry cleaning facility that operated an onsite dry cleaning machine from 2003 to 2014. Due to the building being remodeled into a brewery and taproom, no evidence of the former dry cleaning operations were observed.</p> |

| REPORT COMPONENT | SUMMARY OF FINDINGS |
|---|--|
| <p>Historical Use of the Property and Vicinity</p> | <p style="text-align: center;">West Property</p> <p>The West Property was developed with four residential dwellings and storage sheds in 1886. By 1891, one of the dwellings was replaced with the Hotel Di Genova. The hotel was later renamed the Lombardo Hotel until it was demolished in 1967. The West Property remained relatively unchanged until the mid-1950s when two of the residential dwellings were removed. In the late 1960s, all improvements on the West Property were demolished. Since then, it has remained a vacant commercial lot.</p> <p style="text-align: center;">East Property</p> <p>The East Property was developed with six residential dwellings and storage sheds in 1886 that included the four current buildings. In the 1940s, a restaurant building was constructed at the west side of the East Property replacing two of the dwellings. By the 1950s, the restaurant was converted into a furniture store known as First Street Furniture Store that operated into the 1970s. This building later became an office and plumbing showroom until it was demolished in 2009 to rebuild the railroad bridge and railroad tracks. In 1982, the residential dwelling at 731 1st Street was converted to a commercial use and was occupied by a possible dry cleaners known as Valet Cleaner & Tailor until 1988 followed by Ye Olde Valet Shoppe from the late 1980s through the 1990s. From 2003 to 2014, Adam’s Cleaners operated a dry cleaners with an onsite dry cleaning machine that uses perchloroethylene (PCE). In 2017, Trade Brewing moved into the building. The residential dwellings at 711 1st Street, 718 Water Street, and 730 Water Street have remained relatively unchanged since the 1880s.</p> <p style="text-align: center;">Site Vicinity</p> <p>In 1886, the site vicinity was developed with a wine cellar, grocery store, a blacksmith and residential dwellings to the north, a laundry business to the south, a residential dwelling to the west, and a lodging building to the east. By 1891, the wine cellar was replaced with a hay and grain warehouse and the residential dwelling to the west was redeveloped with the Thomson Houston Light Company that had a coal house and a tram way that traversed the Napa River. In 1910, the hay and grain warehouse became a vacant lot and the grocery store was converted into the Roma Hotel. The blacksmith and residential dwellings on the north side 1st Street and to the east of the Property remained, the Thomson Houston Light Company became the Napa Pump & Manufacturing Company with a machine shop and a foundry, and the tramway was removed. The site vicinity remained relatively unchanged until the 1960s when the blacksmith was replaced with the current commercial buildings, the west-adjacent site became a machine shop, and the southeast-adjacent building was developed as a truck and equipment repair building. Between the 1970s and the 1980s, a bridge for Soscol Avenue was constructed across the Napa River and the west-adjacent machine shop became part of Soscol Avenue. The site vicinity remained relatively unchanged until 2007 when a nearby auto repair and tire facility at the northeast corner of 1st Street and McKinstry Street was converted into the Oxbow Public Market. In 2009 the railroad bridge was replaced with the current bridge by the Napa Valley Wine Train LLC. Since 2009, the immediate site vicinity has remained relatively unchanged.</p> |

| REPORT COMPONENT | SUMMARY OF FINDINGS |
|---|---|
| Federal, State, and Local Agency Records Research | The Property address of 731 1 st (First) Street is identified in the RCRA-SQG, FINDS, NCDEH, DTSC HWTS, and EDR Historical Cleaners databases. EDR identified 731 1 st Street as being Valet Cleaner & Tailor in 1986-1988, Ye Olde Valet Shoppe from 1989-1994, and Adam's Cleaners from 2004-2013. Refer to Section 5.2 Property Listings for detailed information. |
| Potential Off-site Concerns | <p><u>Former Cleaners – 712-714 1st Street</u> A former dry cleaners known as Valet Cleaners & Tailors at 712-714 1st Street was located approximately 90 feet to the north of the Property. It was identified as having operated from 1965 to 1985. It is unknown if this site was a dry cleaning plant or a drop-off location. Moreover, this site is located up-gradient from the Property and groundwater in the site vicinity was identified as flowing to the southwest, towards the Property and the Napa River. Therefore, a potential vapor intrusion condition (VIC) exists from to the Valet Cleaners & Tailors north-adjacent site.</p> <p><u>Former Gas Plant and Machine Shop – 831 1st Street</u> Based on Sanborn Fire Insurance Maps from 1901 and 1910, the west-adjacent property that is currently Soscol Avenue was a former Napa Gas & Electric Company gas plant that became a machine shop that also operated an onsite foundry. A historical address identified for this site was 831 1st Street. Although this site became part of Soscol Avenue, since no known assessments have been conducted at the Property, a VIC exists.</p> |
| Non-Scope Items | Unless the <i>Client</i> contracted ODIC to investigate specific Non-Scope or Non-CERCLA items, evaluation of Non-Scope or Non-CERCLA items, including those addressed in Section 3.5 of this Report, is neither required nor relevant for compliance with the AAI Rule or E1527-13. |
| Inaccessible or Un-surveyed Portions of the Property | Full access to the entire Property was provided to ODIC, and there were no notable portions of the Property excluded from the survey and field inspection. |
| Significant Data Gap | A Phase II Subsurface Investigation was conducted in 2014 at the Property, specifically 731 1 st Street, by BSK Associates due to the building being identified as a former dry cleaning facility. BSK advanced two borings, B1 and B2, outside the buildings because interior access was not granted for their subsurface investigation. Although no contaminants of concerns were identified by BSK, since no borings were advanced inside the dry cleaning building and down-gradient, ODIC believes that the potential for soil, groundwater, and soil vapor contamination remains onsite and a significant data gap exists. |
| Conclusion | <p>REC identified: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No HREC identified: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No CREC identified: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No Significant data gap identified: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p> <p>For detailed discussion of Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), and/or Controlled Recognized Environmental Conditions (CRECs) in connection with the Property, see Section 8.0 of this <i>Report</i>.</p> |
| Recommendations and Opinions | Refer to Section 8.0 for ODIC's professional opinions and recommendations. |

1.0 INTRODUCTION

ODIC Environmental (ODIC) performed a *Phase I Environmental Site Assessment Report* (hereinafter referred as "*Phase I ESA*" or "*Report*") of the Property in conformance with the scope and limitations of the *ASTM International*, formerly known as the *American Society for Testing and Materials (ASTM)*, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, *ASTM Designation E1527-13*.

This *Report* documents the methods and findings of the *Phase I ESA* performed in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the Property.

This *Report* has been prepared by ODIC for the *Client* under the professional supervision of the principal and/or senior staff whose seal(s) and signature(s) appear hereon. Neither ODIC, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved.

PURPOSE AND OBJECTIVE

The purpose of this practice is to define good commercial and customary practice for conducting an *environmental site assessment* of a parcel(s) of *commercial real estate* with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *User (Client, Purchaser, Lender, Owner)* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* limitations on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes "*all appropriate inquiry* into the previous ownership and uses of the *Property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

Another purpose of this *Phase I ESA* is to assist the *Client* in its underwriting of a proposed mortgage loan on the Property, if this *Report* is prepared as a part of a pre-financing environmental due diligence, and to identify *Recognized Environmental Conditions (RECs)* in connection with the Property described in this *Report*.

ASTM Standard Practice E1527-13 defines a *Recognized Environmental Condition (REC)* as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to *release to the environment*; (2) under conditions indicative of a *release to the environment*; or (3) under conditions that pose a *material threat* of a future *release to the environment*. Conditions determined to be *de minimis* generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *Recognized Environmental Conditions* or *Controlled Recognized Environmental Conditions*.

A *Controlled Recognized Environmental Condition (CREC)* is a *Recognized Environmental Condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

A *Historical Recognized Environmental Condition (HREC)* is a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

- OSHA Hazard Communication Regulation, 29 C.F.R. §1910.1200

SCOPE OF WORK

This Report was prepared for the exclusive use of the Client or User of this Report. The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard Practice E1527-13; a visual survey of areas readily observable, easily accessible or made accessible by the Property contact, and interviews with owners, agents, occupants, or other appropriate persons involved with the Property. Municipal information was obtained through file reviews of reasonably ascertainable standard government record sources, and interviews with the authorities having jurisdiction over the Property. Findings, conclusions, and recommendations included in the Report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client (or User), and/or a review of readily available and supplied documents.

The scope of work for this Phase I ESA is in general accordance with the requirements of ASTM Standard Practice E 1527-13. This assessment included: 1) Property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of standard historical sources; 4) a review of standard regulatory agency records; and 5) a review of a regulatory database report provided by a third-party company such as Environmental Data Resources (EDR).

LIMITATIONS AND EXCEPTIONS

ODIC renders no opinion as to the Property condition at un-surveyed and/or inaccessible portions of the Property, which are described below. ODIC relies completely on the information, whether written, graphic or verbal, provided by the Property contact or as shown on any documents reviewed or received from the Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. The observations in this Report are valid on the date of the survey. Where access to portions of the Property or to structures on the Property was unavailable or limited, ODIC renders no opinion as to

the presence of petroleum products or hazardous substances in that portion of the Property or structure. In addition, ODIC renders no opinion as to the presence of, or indirect evidence relating to, petroleum products or hazardous substances where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

The conclusions provided by ODIC are based on the information obtained by visual survey of the Property, and information provided by agents representing the Property, or agents of the owner. In addition, ODIC has relied on certain information provided by state and other referenced parties, and on information contained in the files of federal, state and/or local agencies available to ODIC at the time of the assessment. Although there may have been some degree of overlap in the information provided by these various sources, ODIC did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these Environmental Services.

CERCLA Requirements Other Than *All Appropriate Inquiry* (ASTM Standard Practice E1527-13 1.1.3) - This practice does not address whether requirements in addition to *All Appropriate Inquiries* have been met in order to qualify for the *LLPs* (specified in 42 U.S.C. §9607(b)(3)(a) and (b) including the continuing obligation not to impede the integrity and effectiveness of *Activity and Use Limitations*), or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations).

It is acknowledged that ODIC's judgments shall not be based on scientific or technical tests or procedures beyond the Scope of Services or beyond the time and budgetary constraints imposed by the *Client*. It is acknowledged further that ODIC's conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. The *Client* also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the conclusions and opinion of this *Report* are not guaranteed to be a representation of actual conditions on the Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation.

In performing the Services, ODIC shall use that the degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the Services are rendered and not according to standards utilized or in effect at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

It should be noted that certain conditions may not have been reasonably identifiable or ascertainable from the available information during the course of this *Report*. ODIC assumes that information obtained from the record review and the interviews concerning the Property is reliable. However, ODIC cannot and does not warrant or guarantee that the information provided by these other sources is accurate or correct.

Some of the information provided in this *Report* is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This *Report* is subject to the limitations of historical documentation, availability, and accuracy of the pertinent records, and the personal recollections of those persons contacted. This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the *LLPs*. Furthermore, this *Report* does not intend to address health and safety concerns, if any, associated with the Property.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The *Report* speaks only as of its date, in the absence of a specific written update of the *Report*, signed and delivered by ODIC.

Controlled substances are not included within the scope of this standard. Persons conducting an *environmental site assessment* as part of an EPA Brownfields Assessment and Characterization Grant awarded under CERCLA 42 U.S.C. §9604(k)(2)(B) must include controlled substances as defined in the Controlled Substances Act (21 U.S.C. §802) within the scope of the assessment investigations to the extent directed in the terms and conditions of the specific grant or cooperative agreement. Additionally, an evaluation of *business environmental risk* associated with a parcel of *commercial real estate* may necessitate investigation beyond those identified in this practice.

SIGNIFICANT ASSUMPTIONS AND LIMITING CONDITIONS

The objective of ASTM Standard Practice E1527-13 is to help *Users* qualify for one of the CERCLA Landowner Liability Protections (LLPs). *Users* should be aware that there are other federal, state, and local environmental laws and regulations that can impose liabilities and obligations on owners and operators of real property that are outside the scope of this practice. This practice does not address all possible environmental liabilities that a *User* may need to consider in the context of a commercial real estate transaction. Therefore, *Users* may desire to expand the scope of pre-purchase or pre-finance due diligence to assess other business environmental risks that exist beyond CERCLA liability associated with the Property.

Business Environmental Risk (BER) is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, and is not an issue required to be investigated under this practice. A BER may include one or more of the non-scope issues contained in Non-Scope Considerations. Evaluation of Non-Scope or Non-CERCLA items, including those addressed in this *Report*, is not required nor relevant for compliance with the AAI Rule or ASTM Standard Practice E1527-13. Inclusion of any non-scope item in a Phase I Environmental Site Assessment report is entirely within the discretion of the *User* based on its own risk tolerance. Non-Scope Consideration should not be construed as requiring the inclusion of any non-scope issues in a Phase I Environmental Site Assessment report.

Any additional services contracted for between the *User* and ODIC including a broader scope of assessment, more detailed conclusions, liability/risk evaluations, recommendation for Phase II testing or other assessment activities, remediation techniques, etc., are beyond the scope of ASTM Standard Practice E1527-13, not part of this *Report*, and should only be included in the *Report* if so specified in the terms of engagement between the *User* and ODIC. Such additional services may include *business environmental risk* issues not included within the scope of this practice (ASTM Standard Practice E1527-13).

ASTM Standard Practice E1527-13 does not encompass analytical testing to evaluate Asbestos Containing Materials (ACM), radon, lead-based paint (LBP), drinking water quality, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, mold, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Such additional information regarding non-ASTM Standard Practice E1527-13 issues may be provided merely for the *User's* convenience, and cannot be used to bind this *Report* as a whole to the compliance and conformance with ASTM Standard Practice E1527-13. No disassembly of systems or building components or physical or invasive testing is to be performed unless the *Client* specifically calls for such testing as an additional scope of work.

ODIC has performed this *Phase I ESA* in conformance with the scope and limitations of ASTM Standard Practice E1527-13. This *Report* may not include all environmental conditions which can materially impact the Property other than those defined as RECs in ASTM Standard Practice E1527-13.

ODIC is not contracted to perform *Environmental Liens* and *Activity and Use Limitations (AULs)* searches via title records, and such is beyond the scope of services included in this *Report*. Information pertaining to deed restrictions and environmental liens, Activity/Use Limitations, title search/report was requested

from the *Report User*. This information may or may not be provided to ODIC at the time of the assessment. See pertinent sections of this *Report* for further discussion.

Interviews with past or current owners, operators and occupants may not be reasonably ascertainable and can constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 4.0), this data gap may or may not be expected to alter the findings of this assessment. See Section 8.0 for further discussion.

Adjoining sites, neighboring sites, or surrounding properties mentioned in this *Report* are defined only up to one parcel immediately next to the Property, and ODIC will only check immediately adjoining properties to identify historical use of the surrounding areas via historical sources or data on such adjoining properties, and/or walk-through visual inspection along the Property's perimeters to identify obvious signs of environmental concerns.

It is often not possible (under the "*reasonably ascertainable*" clause of the ASTM Standard Practice E1527-13) to identify every single historical business tenant or occupant of the Property. ODIC cannot be liable for not identifying all such past tenants or occupants of the project site.

This ESA did not necessarily comply with the ASTM Standard Practice E2600-15 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions." For assessment of potential "vapor encroachment conditions" (VECs) and to determine if a "vapor intrusion condition" (VIC) exists on-site, additional investigation beyond ASTM Standard Practice E1527-13 is required.

For the purposes of ASTM Standard Practice E1527-13, "migrate" and "migration" refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Vapor migration in the subsurface is described in ASTM Standard Practice E2600-15; however, nothing in this practice (ASTM Standard Practice E1527-13) should be construed to require application of ASTM Standard Practice E2600-15 standard to achieve compliance with all appropriate inquiries.

USER RELIANCE

This investigation was conducted in accordance with the *Client's* Environmental Site Assessment scope of work for the use and benefit of the *Client* and assignees. It is based, in part, upon documents, writings, and information owned, possessed, or secured by the *Client*. Neither this *Report*, nor any information contained herein, shall be used or relied upon for any purpose by any other person or entity without the express written permission of the *Client*.

All reports, both verbal and written, are for the sole use and benefit of the *Client*. Either verbally or in writing, third parties may come into possession of this *Report* or all or part of the information generated as a result of this work. In the absence of a written agreement with ODIC granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against ODIC, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold ODIC, the *Client* and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this *Report* shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

INDEPENDENT CONTRACTOR STATUS / PROFESSIONAL RESPONSIBILITY

In performing Services under the mutually agreed contractual agreement and verbal engagement, ODIC operates as, and has the status of, an independent contractor. Subject to any limitations established by the *Client* as to the degree of care and amount of time and expenses to be incurred and any other

limitations contained in the mutually agreed contractual agreement and verbal engagement, ODIC performs the Services consistent with the level of care and skill ordinarily exercised by other professional consultants under similar circumstances at the time the Services are performed. *Client* hereby acknowledges that whenever a Project involves hazardous or toxic materials there are certain inherent risk factors involved (such as limitations on laboratory analytical methods, variations in subsurface conditions, economic loss to *Client* or Property owner, a potential obligation for disclosure to regulatory agencies, a potential for a decrease in market value of real property, and the like) that may adversely affect the results of the Project, even though the Services are performed with such skill and care. No other representation, warranty, or guarantee, express or implied, is included or intended by the mutually agreed contractual agreement and verbal engagement.

QUALIFICATION STATEMENT OF ENVIRONMENTAL PROFESSIONAL

ODIC states that this ESA was performed under *Environmental Professional (EP)*'s direct supervision, that he/she has prepared and/or reviewed and approved the *Report*, and that the methods and procedures utilized in the development of this *Report* conform to minimum industry standards using both the *ASTM International*, formerly known as the *American Society for Testing and Materials (ASTM)*, Standard Practice E1527-13 and the United States – Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) as guidelines. ODIC certifies that ODIC's *Environmental Professionals* and *Subcontractors* are properly licensed, qualified and/or certified to conduct *Phase I Environmental Site Assessments*.

ODIC's EP declares that, to the best of his/her professional knowledge and belief, he/she meets the definition of *Environmental Professional* as defined in 40 CFR Part 312. ODIC's EP who prepared this assessment possesses the specific qualifications based upon education, training and experience to assess a property of the nature, history, and setting of the Property. ODIC has developed and performed the "*All Appropriate Inquiries*" in accordance with the standards and practices as defined in 40 CFR Part 312.

2.0 PROPERTY DESCRIPTION

2.1 PROJECT INFORMATION

| Project Information | | |
|---|--|-----------------|
| ITEM | | |
| Project Number | 6366640-ESAI | |
| Property Address(es) | 711, 731, 743, 803, 819, 823, and 825 1 st Street and 718 and 730 Water Street, Napa, Napa County, CA 94559 <i>*1st Street has also been referred to as First Street</i> | |
| Historical/Alternate Property Address(es) | According to Sanborn Fire Insurance Maps, historical addresses for the Property have included 717 1 st Street, 720 Water Street, 780 Water Street, 812 Water Street, 900 North Lawrence, and 905 North Lawrence. | |
| Tax Assessor's Parcel Number | East Property | |
| | Address | APN# |
| | 711 1 st Street | 003-241-003-000 |
| | 730 Water Street (731 1 st Street) | 003-241-005-000 |
| | 743 1 st Street | 003-241-006-000 |
| | West Property | |
| | Address | APN# |
| | 803 1 st Street | 003-235-005-000 |
| | 819 1 st Street | 003-235-006-000 |
| | 823 1 st Street | 003-235-004-000 |
| 825 1 st Street | 003-235-003-000 | |
| Property Name | None identified | |
| Property Inspection Date | August 13, 2018 | |
| Weather Condition | Cloudy, approximately 62 degrees Fahrenheit | |
| Site Visit Conducted by | Richard Kim, Senior Environmental Consultant | |
| Report Author | Richard Kim, Senior Environmental Consultant | |
| QA/QC Environmental Professional | Mary Osborne, Senior Environmental Consultant | |
| Property Location | The Property is located on the south side of 1 st Street between Soscol Avenue to the west and McKinstry Street to the east. Water Street is south of the Property. <i>True north was altered approximately 20 degrees to the northeast for Property description purposes.</i> | |
| General Setting | The general setting is commercial, industrial, and residential. | |

2.2 PROPERTY IMPROVEMENTS

| Property Improvements & Building / Land Description | |
|---|--|
| ITEM | |
| Property Description | <p>The Property consists of seven parcels totaling 0.87 acres that is divided by a railroad that is owned by the Napa Valley Wine Train LLC. Therefore, for description purposes, the Property will be referred to as the West Property to indicate the four parcels west of the railroad tracks and the East Property to indicate the three parcels east of the railroad tracks.</p> <p>The West Property consists of four parcels with a total square footage of 15,964 or 0.37 acres that are assigned the addresses of 803, 819, 823, and 825 1st Street. The West Property is a vacant commercial lot. There are no improvements.</p> <p>The East Property consists of three parcels with a total square footage of 22,183 square feet or 0.5 acres that are assigned the addresses of 711, 731, and 743 1st Street and 718 and 730 Water Street. The East Property is improved with a commercial building (731 1st Street) occupied by Trade Brewing, three two-bedroom and one-bathroom residential dwellings (711 1st Street, 718 Water Street, and 730 Water Street), a detached garage, and unpaved land (743 1st Street).</p> <p>731 1st Street is approximately 1,830 square feet, 711 1st Street is approximately 1,525 square feet, 718 Water Street is 730 Water Street is approximately 1,000 square feet, and the detached garage is approximately 350 square feet.</p> <p>Data Source(s) for Parcel Size: First American Title Company Property Profile</p> <p>Data Source(s) for Building Size(s): Site Reconnaissance</p> |
| Estimated Year of Construction | <p>Based on Sanborn Fire Insurance Maps, the current commercial and residential buildings appear to have existed onsite since 1886. The detached garage was added by the 1940s. In 1982, 731 1st Street was converted from a residential dwelling to commercial use.</p> <p>Data Source(s): Sanborn Fire Insurance Maps, City of Napa Building Department</p> |
| Improvement Description | <p>The buildings are wood-framed buildings with crawl spaces on raised concrete foundations due to the site being in a flood zone of the Napa River. 731 1st Street that is occupied by Trade Brewing consists of a taproom, a food preparation area, restroom, and storage areas. The three residential dwellings are two-bedroom / one-bathroom single-family residential dwellings with kitchens and storage areas. The detached garage is used for storage by the residents of 718 Water Street.</p> <p>See also appended photographs and site plot plan.</p> |
| Other Improvements & Features (including description of unimproved areas) | <p>None observed.</p> |

2.3 *PROPERTY OCCUPANTS & USE*

| Property Occupants & Use | |
|---|--|
| ITEM | |
| Present Occupant(s) and Detailed Description of Business Operation(s) | <p>The Property is improved with a commercial building, three residential dwellings, and a detached garage that are located on the East Property (711-743 1st Street and 718-730 Water Street). The West Property (803-825 1st Street) is a vacant commercial lot.</p> <p>The commercial building at 731 1st Street is occupied by Trade Brewing, a brewery and taproom. The three residential dwellings at 711 1st Street, 718 Water Street, and 730 Water Street are two-bedroom / one-bathroom single-family residential dwellings.</p> |

2.4 *MUNICIPAL SERVICES & UTILITIES*

| Municipal Services & Utilities | |
|---|---|
| ITEM | |
| Potable Water Supply | City of Napa |
| Natural Gas Utility Provider | Pacific Gas and Electric Company (PG&E) |
| Electrical Utility Provider | Pacific Gas and Electric Company (PG&E) |
| Sewage Disposal System | City of Napa |
| Solid Waste Disposal | Napa Recycling & Waste Services |
| Any Septic System, Cesspool, Seepage Pits | None observed |
| Private Water Well | None observed |
| Heating/Cooling System | Ground-mounted HVAC |

2.5 *PHYSICAL SETTING*

The Property is located within Napa Valley, approximately 50 feet north of the Napa River at an elevation of approximately 18 feet above mean sea level (amsl). Napa Valley is generally composed of younger alluvial deposits of Pleistocene to Recent age, underlain by older alluvial deposits. The younger alluvium consists of interbedded, unconsolidated gravel, sand, silt, clay, and peat to depths of up to 30 feet below ground surface (bgs). Groundwater based on groundwater monitoring data for Valley Auto Repair at 1046 McKinstry Street (approximately 120 feet to the north-northeast) identified groundwater at approximately 12 to 13 feet below ground surface (bgs) with a flow direction towards the south to southwest and to the west.

Sources:

Second Quarter 2008 Quarterly Groundwater Monitoring Report for 644 1st Street and 1046 McKinstry Street prepared by Bromley Consulting Services Inc. (BCS) dated may 28, 2008
http://geotracker.waterboards.ca.gov/esi/uploads/geo_report/6380661487/T0605522317.PDF

While groundwater flow direction at the Property cannot be confirmed without survey measurement of static groundwater level at triangulated points, it is expected to flow in the direction of surface topographical contour, or toward the wetland or nearest water body or discharge basin (percolation channel).

It is important to note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 PROPERTY RECONNAISSANCE**3.1 LIMITING CONDITIONS**

The information reported herein was obtained through sources deemed reliable, a visual site survey of areas readily observable, easily accessible or made accessible by the Property contact, and interviews with owners, agents, occupants, or other appropriate persons involved with the Property.

No disassembly of systems or building components or physical or invasive testing was performed. ODIC renders no opinion as to the Property condition at un-surveyed and/or inaccessible portions of the Property. ODIC relies completely on the information, whether written, graphic or verbal, provided by the Property contact or as shown on any documents reviewed or received from the Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. The observations in this *Report* are valid on the date of the survey. Note: Typically lenders have environmental policies where due diligence reports are valid for one year from the report date. However, such policies and standards can vary from each lender or *User*. For CERCLA landowner liability protection, Phase I ESA reports are valid for 180 days, per ASTM Standard Practice E1527-13.

3.2 PROPERTY RECONNAISSANCE

ODIC conducted interior and exterior observations of the Property with the intent to identify *releases* or *material threat* of future *releases* of *hazardous substances* or *petroleum products* to the *environment*. The site reconnaissance table below lists items *visually and/or physically observed*.

| Property Reconnaissance | |
|--|---------------------------|
| ITEM | |
| Processes involving Petroleum Products or Hazardous Substances | There were none observed. |
| Underground Storage Tanks (USTs) | There were none observed. |
| Aboveground Storage Tanks (ASTs) | There were none observed. |
| Fuel Islands / Dispensers, or any type of fueling system/operation | There were none observed. |
| Containers or Drums of Hazardous Materials and/or Petroleum Products related to the Property's operations/processes | There were none observed. |
| Unidentified Substance Containers: Other containers of suspect hazardous materials in drums, barrels, or other storage, or unlabeled/unidentified containers on site | There were none observed. |
| Stained or Corroded Surfaces / Stained Soil (paved or unpaved) | There were none observed. |
| Unusual areas of asphalt/cement patch or surface depressions including any possible boring locations | There were none observed. |
| Stockpiled soils, fill materials, or soil piles | There were none observed. |
| Stressed vegetation | There were none observed. |
| Any type of heavy equipment or machinery of environmental concern | There were none observed. |
| Electrical or hydraulic equipment or machinery of environmental concern | There were none observed. |
| Drains for machinery/equipment cleaning or flushing | There were none observed. |
| Evidence of onsite surface water impoundment, pits, dry wells or sensitive surface water features such as lagoons, ponds, and other water bodies | There were none observed. |
| Drains, sumps, wastewater treatment units, oil/water separators, clarifiers, catch basins, drip pads, or sumps | There were none observed. |

| Property Reconnaissance | |
|--|---------------------------|
| ITEM | |
| Any regulated surface-water discharges, illegal dumping, unauthorized surface runoff or discharge to potentially impact water bodies | There were none observed. |
| Storm water or surface-water drainage system having any abnormal accumulation of petroleum or chemical run-off or foreign materials, any unusual blockage of the storm-water control systems | There were none observed. |
| Pools of liquid such as standing surface water, pools or sumps containing liquids likely to be hazardous substances or petroleum products | There were none observed. |
| Odors (strong, pungent, or noxious odors and their sources) | There were none observed. |
| Septic systems, cesspools, seepage pits | There were none observed. |
| Wells (private water wells, irrigation wells, injection wells, abandoned wells, groundwater-monitoring wells, dry wells, septic wells, oil wells, gas wells, domestic water wells, vapor recovery wells or other-monitoring wells) | There were none observed. |
| Railroad tracks or spurs | There were none observed. |
| Visual evidence of improper handling/disposal of solid wastes | There were none observed. |

3.3 Detailed Description of Site Reconnaissance and Environmental Conditions The Property is currently developed with a former residential building converted into a commercial building that is occupied by Trade Brewing at 731 1st Street; three residential dwellings at 711 1st Street, 718 Water Street, and 730 Water Street; and a detached garage at the East Property. The West Property is an unpaved lot. No Recognized Environmental Conditions (RECs) were observed during site reconnaissance.

3.4 CURRENT USES OF ADJACENT PROPERTIES

For the scope of this assessment, properties are defined and categorized based upon their physical proximity to the Property. An adjoining property is defined as any real property or properties in which the border is contiguous or partially contiguous with that of the Property, or that would be contiguous or partially contiguous with that of the Property but for a street, road, or other public thoroughfare separating them.

| Adjacent Properties West Property: 803-825 1st Street | |
|---|---|
| ITEM | |
| North | 1 st Street is to the north followed by an office building for the Napa County Flood Control at 804 1 st Street. |
| South | Vacant land that is owned by the Napa Valley Wine Train LLC is to the south followed by the Napa River. |
| West | Soscol Avenue is to the west followed by China Point Park. |
| East | Railroad tracks owned by the Napa Valley Wine Train LLC are to the east followed by the Trade Brewing and a residential dwelling of the East Property at 731 1 st Street and 730 Water Street. |
| Northwest | The intersection of 1 st Street and Soscol Avenue is to the northwest followed by the China Point Park. |
| Northeast | Railroad tracks are to the northeast followed by Forno Piombo, a wood fire oven business at 728 1 st Street. |
| Southwest | The Soscol Avenue bridge and Napa River are to the southwest. |
| Southeast | Railroad tracks are to the southeast followed by Water Street and a parking lot for the Napa County Flood District at 876 Water Street. |

| Adjacent Properties | |
|--|---|
| East Property: 711-743 1st Street and 718-730 Water Street | |
| ITEM | |
| North | 1 st Street is to the north followed by by Forno Piombo Woof Fire Ovens at 728 1 st Street and a multi-tenant retail building at 708-714 1 st Street that is occupied by The Wine Thief, Voo Doo's Hair Salon, Mark Herold Wines and other business. |
| South | Water Street is to the south followed by a parking lot for the Napa County Flood District at 876 Water Street. |
| West | Railroad tracks owned by the Napa Valley Wine Train LLC are to the west followed by a vacant lot at 803-825 1 st Street that is the West Property. |
| East | A residential dwelling is to the east at 903 McKinstry Street. |
| Northwest | Railroad tracks are to the northwest followed by an office building for the Napa County Flood Control at 804 1 st Street. |
| Northeast | 1 st Street is to the northeast followed by the multi-tenant retail building at 708-714 1 st Street. |
| Southwest | Vacant land that is owned by the Napa Valley Wine Train LLC is to the southwest followed by the Napa River. To the south-southwest is a railroad bridge. |
| Southeast | Water Street is to the southeast followed by the County of Napa Corporate Yard at 933 Water Street. |

3.5 NON-SCOPE (NON-ASTM) CONSIDERATIONS

Evaluation of Non-Scope or Non-CERCLA items, including those addressed in Section 3.4 of this *Report*, is not required nor relevant for compliance with the AAI Rule or ASTM Standard Practice E1527-13. Inclusion of any non-scope item in a Phase I Environmental Site Assessment report is entirely within the discretion of the *User* based on its own risk tolerance. Non-Scope Consideration should not be construed as requiring the inclusion of any non-scope issues in a Phase I Environmental Site Assessment report.

Any additional services contracted for between the *User* and ODIC Environmental including a broader scope of assessment, more detailed conclusions, liability/risk evaluations, recommendation for Phase II testing or other assessment activities, remediation techniques, etc., are beyond the scope of Standard Practice E1527-13, are not part of this *Report*, and should only be included in the *Report* if so specified in the terms of engagement between the *User* and ODIC. Such additional services may include *business environmental risk* issues not included within the scope of this practice (ASTM Standard Practice E1527-13). No implication is intended as to the relative importance of inquiry into such non-scope considerations, and this list of non-scope considerations is not intended to be all-inclusive.

There may be environmental issues or conditions at a *Property* that parties may wish to assess in connection with *commercial real estate* that are outside the scope of this practice (the non-scope considerations). As noted by the legal analysis in Appendix X1 of ASTM Standard Practice E1527-13, some substances may be present on the *Property* in quantities and under conditions that may lead to contamination of the *property* or of nearby properties but are not included in CERCLA's definition of *hazardous substances* (42 U.S.C. §9601(14)) or do not otherwise present potential CERCLA liability. In any case, they are beyond the scope of this practice.

Whether or not a *User* elects to inquire into non-scope considerations in connection with this practice or any other *environmental site assessment*, no assessment of such non-scope considerations is required for appropriate inquiry as defined by this practice.

| NON-SCOPE, NON-CERCLA ITEMS | |
|--|--|
| ITEM | |
| Suspect asbestos-containing building materials (ACBM) in damaged condition if the structure is built prior to 1978 | <p>Since an asbestos survey is not included in the scope of services for this Phase I ESA, ODIC did not test suspect asbestos-containing building materials (ACBM) at the Property. However, because improvements at the Property were constructed before 1978, the presence of ACBM is likely.</p> <p>It is important to note that state and federal laws impose special requirements for handling these materials, especially in the event of remodeling or demolition that may impact these materials. Prior to any remodeling or demolition, the Property owner must have properly certified personnel test all suspect ACBM to be disturbed by the work. If ACBM are identified and are subject to disturbance, the Property owner must have properly certified personnel prepare and implement work procedures and associated Operations and Maintenance Plans, as applicable. The Property owner/occupant should assure compliance with all applicable regulations, notably AHERA, OSHA, and the General Construction Standard (as applicable).</p> |
| Suspect lead-based paint (LBP) in damaged condition if the structure is residential and was built prior to 1978 | <p>Since a lead-based paint survey is not included in the scope of services for this Phase I ESA, ODIC did not test suspect lead-based paint (LBP) at the Property. However, because improvements at the Property were constructed before 1978, the presence of LBP is likely.</p> <p>It is important to note that state and federal laws impose special requirements for handling these materials, especially in the event of remodeling or demolition that may impact these materials. Prior to any remodeling or demolition, the Property owner must have a certified/licensed LBP consultant test all suspect LBP to be disturbed by the work. If LBP are identified and are subject to disturbance, the Property owner must have properly certified personnel prepare and implement work procedures and associated Operations and Maintenance Plans, as applicable. The Property owner/occupant should assure compliance with all applicable regulations, notably OSHA, and the General Construction Standard (as applicable).</p> |
| Lead in drinking water (LIW) | <p>Since a lead in drinking water survey is not included in the scope of services for this Phase I Environmental Site Assessment, ODIC did not test drinking water at the Property for lead content.</p> <p>The major source of LIW is leaching of lead from household plumbing materials or water service lines used to bring water from the main to the building. Lead can leach into drinking water through contact with the plumbing, solder, fixtures and faucets (brass), and fittings. The amount of lead in drinking water will be influenced by the type and amount of minerals in the water, how long the water stays in the pipes, the amount of wear in the pipes, the water's acidity and its temperature.</p> |

| NON-SCOPE, NON-CERCLA ITEMS | |
|--|---|
| ITEM | |
| Radon | <p>Since a radon survey is not included in the scope of services for this Phase I ESA, ODIC did not test for radon at the Property.</p> <p>Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.</p> <p>A review of the EPA's Map of Radon Zones indicates that Napa County falls within Zone 3, a zone of low radon potential. Counties located within Zone 3 have a predicted average indoor radon screening level less than 2 picocuries per liter (pCi/L). A radon survey was not included in the current scope of services.</p> <p>Source: https://www.epa.gov/radon/find-information-about-local-radon-zones-and-radon-programs</p> <p>It should be noted that site-specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the Property radon levels.</p> |
| Urea Formaldehyde | <p>A UFFI survey was not included in the scope of services for this Phase I ESA. The sale and installation of Urea Formaldehyde Foam Insulation (UFFI) as thermal insulation began in approximately 1970, and continued until December 1980 when it was banned under the federal <i>Hazardous Products Act</i>. UFFI was installed in both new and existing buildings during this period. UFFI was not commonly used in industrial or commercial buildings.</p> |
| Suspect PCB-oil concern with hydraulic equipment, ballasts, transformers, etc. | <p>Since a PCB survey is not included in the scope of services for this Phase I ESA, ODIC did not test for PCBs at the Property.</p> |
| Wetlands, creeks, swale, pits, ponds, lagoons, or any other water bodies | <p>A wetland is defined as areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands provide a number of economically and environmentally important functions such as flood control, water quality protection, groundwater recharge, spawning areas for commercially important fish, and wildlife habitat.</p> <p>Wetlands are evaluated using three indicators: hydrology, hydrophytic vegetation, and hydric soils. Section 404 of the Clean Water Act requires a permit before dredged or fill material may be discharged into regulated wetlands (known as Jurisdictional Wetlands). The Army Corps of Engineers has primary responsibility for making wetlands jurisdictional determinations and issuing wetlands permits. A number of activities are authorized through the use of nationwide permits.</p> <p>A wetland study or survey is not included in the current scope of services for this Phase I ESA. However, based on a review of the EDR Radius Map Report, the site is not within a mapped National Wetland Inventory location.</p> |

| NON-SCOPE, NON-CERCLA ITEMS | |
|---|---|
| ITEM | |
| Visual evidence of mold problems from wet areas, roof leaks, moisture around air conditioning or plumbing units | Since a mold/microbial matter survey is not included in the scope of services for this Phase I ESA, ODIC did not test for mold/microbial matter at the Property. |
| Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment (unusual smells, noxious odors, or visual emissions, air emission stacks), excluding impacts to indoor air from releases of hazardous substances into the environment | <p>Since indoor air quality testing is not included in the scope of services for this Phase I ESA, ODIC did not conduct indoor air quality testing at the Property.</p> <p>There are many sources of indoor air pollution. These include combustion sources such as oil, gas, kerosene, coal, wood, tobacco products, asbestos-containing materials, wet or damp carpet, formaldehyde, certain pressed wood products, cleaning and maintenance chemicals, and pesticides. EPA estimates that indoor levels of air pollutants can be two to five times higher, and occasionally 100 times higher, than outdoor levels. In general, EPA does not regulate indoor air quality except to the extent that indoor air impacts are caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).</p> |
| Flood Zone | <p>The Federal Emergency Management Agency Flood Insurance Rate Map is typically used to determine if the Property is located within a flood zone. Such evaluation is not included in the scope of work for this Phase I ESA.</p> <p>However, it appears that the Property is within a flood zone.</p> |
| Methane Gas | <p>Since a methane gas survey is not included in the scope of services for this Phase I ESA, ODIC did not test for methane gas at the Property.</p> <p>In response to concern regarding the potential for methane accumulation beneath buildings, and potential methane intrusion into buildings, some cities or regulatory oversight agencies have established methane zones and/or methane buffer zones based on the proximity to oil wells, landfills, or naturally occurring methane deposits.</p> <p>A methane risk assessment is not included in the scope of work for this Phase I ESA.</p> |

| NON-SCOPE, NON-CERCLA ITEMS | |
|---|--|
| ITEM | |
| <p>Other non-scope considerations discussed in Appendix X1 and Appendix X5 of ASTM Standard Practice E1527-13</p> | <p>No implication is intended as to the relative importance of inquiry into such non-scope considerations, and this list of non-scope considerations is not intended to be all-inclusive. These items are not included in the current scope of services for this Phase I ESA.</p> <p><i>Endangered Species Act</i>—Under the Endangered Species Act (ESA), the government protects endangered and threatened plants and animals (listed species) and their habitats. The presence of listed species can restrict use of the Property to ensure that the proposed activities do not adversely affect endangered or threatened species as well as their critical habitats. This includes <i>Biological agents, Cultural and historical resources, and Ecological resources</i>.</p> <p><i>Compliance with AULs</i>—Parties who wish to qualify for one of the LLPs will need to know whether they are in compliance with AULs, including land use restrictions that were relied upon in connection with a response action. A determination of compliance with AULs is beyond the scope of ASTM Standard Practice E1527-13.</p> <p><i>Regulatory Compliance (Includes Health and Safety and Industrial Hygiene)</i>—Properties used for industrial, commercial and even residential purposes are frequently subject to a panoply of environmental laws and regulations that relate to many aspects of operations conducted at the Property. In the context of a property transaction, noncompliance with environmental laws and regulations may create a material risk of financial loss for both building operators and owners of the properties.</p> <p><i>Potential Effects of Noncompliance</i>—Depending on the circumstances, noncompliance with various regulatory requirements could result in material costs to owners and operators of industrial, commercial or residential properties, including fines or other monetary penalties, injunctions or other equitable relief that slows or eliminates productivity, and could result in increased transaction costs associated with defending claims of noncompliance. Furthermore, even in the absence of administrative or legal enforcement proceedings, the costs to bring facilities into compliance with applicable regulatory requirements could be material in some circumstances.</p> |

4.0 PROPERTY AND VICINITY HISTORY

The objective of consulting historical sources is to develop a history of the previous uses of the Property and surrounding area, in order to help identify the likelihood of past uses having led to Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs) in connection with the Property. ODIC exercises professional judgment and consider the possible *releases* that might have occurred at a Property in light of the historical uses and, in concert with other relevant information gathered as part of the Phase I process, to use this information to assist in identifying RECs, CRECs, and/or HRECs in connection with the Property. Historical Records Search was conducted for the Property in conformance with the scope and limitations of ASTM Standard Practice E1527-13.

4.1 PREVIOUS ENVIRONMENTAL REPORTS

Phase I Environmental Site Assessment (ESA) for 730 Water Street and 731 1st Street, ODIC Environmental – January 29, 2014

ODIC reviewed the 2014 ESA report to determine the Property was occupied by a residential dwelling at 730 Water Street and Adam’s Cleaners at 731 1st Street. A Columbia-model dry cleaning machine and drums of perchloroethylene (PCE) were identified at Adam’s Cleaners. The owner of Adam’s Cleaners, Mr. Adam Chebl, was interviewed at that time and stated that the previous occupant was a seamstress and that in 2003, he installed the PCE solvent dry cleaning machine.

| | |
|---|--|
| View of Adam’s Cleaners in 2014 | Interior of Adam’s Cleaners |
|  |  |
| Columbia-model Dry Cleaning Machine | 55-gallon drum of PCE |
|  |  |

Since 731 1st Street was a dry cleaners at the time of site reconnaissance, and was likely a historical dry cleaners, ODIC stated that that due to the shallow groundwater in the site vicinity and the potential for vapor intrusion due to the potential soil and soil vapor contamination associated with dry cleaners, a subsurface investigation should be conducted.

Phase II Investigation Report for Adams Cleaners – BSK Associates, March 14, 2014

Based on ODIC's Phase II recommendation, BSK Associates conducted a targeted Phase II Investigation Report for Soil and Groundwater at Adam's Cleaners. BSK advanced two borings, B1 and B2, outside the buildings because interior access was not granted for their subsurface investigation. These locations were selected because they were adjacent to the sanitary sewer line cleanout leaving the dry cleaning business. Soil samples were collected at depths of 5, 7, and 10 feet below ground surface (bgs). Groundwater was encountered around 11 and 13 feet bgs and groundwater samples were collected at 10 feet bgs for both borings. Soil and groundwater samples did not identify any halogenated solvents, specifically perchloroethylene (PCE) and trichloroethylene (TCE). BSK stated that based on their site observations and analytical results of soil and groundwater samples, no evidence of contamination from the former or existing dry cleaning operations was discovered.

ODIC's Opinion

While no soil or groundwater samples from BSK's Phase II Report identified contaminants of concern, since no borings were advanced inside the dry cleaning building, ODIC believes that the potential of soil, groundwater, and soil vapor contamination remains onsite, specifically below the building. Moreover, groundwater in the site vicinity flows towards the southwest and no borings were advanced down-gradient of the building. Therefore, ODIC believes a potential human health risk from the former dry cleaners remains.

Boring Map – BSK Associates

4.2 SANBORN MAP COMPANY FIRE INSURANCE MAPS

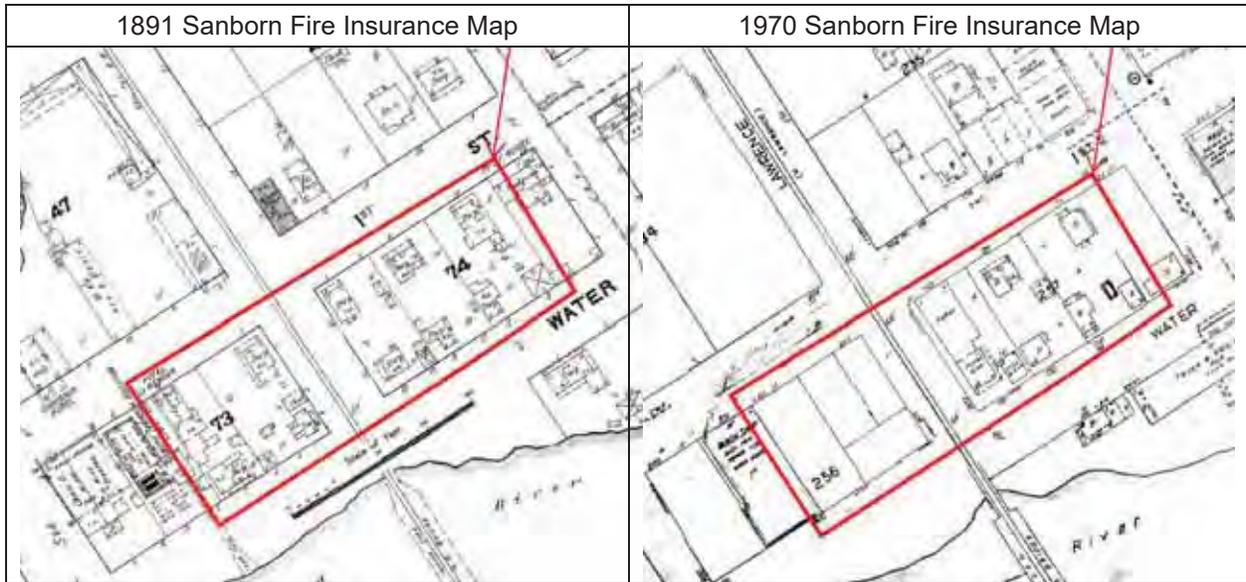

Sanborn Map Company maps were created for insurance underwriters from 1867 to present, and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks that may have been on a particular property. In 1996, the entire Sanborn Map Company collection was acquired by Environmental Data Resources, Inc. (EDR). ODIC subcontracted with EDR to provide copies of Sanborn Map Company maps, if available, for the Property and vicinity.

ODIC reviewed Sanborn Map Company fire insurance maps supplied by EDR. A summary of observations is provided below:

| Historical Sanborn Fire Insurance Maps | |
|--|--|
| YEAR | DESCRIPTION |
| 1886 | Property: The West Property is developed with four residential dwellings and storage sheds. The East Property is developed with six residential dwellings and storage sheds. The four current building, the three residential dwellings and Trade Brewing are developed. |
| | Adjacent North: The property to the north is developed with A. Wagner’s wine cellar and a mixed-use commercial and residential building with a grocery store and dwelling west of the railroad tracks. A blacksmith and wagon shop is developed to the north, east of the railroad tracks. |
| | Adjacent South: Water Street is to the south followed by Napa White Laundry and the Napa River. |
| | Adjacent West: The property to the west is developed with a residential dwelling. |
| | Adjacent East: The property to the east is developed with a building that is labeled with a saloon and kitchen. |
| 1891, 1901 | Property: The West Property is developed with the Hotel Di Genova at the west side, three residential dwellings, and storage sheds. The East Property remains developed with six residential dwellings and storage sheds. |
| | Adjacent North: The property to the north is developed with a hay and grain warehouse and a grocery store with a saloon west of the railroad tracks. A blacksmith and wagon shop and three residential dwellings are developed to the north, east of the railroad tracks. |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. |
| | Adjacent West: The property to the west is developed with a Thomson Houston Light Company facility with a coal house and tram way. |
| | Adjacent East: The property to the east remains developed with a building that is labeled as a saloon. |
| 1910 | Property: The West Property is developed with a lodging building with a saloon at the west side, four residential dwellings, and storage sheds. The East Property is developed with five residential dwelling and storage sheds. |
| | Adjacent North: The hay and grain warehouse has been removed and the grocery store has been converted into the Roma Hotel with a saloon west of the railroad tracks. The blacksmith and wagon shop and three residential dwellings remain to the north, east of the railroad tracks. |
| | Adjacent South: Water Street is to the south followed by two residential dwellings and the Napa River. |
| | Adjacent West: The property to the west is now the Napa Pump & Manufacturing Company with a machine shop and a foundry. |
| | Adjacent East: The property to the east is now a dwelling. |
| 1924 | The Property and adjacent properties remain relatively unchanged from the previous Sanborn Fire Insurance map. |
| 1945 | Property: The West Property remains developed with a lodging building with a saloon at the west side, four residential dwellings, and storage sheds. The East Property is |

| YEAR | DESCRIPTION |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. |
| | Adjacent West: The property to the west remains a machine shop. |
| | Adjacent East: The property to the east is now developed with one residential dwelling. |
| | Adjacent Southeast: The current building to the southeast remains a truck and equipment repair. |

THE 1891 SANBORN FIRE INSURANCE MAP (SANBORN) DEPICTS THE CURRENT FOUR BUILDINGS AT THE EASTERN PROPERTY.

ODIC reviewed aerial photographs supplied by the EDR Aerial Photo Decade Package (1947-2016) and Google Earth (2008, 2009, and 2018). A summary of observations is provided below:

| Historical Aerial Photographs | |
|-------------------------------|--|
| YEAR | DESCRIPTION |
| 1947 | Property: The Property is developed with five buildings and storage sheds at the West Property. The East Property is developed with a commercial building, the four current buildings, and storage sheds. |
| | Adjacent North: From west to the east, the property to the north is developed with two commercial buildings, a residential dwelling and a retail building. |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. |
| | Adjacent West: The property to the west is developed with a commercial building. |
| | Adjacent East: The property to the east is developed with two residential dwellings. |
| 1958 | Property: The West Property is developed with three residential dwellings and a detached garage. The East Property remains developed with a commercial building, the four current buildings, and the current detached garage. |
| | Adjacent North: From west to the east, the property to the north remains developed with two commercial buildings, a residential dwelling and a retail building. |

| Historical Aerial Photographs | |
|-------------------------------|---|
| YEAR | DESCRIPTION |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. A storage building is developed to the southeast. |
| | Adjacent West: The property to the west remains developed with a commercial building. |
| | Adjacent East: The property to the east remains developed with two residential dwellings. |
| 1968 | Property: The West Property is now a vacant lot. The East Property remains developed with a commercial building, the four current buildings, and the current detached garage. |
| | Adjacent North: The commercial building to the north is now a vacant lot. North-adjacent properties east of the railroad tracks are developed with a residential dwelling and commercial building. |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. The current light industrial building is developed to the southeast. |
| | Adjacent West: The property to the west remains developed with a commercial building. |
| | Adjacent East: The property to the east remains developed with two residential dwellings. |
| 1973 | The Property and adjacent properties remain relatively unchanged from the previous photograph. |
| 1982 to 2008 | Property: The West Property remains a vacant lot. The East Property remains developed with a commercial building, the four current buildings, and the current detached garage. |
| | Adjacent North: The Napa County Flood Control District building is developed to the north. The north-adjacent properties east of the railroad tracks remain developed with a residential dwelling and commercial building. |
| | Adjacent South: Water Street is to the south followed by a residential dwelling and the Napa River. The current light industrial building remains to the southeast. |
| | Adjacent West: The property to the west is now developed with Soscol Avenue. The Soscol Avenue bridge is developed to the southwest. West of Soscol Avenue is the China Point Park. |
| | Adjacent East: The property to the east is developed with a residential dwelling. |
| 2009, 2010 | Property: The West Property remains a vacant lot. The commercial building at the East Property has been demolished. The four current buildings and the current detached garage remain unchanged. |
| | Adjacent North: The Napa County Flood Control District building remains to the north. The north-adjacent properties east of the railroad tracks remain developed with a residential dwelling and commercial building. |
| | Adjacent South: Water Street is to the south followed by a parking lot and the Napa River. The current light industrial building remains to the southeast. |
| | Adjacent West: The property to the west remains developed with Soscol Avenue. West of Soscol Avenue is the China Point Park. |
| | Adjacent East: The property to the east remains developed with a residential dwelling. |
| 2011 | Property: The West Property remains a vacant lot. The East Property remains developed with the four current buildings and detached garage. |
| | Adjacent North: The Napa County Flood Control District building remains to the north. The north-adjacent properties east of the railroad tracks remain developed with a residential dwelling and commercial building. |
| | Adjacent South: Water Street is to the south followed by a parking lot and the Napa River. The current light industrial building remains to the southeast. The railroad bridge has been redeveloped and an additional railroad spur has been added to the railroad tracks that bisect the Property. |
| | Adjacent West: The property to the west remains developed with Soscol Avenue. West of Soscol Avenue is the China Point Park. |
| | Adjacent East: The property to the east remains developed with a residential dwelling. |
| 2016 | The Property and adjacent properties remain relatively unchanged from the previous photograph. |

| 1942 | Goetze Machine Shop (831 1 st Street), PG&E Sub Station (843 1 st Street) |
| 1947 | Bert Williams & Sons Auto Parts (831 1 st Street) |
| 1954 | Bert Williams & Sons Auto Parts (831 1 st Street) |
| 1965 | Valet Cleaners & Tailors (714 1 st Street), Bert Williams & Sons Auto Parts, Williams Bearing Supply (831 1 st Street) |
| 1970 | Valet Cleaners & Tailors (714 1 st Street), Bert Williams & Sons Auto Parts, Williams Bearing Supply (831 1 st Street) |
| 1975 | Valet Cleaners & Tailors (714 1 st Street), Bert Williams & Sons Auto Parts, Williams Bearing Supply (831 1 st Street) |

For discussion of nearby properties of environmental concern, if any, refer to Sections 5.3 and 5.4.

4.5 CITY/COUNTY BUILDING DEPARTMENT, ZONING/LAND USE, PROPERTY TAX RECORDS, PROFILES

Building Department Records:

ODIC reviewed building records from the City of Napa Building Department. The original building permit was not identified. A summary of the building records is provided below:

| Building & Planning Department Records | |
|--|--|
| YEAR | DESCRIPTION |
| 1955 | Addition permit for Lombardo Hotel (819 1 st Street) Owner: A. Daros |
| 1957 | Alterations to an existing store (743 1 st Street) Owner: Roy Griffin |
| 1959 | Re-roofing permit (743 1 st Street) Owner: John Tamborini |
| 1960 | Addition to an existing store (743 1 st Street) Owner: John Tamborini |
| 1965 | Permit to demolish a residential dwelling (803 1 st Street) Owner: Joe DeSilva |
| 1967 | Permit to demolish Lombardo Hotel (811-819 1 st Street) Owner: Joe DeSilva |
| 1975 | Permit for a furniture store (743 1 st Street) Owner: Roy Griffin |
| 1977 | Permit for Western Tours, Offices (743 1 st Street) Owner: Norman Springer |

| | |
|------|--|
| 1981 | Re-roofing permit for a single family dwelling (730 Water Street) Owner: Dorothy Mirani |
| 1982 | Repair foundation for residential dwelling (731 1 st Street) Owner: Guadagni & Thompson |
| 1983 | Permit to remodel a residential dwelling to commercial use (731 1 st Street) Owner: Al Guadagni |
| 2000 | Electrical permit for residential dwelling (711 1 st Street) Owner: Alvin Guadagni |
| 2003 | Re-roofing permit for residential dwelling (711 1 st Street) Owner: Raymond Guadagni |
| 2003 | Permit to add a boiler room for Adam's Cleaners (731 1 st Street) Owner: Adam Chebl |
| 2004 | Permit for Adam's Cleaners (731 1 st Street) Owner: Adam Chebl |
| 2005 | Permit for Steve Silva Plumbing Showroom (743 1 st Street) Owner: Napa County Flood Control |
| 2009 | Permit to demolish a single family dwelling (743 1 st Street) Owner: Napa County Flood Control |
| 2014 | Replace foundation for a residential dwelling (718 Water Street) Owner: Raymond Guadagni |
| 2016 | Siding repairs and re-roofing permit for a commercial building (731 1 st Street) Owner: Foxbow Development LLC |
| 2017 | Permit for a 1,213-square-foot beer tasting room (731 1 st Street) Owner: Glen Loban |

Property Profile:

ODIC obtained Property information from the First American Title Company property profiles:

West Property
15,964 SF – 0.37 Acres

- Current Property Owner(s): Pt-Five Investments Lp
- Property Address(es): 825 1st Street, Napa, CA 94559
- APN#: 003-235-003-000
- Lot Size: 0.156 acres / 6,807 square feet

4.6 HISTORICAL TOPOGRAPHIC MAPS

Development history of the Property and surrounding area was researched using historical 7.5 Minute USGS topographic maps provided by EDR from 1902 to 2012. No features of environmental concern were identified.

4.7 OIL & GAS MAPS

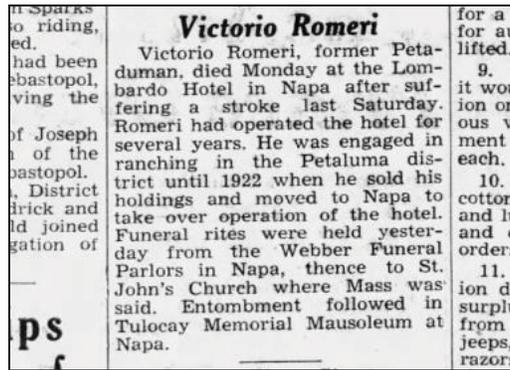

ODIC reviewed California Department of Conservation, Division of Oil, Gas & Geothermal Resources (DOGGR) maps for the Property and immediate vicinity via the DOGGR Online Mapping System (DOMS), but found no active or abandoned oil and/or gas wells on the Property or in the immediate vicinity.

Source: <https://maps.conservation.ca.gov/doggr/wellfinder/#openModal>

4.8 OTHER HISTORICAL RECORDS

This category includes, but is not limited to: miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current owners or occupants of neighboring properties, or records in the files and/or personal knowledge of the Property owner and/or occupants.

According to an obituary from The Press Democrat newspaper on Friday, August 17, 1945, Mr. Victorio Romeri died on August 13, 1945 at the Lombardo Hotel in Napa. It stated that Mr. Romeri moved to Napa in 1922 to take over the hotel. The Lombardo Hotel was located at the Western Property at 819 1st Street. Mr. Romeri was identified in a 1942 city directory listing from EDR.

Source: <https://www.newspapers.com/image/265116466/?terms=lombardo%2Bhotel%2Bnapa>

ODIC researched Google Maps Street View and identified 731 1st Street as being occupied by Adam's Cleaners in 2007. Below is the image. Adam's Cleaners occupied the Property until at least early 2014 based on ODIC's previous Phase I Environmental Site Assessment dated January 29, 2014. This building is currently occupied by Trade Brewing.

5.0 STANDARD ENVIRONMENTAL RECORDS RESEARCH

5.1 PROCEDURE

The most current databases sources maintained by state and federal offices were provided by governmental record search database suppliers, such as Environmental Data Resources (EDR). For definitions of database acronyms, review the database report in Appendix C and/or refer to ASTM Standard Practice E1527-13, Sections 3.3 and 8.2.

Database sources maintained by local offices were obtained via records requests. Databases were searched for properties with reported environmental listings within distances specified by ASTM Standard Practice E1527-13, either by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded “orphan” properties within the same zip code. The database report is included as an appendix to this *Report*. The database report may identify certain “orphan sites” which are those facilities that could not be mapped or geocoded due to inadequate address information. ODIC cannot be held liable for not correctly locating these orphan sites to determine their impact to the Property.

ASTM Standard Practice E1527-13 Sections 3.3 and 8.2 use terminology such as Leaking Storage Tank and Registered Storage Tank to refer to both Leaking Underground/Aboveground Storage Tanks and Underground/Aboveground Storage Tanks. For the purposes of this assessment, ODIC has used state-specific terminology to refer to Leaking Storage Tanks and/or other Registered Storage Tanks as generally defined by the state in which the Property is located.

5.2 PROPERTY LISTING(S)

The Property address of 731 1st (First) Street is identified in the RCRA-SQG, FINDS, NCDEH, DTSC HWTS, and EDR Historical Cleaners databases. EDR identified 731 1st Street as being Valet Cleaner & Tailor in 1986-1988, Ye Olde Valet Shoppe from 1989-1994, and Adam’s Cleaners from 2004-2013.

| 2012 | ADAMS CLEANERS | Drycleaning Plants, Except Rugs |
| 2013 | ADAMS CLEANERS | Drycleaning Plants, Except Rugs |

The RCRA-SQG listing from 1996 was for Ye Olde Valet Shoppe due to the business generating more than 100 and less than 1000 kilograms (kg) of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generating 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time. No additional information was available.

Ye Olde Valet Shoppe is identified in the Environmental Protection Agency's (EPA) Facility Index System (FINDS) database with a Registry ID #110001179260. No additional information was available. Adam's Cleaners is identified in the FINDS database with a Registry ID #110038078291. No additional information was available.

Adam's Cleaner is identified in the Napa County Division of Environmental Health (NCDEH) as operating a perchloroethylene (PCE) dry cleaning machine according to an undated Emergency Response Plan. Moreover, records revealed that Adam's Cleaners operated a perchloroethylene (PCE) dry cleaning machine from at least 2004 to 2014. The machine was identified as being located at the southeast portion of the building according to an Emergency Response Plan. An inspection report from 2006 stated that Adam's Cleaners used more than 55-gallons of hazardous materials. Additionally, a Notice of Violation was issued to Adam's Dry Cleaners on December 18, 2012 for not having hazardous waste containers that were clearly marked and not having an emergency response plan.

Adam's Cleaners is identified in the California Department of Substances Control (DTSC) Hazardous Waste Tracking System (HWTS) database. The DTSC HWTS database identified Adam's Cleaners as generating liquids with halogenated organic compounds / halogenated solvents from 2005 to 2014 ranging from 0.075 to 0.8 tons annually. This confirms that Adam's Cleaners operated an onsite dry cleaning machine. Moreover, in January 2014, ODIC conducted a previous Phase I when Adam's Cleaners was still in operation. During site reconnaissance at that time, perchloroethylene (PCE) in drums was identified. See Section 4.2 Previous Environmental Reports.

SEMS (Superfund Enterprise Management System) - Archive:

| LISTING | ADDRESS | DISTANCE |
|---------------------|---|---------------|
| PG&E Gas Plant Napa | 5 th Street Between Main and Brown | 1/4 – 1/2 SSW |

The PG&E Gas Plant Napa SEMS-ARCHIVE site also known as Napa Gas & Electric in the California Department of Toxic Substances Control (DTSC) ENVIROSTOR database, was a small coal gasification facility constructed by Napa Gas Works in about 1867 located approximately 1,400 feet to the south-southwest. The facility consisted of an office building, gas production building, a condensing/purifying building, a workshop, two storage sheds, and an aboveground gas storage tank. The gasification facility produced about 3,000 cubic feet of gas per day through the carbonation of coal. The gas was distributed through underground gas mains which lit city street lamps and served about 100 households. Operations ceased in 1889 and the facility was demolished by 1891. The Napa Mill Development Company acquired the Site in 1986 and planned to expand the existing commercial building. Subsurface sampling revealed that the contamination remains confined to the site and the site received certification with land-use restrictions on September 21, 2015. Therefore, this site is not assessed as an environmental concern for the Property.

5.4 SURROUNDING SITES: STATE AGENCY LISTINGS

| STATE ENVIRONMENTAL AGENCY LISTING(S) | | |
|---------------------------------------|---------------------------------|---|
| DATABASE | MINIMUM SEARCH DISTANCE (MILES) | PROPERTIES IDENTIFIED WITHIN SEARCH DISTANCE |
| State/Tribal Equivalent NPL | 1.0 | 1 |
| State/Tribal Equivalent CERCLIS | 0.5 | 4 |
| State/Tribal SWF/LF | 0.5 | 1 |
| State/Tribal Leaking Storage Tank | 0.5 | 68 <i>(EDR reported 79 LUST sites; 11 sites were duplicate listings)</i> |
| State/Tribal Registered Storage Tank | Adjoining Sites | 1 |
| State/Tribal IC/EC Registries | Adjoining Sites | 0 |
| State/Tribal Voluntary Cleanup Sites | 0.5 | 0 |
| State/Tribal Brownfield Sites | 0.5 | 2 |
| State/Tribal CPS (CA only) | 0.5 | 10 |
| Other State List | Adjoining Sites | 1 |

State/Tribal Equivalent NPL – RESPONSE:

| LISTING | ADDRESS | DISTANCE |
|---------------------|---|---------------|
| PG&E Gas Plant Napa | 5 th Street Between Main and Brown | 1/4 – 1/2 SSE |

The PG&E Gas Plant Napa NPL-RESPONSE site is cross-listed in the SEMS-ARCHIVE database. Refer to the SEMS-ARCHIVE database for detailed information.

State/Tribal Equivalent CERCLIS – ENVIROSTOR:

| LISTING | ADDRESS | DISTANCE |
|---------------------|---|---------------|
| Al's Auto Wrecking | 1274 McKinstry Street | 0 – 1/8 N |
| Bresciani Property | 750 Randeau Way | 1/4 – 1/2 NNW |
| PG&E Gas Plant Napa | 5 th Street Between Main and Brown | 1/4 – 1/2 SSW |
| The Chrome Shop | 739 8 th Street | 1/4 – 1/2 S |

The nearest ENVIROSTOR site, Al's Auto Wrecking, was approximately 500 feet to the north of the Property. It is currently undeveloped land that is part of the Oxbow Commons north of the Oxbow Public Market and south of The Westin Verasa Napa hotel. This site had subsurface contamination due to an underground storage tank and auto dismantling operations. After remedial activities, site closure was issued by the Regional Water Quality Control Board on October 2, 2001 and the Napa County Flood Control & Water Conservation District acquired the site as part of flood control activities. Therefore, this site is not assessed as an environmental concern for the Property.

Source: http://geotracker.waterboards.ca.gov/profile_report?global_id=T0605500197

The Bresciani Property at 750 Randeau Way, is approximately 1,600 feet to the northwest of the Property. This site had two 12,000-gallon gasoline underground storage tanks (USTs), one 10,000-gallon gasoline UST, and one 10,000-gallon diesel UST that were removed in 1986 and had a release to the subsurface soil and groundwater. After groundwater monitoring and remedial activities, the site received case closure from the Regional Water Quality Control Board on March 31, 1993. This site was certified by the California Department of Toxic Substances Control (DTSC) on May 10, 1994. Therefore, this site is not assessed to pose a significant environmental risk to the Property.

Source(s): https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=28290002

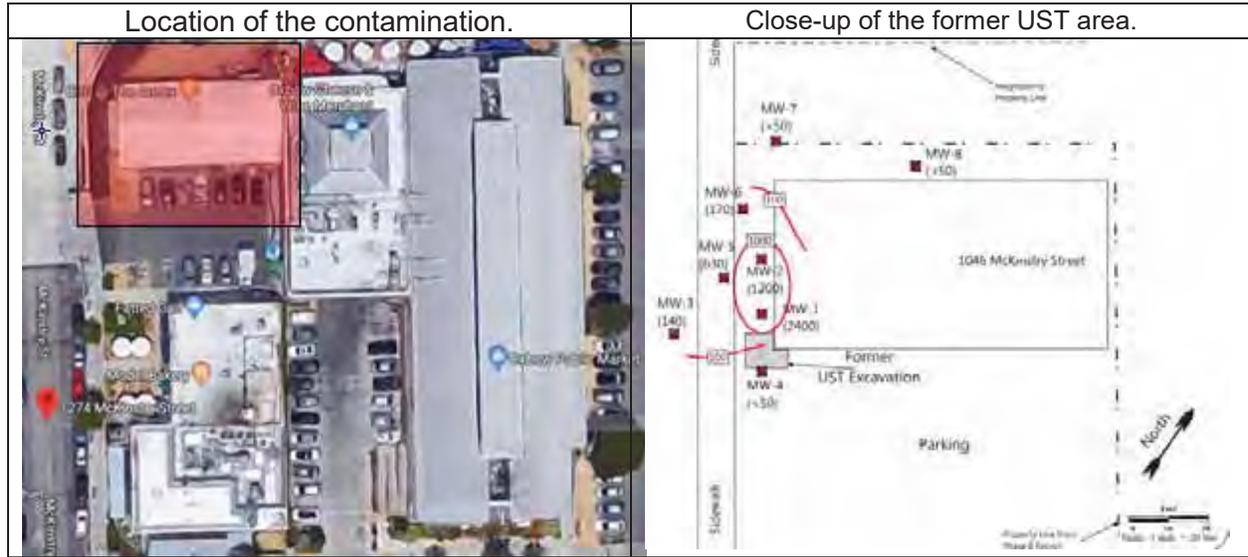

The remaining ENVIROSTOR sites are not assessed to pose a significant environmental risk to the Property based on their respective horizontal distances from the Property.

State/Tribal LST (Leaking Storage Tank) – LUST (Leaking Underground Storage Tank):

Listed below are the four nearest LUST sites to the Property. For a complete listing, refer to the EDR Radius Map Report appended to this report.

| LISTING | STATUS | ADDRESS | DISTANCE |
|--------------------|--------|----------------------------|-------------|
| Valley Auto Repair | Closed | 644 1 st Street | 0 – 1/8 NE |
| Napa County Yard | Closed | 933 Water Street | 0 – 1/8 SE |
| Al's Auto Wrecking | Closed | 1274 McKinstry Street | 0 – 1/8 N |
| Riverside Service | Closed | 967 1 st Street | 0 – 1/8 WSW |

The nearest LUST site, Valley Auto Repair and Valley Tire and Brake at 644 1st Street were located at the northeast corner of the intersection of 1st Street and McKinstry Street. The site had a former underground storage tank that was removed in 1979. In 2006, a subsurface investigation revealed that there had been a release to the subsurface soil and groundwater of gasoline and diesel. Eight groundwater monitoring wells were installed and sampled and found that the contamination was concentrated to within the site boundaries with low to non-detect concentrations of benzene and the site received case closure on August 28, 2011. Groundwater was identified as flowing towards the southwest to the Napa River. Therefore, this site is not assessed as an environmental concern for the Property.

Source: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0605522317

The Napa County Corporate Yard at 933 Water Street is identified as a case closed LUST site that received case closure on October 24, 2003 for an unauthorized release identified in 1990. Moreover, since groundwater in the site vicinity flows to the southwest, which is a direction that is away from the Property, this site is not assessed to pose a significant environmental risk to the Property.

Source: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0605500202

The remaining LUST sites are not assessed to pose a significant environmental risk to the Property based on their respective horizontal distances from the Property and/or their case closed status.

State/Tribal RST (Registered Storage Tank) – UST (Underground Storage Tank):

| LISTING | ADDRESS | DISTANCE |
|----------------------------|------------------|------------|
| Napa County Corporate Yard | 933 Water Street | 0 – 1/8 SE |

The southeast-adjacent Napa County Corporate Yard is identified as a historical UST site that operated three USTs: a 10,000-gallon gasoline UST, a 10,000-gallon diesel UST, and a 2,000-gallon diesel UST. This site is also listed as a case closed LUST site. Therefore, this site is not assessed as an environmental concern for the Property.

Source: <http://geotracker.waterboards.ca.gov/ustpdfs/pdf/0002B05A.pdf>

State/Tribal Brownfields Sites:

| LISTING | ADDRESS | DISTANCE |
|-----------------------------|-----------------------------|---------------|
| Former Slinsen Construction | 1314 McKinstry Street | 1/8 – 1/4 N |
| The Inn at Town Center | 1400 1 st Street | 1/4 – 1/2 WSW |

The Former Slinsen Construction CPS site is approximately 1,300 feet to the north of the Property. It is cross-listed in the CPS database as a case closed site. Based on its horizontal distance, this site is not assessed to pose a significant environmental risk to the Property.

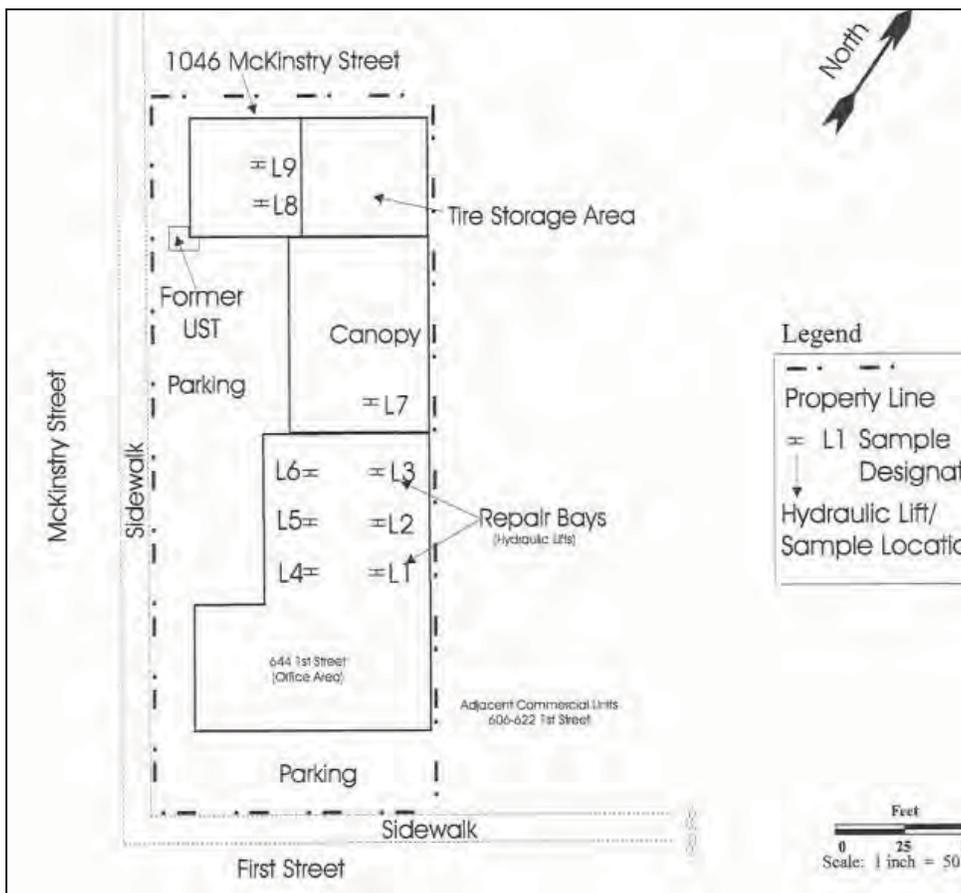

The Inn at Town Center CPS site is over 2,000 feet to the southwest of the Property. It is cross-listed in the CPS database as a case closed site. Based on its horizontal distance, this site is not assessed to pose a significant environmental risk to the Property.

Cleanup Program Sites (CPS):

Listed below are the five nearest CPS sites to the Property. For a complete listing, refer to the EDR Radius Map Report appended to this report.

| LISTING | STATUS | ADDRESS | DISTANCE |
|--------------------------|--------|-----------------------------|---------------|
| Valley Tire and Brake | Closed | 644 1 st Street | 0 – 1/8 NNE |
| Napa River / Napa Creek | Closed | 1001 2 nd Street | 1/8 – 1/4 SW |
| Mr. Howard Nunn | Closed | 826-828 Brown Street | 1/8 – 1/4 SW |
| Former Tidewater Station | Closed | 965 3 rd Street | 1/8 – 1/4 SSW |
| Slinsen Construction | Closed | 1314 McKinstry Street | 1/8 – 1/4 N |

The nearest CPS site, the former Valley Tire and Brake site at 644 1st Street, is approximately 120 feet to the north-northeast of the Property. It is identified in the CPS database due to an unauthorized release of hydraulic oil identified during subsurface investigations adjacent and in the vicinity of seven hydraulic lifts at 644 1st Street and two hydraulic lifts at 1046 McKinstry Street. Low concentrations of hydraulic oil were detected and all nine lifts were extracted and removed in 2006. Therefore, the site received case closure on November 28, 2006.

Source: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL0605542749

The remaining CPS sites are not assessed to pose a significant environmental risk to the Property based on their respective horizontal distances from the Property and/or their case closed status.

Other Non-ASTM List - EDR Historical Cleaners:

| LISTING | ADDRESS | DISTANCE |
|--------------------------|--------------------------------|-----------|
| Valet Cleaners & Tailors | 712-714 1 st Street | 0 – 1/8 N |

Valet Cleaners & Tailors at 712-714 1st Street was located approximately 90 feet to the north of the Property. It was identified as having operated from 1965 to 1985. It is unknown if this site was a dry cleaning plant or a drop-off location. Moreover, this site is located up-gradient from the Property and groundwater in the site vicinity was identified as flowing to the southwest, towards the Property and the Napa River. Therefore, Valet Cleaners & Tailors is assessed as a probable environmental concern for the Property.

5.5 VAPOR ENCROACHMENT CONDITION

ODIC performed this Phase I ESA of the Property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. It should be noted that ASTM Standard Practice E1527-13 does not necessarily comply with ASTM Standard Practice E2600-15 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.” For assessment of potential “vapor encroachment conditions” (VECs) and to determine if a “vapor intrusion condition” (VIC) exists on-site, additional investigation beyond ASTM Practice E1527-13 is required.

For the purposes of ASTM Standard Practice E1527-13, “migrate” and “migration” refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Vapor migration in the subsurface is described in ASTM Standard Practice E2600-15; however, nothing in this practice (ASTM Standard Practice E1527-13) should be construed to require application of the ASTM Standard Practice E2600-15 to achieve compliance with all appropriate inquiries.

The Property building at 731 1st (First) Street was identified as a historical dry cleaners from 1986 to 2014. The most recent dry cleaners, Adam’s Cleaners, was identified in the DTSC HWTS as generating liquids with halogenated organic compounds / halogenated solvents from 2005 to 2014 ranging from 0.075 to 0.8 tons annually. ODIC conducted a previous Phase I for 731 1st Street in January 2014 when Adam’s Cleaners was still in operation and identified perchloroethylene (PCE) solvents and an onsite dry cleaning machine. Therefore ODIC recommended a Phase II.

A Phase II was conducted at 731 1st Street by BSK Associates in March 2014 due to ODIC’s Phase II recommendation. BSK advanced two borings, B1 and B2, outside the buildings because interior access was not granted for their subsurface investigation. These locations were selected because they were adjacent to the sanitary sewer line cleanout leaving the dry cleaning business. Soil samples were collected at depths of 5, 7, and 10 feet below ground surface (bgs). Groundwater was encountered around 11 and 13 feet bgs and groundwater samples were collected at 10 feet bgs for both borings. Soil and groundwater samples did not identify any halogenated solvents, specifically perchloroethylene (PCE) and trichloroethylene (TCE). While no soil or groundwater samples from BSK’s Phase II Report identified contaminants of concern, since no borings were advanced inside the dry cleaning building, ODIC believes that the potential of soil, groundwater, and soil vapor contamination remains onsite. Moreover, groundwater in the site vicinity flows towards the southwest and no borings were advanced down-gradient of the building. Therefore, ODIC believes a potential human health risk from the former dry cleaners remains from the former dry cleaners. Therefore, a potential soil vapor issue exists at the Property.

A former dry cleaners known as Valet Cleaners & Tailors at 712-714 1st Street was located approximately 90 feet to the north of the Property. It was identified as having operated from 1965 to 1985. It is unknown if this site was a dry cleaning plant or a drop-off location. Moreover, this site is located up-gradient from the Property and groundwater in the site vicinity was identified as flowing to the southwest, towards the Property and the Napa River. Therefore, a potential VIC exists from to the Valet Cleaners & Tailors north-adjacent site.

Based on Sanborn Fire Insurance Maps from 1901 and 1910, the west-adjacent property that is currently Soscol Avenue was a former Napa Gas & Electric Company gas plant that became a machine shop that operated an onsite foundry. A historical address identified for this site was 831 1st Street. Although this site became part of Soscol Avenue, since no known assessments have been conducted at the Property, a VIC exists.

6.0 USER PROVIDED INFORMATION

6.1 USER PROVIDED INFORMATION

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM Standard Practice E1527-13 Phase I Standards require that the *Report User* conduct independent research and consider certain information before purchasing a property.

The purpose of this section is to describe tasks to be performed by the *User*. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an *landowner liability protections (LLP)* to CERCLA liability. While such information is not required to be provided to the *environmental professional*, the *environmental professional* shall request that the *User* provide the results of these tasks as such information can assist the *environmental professional* in identifying Recognized Environmental Conditions.

Per ASTM Standard Practice E1527-13, the “*User*” is defined as follows:

User—the party seeking to use Practice E 1527-13 to complete an environmental site assessment of the property. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager.

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *User* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that “*all appropriate inquiries*” is not complete.

| USER/CUSTOMER QUESTIONNAIRE | |
|---|--|
| QUESTION | USER/CUSTOMER TO ANSWER |
| <p>(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Reasonably Ascertainable Title and Judicial Records for Environmental Liens and Activity and Use Limitations.</p> <p>Are you aware of any environmental cleanup liens against the <i>Property</i> that are filed or recorded under federal, tribal, state or local law?</p> | <p>The <i>User</i> has not informed ODIC of any knowledge of cleanup liens filed or recorded against the <i>Property</i>.</p> <p>An environmental cleanup lien/AUL search is not required from ODIC as part of this Phase I ESA.</p> <p>An Environmental Lien Search was not requested by the <i>User</i> of this <i>Report</i>; however, based on our review of the California Department of Toxic Substances Control (DTSC) EnviroStor Database, no Environmental Liens or Activity of Use Limitations enforced by the DTSC against the <i>Property</i> were identified.</p> <p>Source: http://www.envirostor.dtsc.ca.gov/public/deed_restrictions.asp</p> |

| | |
|---|---|
| <p>(2.) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).</p> <p><i>Reasonably Ascertainable Title and Judicial Records for Environmental Liens and Activity and Use Limitations.</i></p> <p>Are you aware of any AULs, such as <i>engineering controls</i>, land use restrictions or <i>institutional controls</i> that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?</p> | <p>The <i>User</i> has not informed ODIC of any knowledge of activity or land use limitations associated with the Property.</p> <p>An environmental cleanup lien/AUL search is not required from ODIC as part of this Phase I ESA.</p> <p>An Environmental Lien Search was not requested by the <i>User</i> of this <i>Report</i>; however, based on our review of the California Department of Toxic Substances Control (DTSC) EnviroStor Database, no Environmental Liens or Activity of Use Limitations enforced by the DTSC against the Property were identified.</p> <p>Source: http://www.envirostor.dtsc.ca.gov/public/deed_restrictions.asp</p> |
| <p>(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).</p> <p>As the <i>User</i> of this <i>ESA</i> do you have any specialized knowledge or experience related to the <i>Property</i> or nearby properties? For example, are you involved in the same line of business as the current or former <i>occupants</i> of the <i>Property</i> or an adjoining <i>property</i> so that you would have specialized knowledge of the chemicals and processes used by this type of business?</p> | <p>The <i>User</i> has not informed ODIC of any specialized knowledge or experience related to the Property or nearby properties.</p> |
| <p>(4.) Relationship of the purchase price to the fair market value of the Property if it were not contaminated (40 CFR 312.29).</p> <p>Does the purchase price being paid for this <i>Property</i> reasonably reflect the fair market value of the <i>Property</i>? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the <i>Property</i>?</p> | <p>The <i>User</i> has not informed ODIC of any information pertaining to the purchase price with respect to the fair market value of the Property.</p> |
| <p>(5.) Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30).</p> <p>Are you aware of commonly known or <i>reasonably ascertainable</i> information about the <i>Property</i> that would help the <i>Environmental Professional(EP)</i> to identify conditions indicative of releases or threatened releases? For example, as <i>User</i>,</p> <p>(a.) Do you know the past uses of the <i>Property</i>?</p> <p>(b.) Do you know of specific chemicals that are present or once were present at the <i>Property</i>?</p> <p>(c.) Do you know of spills or other chemical releases that have taken place at the <i>Property</i>?</p> <p>(d.) Do you know of any environmental cleanups that have taken place at the <i>Property</i>?</p> | <p>The <i>User</i> has not informed ODIC of any commonly known or reasonably ascertainable information about the Property that would identify conditions indicative of releases or threatened releases, other than as described in Section 6.3 (Interviews), if applicable.</p> |

| | |
|---|---|
| <p>(6.) The degree of obviousness of the presence of likely presence of contamination at the <i>Property</i>, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the <i>User</i> of this <i>ESA</i>, based on your knowledge and experience related to the <i>Property</i> are there any <i>obvious</i> indicators that point to the presence or likely presence of contamination at the <i>Property</i>?</p> | <p>The <i>User</i> has not informed ODIC of any obvious indicators that point to the presence or likely presence of contamination at the <i>Property</i>, other than as described in Section 6.3 (Interviews), if applicable.</p> |

6.2 PRELIMINARY TITLE REPORT OR LAND TITLE RECORDS

NO PRELIMINARY TITLE REPORTS, RECORDED LAND TITLE RECORDS, OR HISTORICAL CHAIN OF TITLE WAS REVIEWED DURING THIS ESA. ODIC'S SCOPE OF INVESTIGATION AS WELL AS THE CONTRACTUAL AGREEMENT BETWEEN ODIC AND THE CLIENT DOES NOT INCLUDE OBTAINING AND/OR REVIEWING A PRELIMINARY TITLE REPORTS, RECORDED LAND TITLE RECORDS, OR HISTORICAL CHAIN OF TITLE. 6.3 INTERVIEWS

| Interview with Owner | | | |
|-------------------------------------|---|-----------|-------|
| INTERVIEW DETAILS | | | |
| Name | Mr. JB Leamer | | |
| Title | Owner | | |
| Contact Information | 415-286-3126 | | |
| Purpose of Environmental Assessment | Property Sale | Refinance | Other |
| | | | X |
| Summary | Mr. Leamer engaged ODIC to conduct a Phase I Environmental Site Assessment to determine the history of the Property. Plans for the Western Property and Eastern Property are to redevelop the sites into two boutique hotels. He explained that in 2009-2010 a commercial building was demolished at 743 1 st Street as part of rebuilding the railroad bridge for the Napa Valley Wine Train. Due to ODIC's Phase II recommendation in 2014 because of the dry cleaners recognized environmental conditions (RECs), he said (and provided) a Phase II done for the Property by BSK. He added that Trade Brewing has occupied 731 1 st Street for approximately one year and that it was vacant for a couple years before then. | | |

7.0 CONCLUSIONS

ODIC Environmental (ODIC) performed a Phase I Environmental Site Assessment of the Property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. ASTM Standard Practice E1527-13 defines a *Recognized Environmental Condition (REC)* as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *Property*: (1) due to *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. Conditions determined to be *de minimis* generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not *Recognized Environmental Conditions*.

A *Historical Recognized Environmental Condition (HREC)* is a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *Property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *Property* to any required controls (for example, *Property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

A *Controlled Recognized Environmental Condition (CREC)* is a *Recognized Environmental Condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *Property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

| Conclusions and Findings | |
|---|---|
| <p>ODIC performed a Phase I Environmental Site Assessment of the Property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. This environmental assessment has revealed the following in connection with the Property:</p> | |
| REC identified: | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| HREC identified: | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No |
| CREC identified: | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No |
| Significant data gap identified: | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| <p>Refer to Section 8.0, Recommendations and Opinions, for further details.</p> | |

8.0 RECOMMENDATIONS AND OPINIONS

ODIC performed a Phase I Environmental Site Assessment of the Property in conformance with the scope and limitations of ASTM Standard Practice E1527-13.

Property and Vicinity History

West Property

The West Property was developed with four residential dwellings and storage sheds in 1886. By 1891, one of the dwellings was replaced with the Hotel Di Genova. The hotel was later renamed the Lombardo Hotel until it was demolished in 1967. The West Property remained relatively unchanged until the mid-1950s when two of the residential dwellings were removed. In the late 1960s, all improvements on the West Property were demolished. Since then, it has remained a vacant commercial lot.

East Property

The East Property was developed with six residential dwellings and storage sheds in 1886 that included the four current buildings. In the 1940s, a restaurant building was constructed at the west side of the East Property replacing two of the dwellings. By the 1950s, the restaurant was converted into a furniture store known as First Street Furniture Store that operated into the 1970s. This building later became an office and plumbing showroom until it was demolished in 2009 to rebuild the railroad bridge and railroad tracks. In 1982, the residential dwelling at 731 1st Street was converted to a commercial use and was occupied by a possible dry cleaners known as Valet Cleaner & Tailor until 1988 followed by Ye Olde Valet Shoppe from the late 1980s through the 1990s. From 2003 to 2014, Adam’s Cleaners operated a dry cleaners with an onsite dry cleaning machine that uses perchloroethylene (PCE). In 2017, Trade Brewing moved into the building. The residential dwellings at 711 1st Street, 718 Water Street, and 730 Water Street have remained relatively unchanged since the 1880s.

Previous Environmental Site Assessments – 730 Water Street and 731 1st Street

ODIC conducted a previous Phase I Environmental Site Assessment for 730 Water Street and 731 1st Street dated January 29, 2014. At the time of site reconnaissance, the Property was occupied by a residential dwelling at 730 Water Street and Adam’s Cleaners at 731 1st Street. A Columbia-model dry cleaning machine and drums of perchloroethylene (PCE) were identified at Adam’s Cleaners. The owner of Adam’s Cleaners, Mr. Adam Chebl, was interviewed at that time. He said that the previous occupant was a seamstress and that in 2003, he installed the PCE solvent dry cleaning machine.

Since 731 1st Street was a dry cleaners at the time of site reconnaissance, and was likely a historical dry cleaners, ODIC stated that that due to the shallow groundwater in the site vicinity and the potential for vapor intrusion due to the potential soil and soil vapor contamination associated with dry cleaners, a subsurface investigation should be conducted.

Based on ODIC’s Phase II recommendation, BSK Associates conducted a targeted Phase II Investigation Report for Soil and Groundwater at Adam’s Cleaners. BSK advanced two borings, B1 and B2, outside the buildings because interior access was not granted for their subsurface investigation. These locations were selected because they were adjacent to the sanitary sewer line cleanout leaving the dry cleaning business. Soil samples were collected at depths of 5, 7, and 10 feet below ground surface (bgs). Groundwater was encountered around 11 and 13 feet bgs and groundwater samples were collected at 10 feet bgs for both borings. Soil and groundwater samples did not identify any halogenated solvents, specifically perchloroethylene (PCE) and trichloroethylene (TCE). BSK stated that based on their site observations and analytical results of soil and groundwater samples, no evidence of contamination from the former or existing dry cleaning operations was discovered.

While no soil or groundwater samples from BSK’s Phase II Report identified contaminants of concern, since no borings were advanced inside the dry cleaning building, ODIC believes that the potential of soil, groundwater, and soil vapor contamination remains onsite, specifically below the building and a significant data gap exists despite BSK’s Phase II report. Moreover, groundwater in the site vicinity flows towards the southwest and no borings were advanced down-gradient of the building. Therefore, ODIC believes a potential human health risk from the former dry cleaners remains and this is a Recognized Environmental Condition (REC).

Off-Site Concerns

Former Cleaners – 712-714 1st Street

A former dry cleaners known as Valet Cleaners & Tailors at 712-714 1st Street was located approximately 90 feet to the north of the Property. It was identified as having operated from 1965 to 1985. It is unknown if this site was a dry cleaning plant or a drop-off location. Moreover, this site is located up-gradient from the Property and groundwater in the site vicinity was identified as flowing to the southwest, towards the Property and the Napa River. Therefore, a potential vapor intrusion condition (VIC) exists from to the Valet Cleaners & Tailors north-adjacent site.

Former Gas Plant and Machine Shop – 831 1st Street

Based on Sanborn Fire Insurance Maps from 1901 and 1910, the west-adjacent property that is currently Soscol Avenue was a former Napa Gas & Electric Company gas plant that became a machine shop that operated an onsite foundry. A historical address identified for this site was 831 1st Street. Although this

site became part of Soscol Avenue, since no known assessments have been conducted at the Property, a VIC exists.

Recommendations and Opinions

Although BSK Associates conducted a Phase II at 731 1st Street, no borings were advanced inside the building and down-gradient of the former dry cleaners. This represents a significant data gap and a REC.

A possible dry cleaners known as Valet Cleaners & Tailors was located on the north side of 1st Street within 100 feet of the Property. Since groundwater in the site vicinity flows to the southwest, towards the Property and the Napa River, this off-site property is considered a REC.

A former Napa Gas & Electric Company gas plant that became a machine shop that operated an onsite foundry was located west of the West Property. This former site is now part of Soscol Avenue. Since no known assessments have been conducted at the West Property, this represents a REC.

ODIC recommends further investigation.

9.0 REFERENCES

During the preparation of this *Report*, a number of sources were contacted, individuals were interviewed, and various federal, state, county or local municipal agencies were consulted. Documentation applicable to the Property in those departments and agencies was requested and reviewed when and where reasonably ascertainable, as detailed in ASTM Standard Practice E1527-13. Individuals listed without phone numbers were contacted in person or by e-mail. Reference sources for site-specific information, hydrogeologic setting, technical data, historical research data, environmental reports and other records used are identified throughout this *Report* in corresponding sections. Any additional reference sources not cited in each applicable section of this *Report*, if applicable, are disclosed in this section.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

| <u>Lower Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |
|------------------------|----------------------|-----------------------------|---------------|-------------|
| PG&E GAS PLANT NAPA | 5TH BET MAIN & BROWN | SSW 1/4 - 1/2 (0.262 mi.) | Q95 | 163 |

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

EXECUTIVE SUMMARY

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 79 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 10 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 16 UST sites within approximately 0.25 miles of the target property.

State and tribal Brownfields sites

BROWNFIELDS: A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

A review of the BROWNFIELDS list, as provided by EDR, and dated 06/25/2018 has revealed that there are 2 BROWNFIELDS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 03/19/2018 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 5 SWEEPS UST sites within approximately 0.25 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 06/04/2018 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/21/2018 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 06/18/2018 has revealed that there are 2 Notify 65 sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 18 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

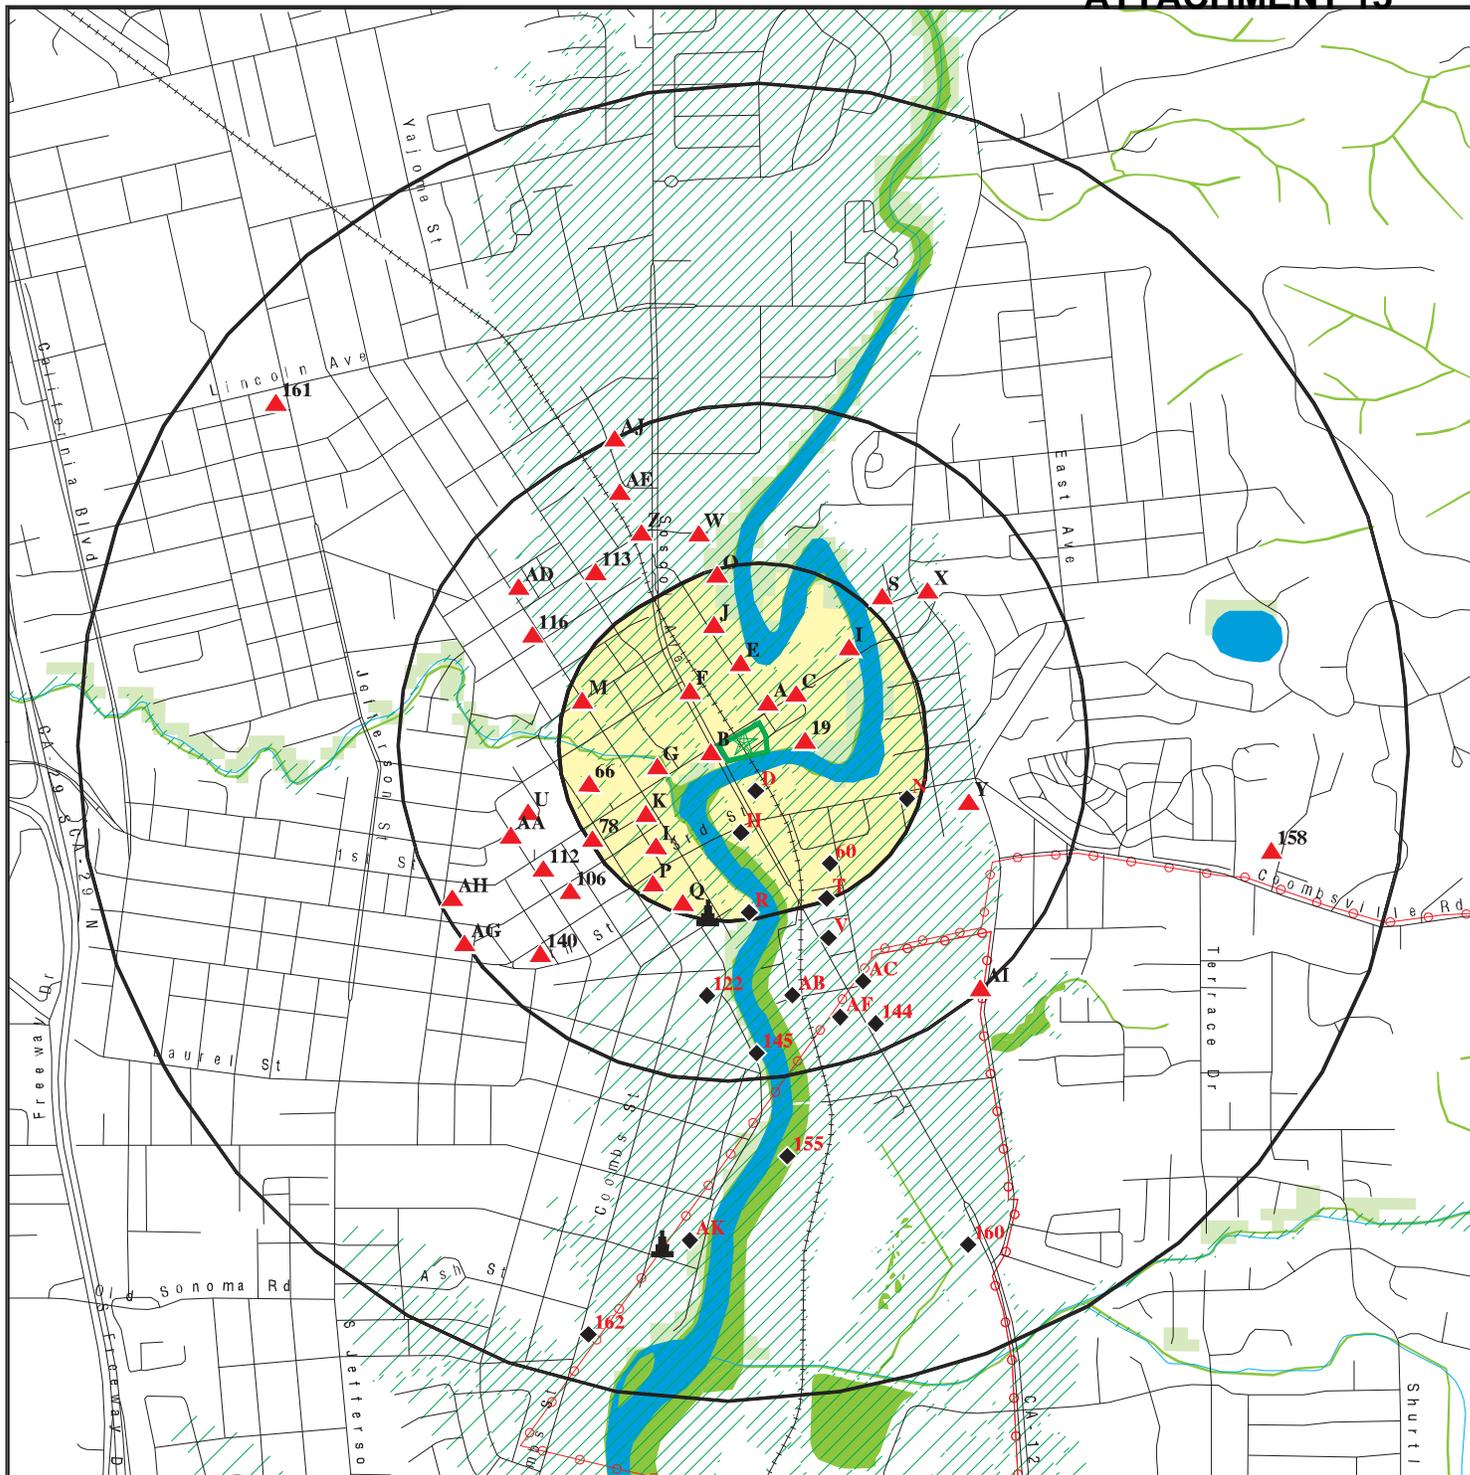

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: 181
 . Waste name: Other inorganic solid waste

. Waste code: 343
 . Waste name: Unspecified organic liquid mixture

. Waste code: 352
 . Waste name: Other organic solids

. Waste code: D001
 . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0605500098
Global Id: T0605500098
Latitude: 38.296230951378
Longitude: -122.282831668854
Status: Completed - Case Closed
Status Date: 02/22/2018
Case Worker: BGS
RB Case Number: 28-0106
Local Agency: Not reported
File Location: Local Agency
Local Case Number: Not reported
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:

The subject property (Site) is a commercially-zoned 1/2 acre parcel located on 5th and Main Streets near the Napa River in downtown Napa, California.. The Site was occupied previously by an industrial facility, which included the operation of grain silos and barley mills. Thereafter, the site structures are thought to have been used for a wine-making operation; the warehousing of agricultural chemicals, lumber and other building materials; an automotive maintenance and painting operation; and several other commercial/industrial activities apparently including a trucking firm during the late-1940's to the 1950's. Previous business activities at the site included the utilization of two 500-gallon, underground fuel storage tanks, which may have been installed during the late-1940's or early-1950's for use by the trucking operation. The two underground storage tanks were removed from the site sometime during early-1987. Following the removal of the storage tanks, several subsurface investigations were conducted, which included the

installation of several soil borings, subsurface extraction piping and twelve groundwater monitor wells. Groundwater in saturated soil beneath the site has been found to contain significantly elevated concentrations of fuel hydrocarbons in the ranges of gasoline and diesel fuel (TPHg and TPHd), including the associated volatile organic BTEX compounds (i.e., benzene, toluene, ethylbenzene and total xylenes), and the lead scavenger 1,2-dichloroethane (DCA). Soil beneath the site building mainly in the area where the former underground storage tanks were located appears to be contaminated significantly with fuel hydrocarbons to a depth of approximately 20 feet below ground surface where saturated sandy strata has been encountered.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Region: STATE
Facility Status: Open - Remediation
Status Date: 12/01/2017
Global Id: T0605577082
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 38.3030888593221
Longitude: -122.277917861938
Case Type: Cleanup Program Site
Case Worker: MS
Local Agency: Not reported
RB Case Number: 28S0063
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Surface water

Potential Contaminants of Concern: Gasoline, Other Petroleum
Site History: The subject property (Site) consists of several parcels situate adjacent to one another totaling 11 acres on the east bank of the Napa River in a mixed commercial and residential zone of Napa, California. The property is in a mixed commercial and residential neighborhood. Residential houses are located east of the site. The main parcel of the Site is currently vacant and unimproved with the exception of a single-story small building located at the corner of Clay and Jaurez streets. This site is currently impacted by petroleum hydrocarbons in soil and groundwater. In soil gas, there are high TPHg concentrations (15,000 ug/m3). In groundwater, there is significant TPHg (19,000 ug/l), TPHd (78,000 ug/l), TPHmo (4300 ug/l), and benzene (1100 mg/l) contamination. For metals in soil, arsenic and vanadium are above the ESLs.

FINDS:

Registry ID: 110058260493

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 06/20/1990
 Comments: Completed Site Screening. On Cortese List. Former underground storage tank site. Soil samples collected showed TPH as gasoline, diesel and motor oil (19,180 ppb, benzene (41,400 ppb), toluene (7 ppb), xylenes (623,000 ppb), & ethylbenzene (126,000 ppb) and organic lead (0.73 ppb). The on-site soil is contaminated by TPH and volatile organic compounds (VOCs). 1,000 cubic yards of contaminated soil removed off-site. No ground water data is available and there is potential for groundwater contamination. PEA recommended.

 Local Agency: Not reported
 RB Case Number: 28S0032
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
 Site History: The subject property (Site) is located at 901 Eighth Street in Napa, California. The Site located near the eastern banks of the year-round flowing Napa River and is associated with another open case (BASALT ROCK COMPANY INC -DILLINGHAM CONSTRUCTION, case ID: SL1825P926) on the same parcel. The Site is a part of a large and complex grouping of properties under the Napa Valley Flood Control and Water Conservation District's (NFCWCDC) plan to evaluate multiple land sites for the flood control project in the city of Napa. Assessment of petroleum impacts from former Site operations and land use are required for flood project management. Cost-effective solutions to remediate any contamination of on-Site soil and groundwater is ongoing.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:

Site ID: 137197
 CERS ID: 10171755
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 137197
 Site Name: NAPA VALLEY WINE TRAIN, INC.
 Violation Date: 12-16-2014
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22,
 Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers with
 the following requirements: "Hazardous Waste", name and address of the
 generator, physical and chemical characteristics of the Hazardous
 Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 12/16/2014. Observed 440-gallon waste oil
 tank without an Accumulation Start Date. This was corrected during the
 inspection.
 Violation Division: Napa County Department of Environmental Management
 Violation Program: HW
 Violation Source: CERS

Site ID: 137197

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: * Discovery
 Completed Date: 01/12/1988
 Comments: Facility identified: Environmental Health (Napa); Prop 65 file found; complaint of improper discharge of plating wsts by former employee 02/28/85.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 02/18/1988
 Comments: DHS Drive-by: Visibility limited. Site Screening Done: Recommend Preliminary Assessment (med) based on drive-by and business type; send questionnaire.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 06/25/2008
 Comments: The site operated from 1979; but facility closure is unknown. Based on a complaint, a soil investigation was conducted, with the County's oversight, which detected lead and chromium above the screening levels. Records indicated investigation was not completed by owner and that the County could not make contacts with the property owner. It is currently operated by North Coast Laminates.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 RB Case Number: 28S0031
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
 Site History: Site is used as a PG&E yard for company vehicles and supplies of various types. Bounded on the east by an RV park and to the south by several buildings of Lincoln / Ford of Napa. The site is flat and mostly improved with asphalt cover and a few open landscaping areas. A few offices occupy the north / northwestern portion of the irregular-shaped property. Mostly commercial and light industrial zoning. situate proximal (less than 1000 feet) to the Napa River.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Region: STATE
Facility Status: **Open - Verification Monitoring**
Status Date: 01/19/2016
Global Id: SL20217835
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 38.2888923983039
Longitude: -122.281694412231
Case Type: Cleanup Program Site
Case Worker: BAC
Local Agency: Not reported
RB Case Number: 28S0008
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
Site History: The subject property (Site) is an undeveloped river terrace just south of parcels formerly used for several oil bunker and storage facilities located on the east bank of the Napa River in Napa, California. The Site is under review for sediment discharge to the Napa River and associated water quality impacts from the Site remediation activities. The Site is under Order # 01-066 by the RWQCB to implement post-construction Site monitoring, prior to excavation of contaminated soils. The Napa County Flood Control District is responsible for the Site billing activities, and Chevron is the responsible party for cleanup work including remediation and mitigation efforts.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Voluntary Cleanup Agreement
 Completed Date: 03/28/1996
 Comments: The property owner entered into a Voluntary Cleanup Agreement with DTSC for oversight on the preparation and implementation of a site characterization plan. DTSC acts as a support agency to the Napa County Environmental Health Department.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: *Voluntary Cleanup Agreement Completion
 Completed Date: 03/06/1998
 Comments: Site Referred to California Integrated Waste Management Board.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 08/14/1991
 Comments: No residential development is proposed within the identified landfill limits. The area will be an open space and maintained by the owner after closure. Solid waste assessment test (SWAT) results indicate no evidence of waste leakage. However, soil test results indicated total lead levels as high as 2500 ppm. Composite soil samples subjected to the waste extraction test (WET) procedure showed lead concentration levels (13-250 ppm) exceeding the STLC. The Napa County Environmental Health Dept., as Local Enforcement Agency for the Integrated Waste Management Board, has expressed interest in acting as lead agency for the site.

Site History: The subject property (Site) is a former expansive dry cleaner facility, coat factory and wool finishing plant complete with former crude oil underground storage tanks (USTs), solvent tanks (for dry cleaning), numerous above-and below ground storage tanks of various and unknown fluids, petrochemicals, solvents, and dyes. The Site is bordered by the Napa River to the East, and Coombs Street to the West in a semi-industrial area of Napa, California. A long list of contaminants are cause for the Site investigation, including CAM-17 metals such as chromium (total, and hexavalent chromium), volatile organic compounds (VOCs), total petroleum hydrocarbons as diesel (TPHd), as gasoline (TPHg), and Stoddard solvent (TPHss)

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

| | Data Release Frequency: No Update Planned |

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

| | |
|---|---|
| Date of Government Version: 01/03/2018 | Source: Department of Energy & Environmental Protection |

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

USGS TOPOGRAPHIC MAP

| | |
|----------------------|------------------|
| Target Property Map: | 5602154 NAPA, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

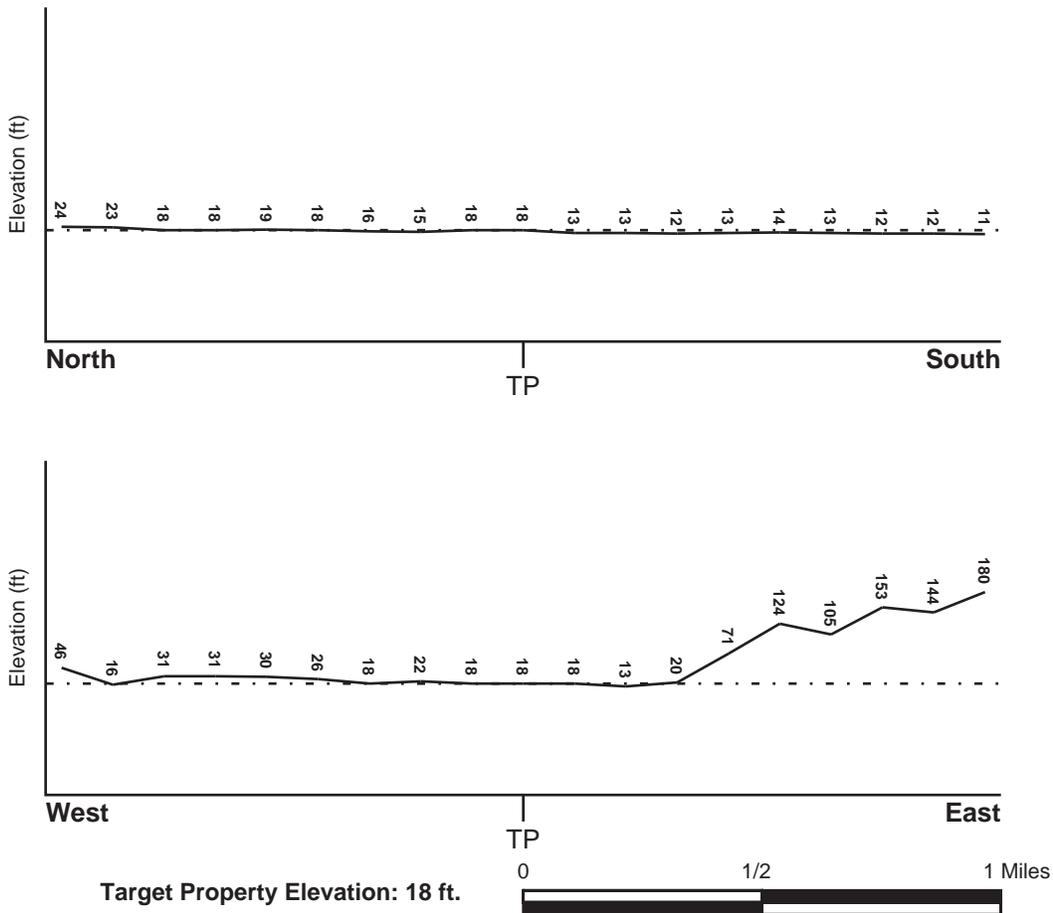

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

| | |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
| NAPA | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: COLE

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 122 inches

| Soil Layer Information | | | | | | | |
|------------------------|----------|-----------|--------------------|--|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 7 inches | silt loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 4 Min: 1.4 | Max: 8.4 Min: 7.4 |
| 2 | 7 inches | 64 inches | silty clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 4 Min: 1.4 | Max: 8.4 Min: 7.4 |

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: EGBERT

Soil Surface Texture: silty clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 53 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 33 inches | silty clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 6.6 |
| 2 | 33 inches | 59 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 6.6 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: BALE

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 153 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--|--|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 24 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 14 Min: 4 | Max: 6.5 Min: 5.6 |
| 2 | 24 inches | 59 inches | stratified gravelly sandy loam to loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand. | Max: 14 Min: 4 | Max: 6.5 Min: 5.6 |

Soil Map ID: 5

Soil Component Name: Yolo

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health
Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation
Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services
Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS
Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA
Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ODIC Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn Library search results.
 Certification #: A24F-4EF3-B8E7

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866

Limited Permission To Make Copies

ODIC Environmental (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

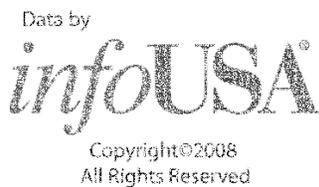

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1923 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) P.N.C. DBA PACIFIC ELECTRIC State Contractors License No. / Class / Expires 61-0886

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Contractor's Signature # _____ Date _____

OWNER / BUILDER DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5), Business and Professions Code: Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure prior to its issuance, also requires the applicant for permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law [Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code] or that he or she is exempt therefrom and the basis for the alleged exemption: Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500):

Please check the following:

I, AS OWNER OF THE PROPERTY, OR MY EMPLOYEES WITH WAGES AS THEIR SOLE COMPENSATION, WILL DO THE WORK, AND THE STRUCTURE IS NOT INTENDED OR OFFERED FOR SALE (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of the property, who builds or improves thereon, and who does the work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.)

I, AS OWNER OF THE PROPERTY, AM EXCLUSIVELY CONTRACTING WITH LICENSED CONTRACTORS TO CONSTRUCT THE PROJECT (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of the property who builds or improves thereon, and who contracts for the projects with a contractor's license pursuant to the Contractor's License Law.)

I AM EXEMPT under Section _____ B. & P.C. for this reason: _____

Owner's Signature # _____ Date _____

WORKERS' COMPENSATION DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY one of the following declarations:

I HAVE AND WILL MAINTAIN A CERTIFICATE OF CONSENT TO SELF-INSURE FOR WORKERS' COMPENSATION, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I HAVE AND WILL MAINTAIN WORKERS' COMPENSATION INSURANCE, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
 Carrier STATE FUND Policy Number 1529725 Exp. Date 12-9-00
 (This section need not be completed if the permit is for one hundred dollars (\$100) or less.)

I CERTIFY THAT IN THE PERFORMANCE OF THE WORK FOR WHICH THIS PERMIT IS ISSUED, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date 3-2-00 Applicant's Signature # [Signature]

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that there is a construction lending agency for the performance of the work for which this permit is issued. (3097 civ. code)

Lender's Name _____
 Lender's Address _____ City _____ State _____ Zip _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all City and County ordinances, rules, regulations, and State laws relating to building construction, and with any and all conditions of permit. I agree to defend, indemnify, and hold harmless the City of Napa, its officers, agents and employees from any and all claims and liability for personal injury, including death, and property damage, caused by, arising out of, or in any way connected with the issuance of this permit. I hereby acknowledge that issuance of this permit does not authorize the use or occupancy of any sidewalk, street, or subsidewalk. I hereby authorize representatives of the City of Napa to enter the above mentioned property for inspection purposes. I hereby certify that I am the property owner or am authorized to act on the property owner's behalf.

- DESCRIPTION OF WORK:
- I understand that Section 22-06, Napa Municipal Code, requires construction of curbs, gutters, sidewalks and drainage with all building improvements and that this permit is subject to compliance with the above provisions. I promise to construct improvements in accord with the above provisions according to line and grade as furnished by the City Engineer.
 - I understand that building on this property is regulated by the Building Codes, Zoning Ordinances, Fire Ordinances, and set-back line requirements and by State Housing Law. I promise that any construction under this permit will be in accord with these requirements. I further understand that I alone am responsible for seeing that these requirements are met and that by issuing this permit, the City of Napa is making no representation, express or implied, that my plans conform to any of these requirements.
 - I understand that the property on which the work under this permit is to be performed may be subject to easements, or other restrictions which may limit the placement of improvements on the property. I understand that I alone am responsible for seeing that the improvements are placed properly and that, by issuing this permit, the City of Napa is making no representations, either express or implied, that the placement of the improvements conform to any restrictions that there may be on the property.
 - I hereby agree to save, indemnify, and keep harmless the City of Napa against all liabilities, judgments, cost and expenses which may in any way accrue against said City in consequence of the granting of this permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk, placed by virtue thereof, and will in all things strictly comply with the conditions of my permit.

State Compensation Ins. Policy No. _____ Exp. Date _____
 I certify that the following Contr. Lic. No. _____ and classification _____ is in full force and effect.*

- I hereby certify I am exempt from Sec. 7031.5 of the Business and Professional Code, Div. 3, Chap. 9, Contractor's License Law under the following section:
 Owner Sec. 7044 (); Minor Work Under \$100 Sec. 7048 (); or employee working for Wage Only Sec. 7053 ();
 Other _____
- I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner as to become subject to Worker's Compensation Laws of California.
- I hereby acknowledge and state that the information I have provided is correct and agree to comply with all City Ordinances and State Laws regulating building construction.

Signature of Applicant William Guadagnini Date 2/5/82

NOTE: when property released, this form constitutes a building permit. This permit expires and becomes null and void should work not be commenced within 120 days from release date or should authorized construction be suspended or abandoned for a period of 120 days after work is commenced.

JAN 27 2004

Dear Project Developer/Contractor:

As we near the completion of your project, the following departments must sign off your project prior to utility connections and issuance of a Certificate of Occupancy. All of the below will not pertain to all projects. Be sure to call each department well in advance to schedule the inspections. The Building and Electrical Departments will be the last ones to sign and we will notify P.G.&E. Sub-contractors shall have a City of Napa business license. Please list all sub-contractors and license #'s on the reverse side of this form.

Section 22-86 Napa Municipal Code requires construction of curbs, gutters, sidewalks and drainage with all building improvements. This permit is issued subject to compliance with the above provision. The City Engineer will issue permit and furnish line and grade. I hereby certify and agree if a permit is issued that all the provisions of the Building Codes and Zoning Ordinance, Fire Ordinance and Set-Back line requirements of the City of Napa, together with the California State Housing Law, will be complied with whether herein specified or not. And I hereby agree to save, indemnify and keep harmless the City of Napa against all liabilities, judgments, cost and expense which may in any way accrue against said City in consequences of the granting of this permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk placed by virtue thereof, and will in all things strictly comply with the conditions of my permit.

IF APPLYING FOR A HOME OWNER'S PERMIT: "I certify that in the performance of the work for which this permit is issued I shall not employ any person in any manner so as to become subject to the workmen's compensation laws of California. I certify I will personally do all of the work involved in the installation of the above and that I am the present owner and resident of the property where the installation will be made."

OWNER / BUILDER DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).

Please check one of the following

I, AS OWNER OF THE PROPERTY, OR MY EMPLOYEES WITH WAGES AS THEIR SOLE COMPENSATION, WILL DO THE WORK, AND THE STRUCTURE IS NOT INTENDED OR OFFERED FOR SALE (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of the property, who builds or improves thereon, and who does the work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proof that he or she did not build or improve for the purpose of sale.)

I, AS OWNER OF THE PROPERTY, AM EXCLUSIVELY CONTRACTING WITH LICENSED CONTRACTORS TO CONSTRUCT THE PROJECT (Sec. 7044, Business and Professions Code. The Contractor's License Law does not apply to an owner of the property who builds or improves thereon, and who contracts for the projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

I AM EXEMPT under Section _____ B. & P. C. for this reason _____

WORKERS' COMPENSATION DECLARATION

I HEREBY AFFIRM UNDER PENALTY OF PERJURY one of the following declarations.

I HAVE AND WILL MAINTAIN A CERTIFICATE OF CONSENT TO SELF-INSURE FOR WORKERS' COMPENSATION, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I HAVE AND WILL MAINTAIN WORKER'S COMPENSATION INSURANCE, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My Workers' Compensation insurance carrier and policy number are:

Carrier: Redland Insurance Co Policy Number: RPSI-11305-01 Exp. Date: 1/1/2006
 (This section need not be completed if the permit is for one hundred dollars (\$100) or less.)

I CERTIFY THAT IN THE PERFORMANCE OF THE WORK FOR WHICH THIS PERMIT IS ISSUED, I shall not employ any person in any manner so as to become subject to the Workers' Compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

X *[Signature]* *[Date: 12/22/05]*

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that there is a construction lending agency for the performance of the work for which this permit is issued. (3097 civ. code)

Lender's Address _____ City _____ State _____ Zip _____

I hereby certify that I have read this application and state that the above information is correct. I agree to comply with all City and County ordinances, rules, regulations, and State laws relating to building construction, and with any and all conditions of permit. I agree to defend, indemnify, and hold harmless the City of Napa, its officers, agents and employees from any and all claims and liability for personal injury, including death, and property damage caused by, arising out of, or in any way connected with the issuance of this permit. I hereby acknowledge that issuance of this permit does not authorize the use or occupancy of any sidewalk, street, or subsidewalk. I hereby authorize representatives of the City of Napa to enter the above mentioned property for inspection purposes. I hereby certify that I am the property owner or am authorized to act on the property owner's behalf.

LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) _____ State Contractors License No. / Class / Expires _____
 None Identified / /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Contractor's Signature _____ Date _____

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) to the applicable item(s) of Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).

I, as owner of the property, or my employee with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code). The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.

I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code). The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.

I am exempt from licensure under the Contractors' State License Law for the following reason:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.legn.ca.gov/liclaw.html>

Owner's Signature _____ Date 5/2/16

WORKERS' COMPENSATION DECLARATION

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:

I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No. _____

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
 Carrier _____ Policy No. _____ Expiration Date _____
 Name of Agent _____ Tel No. _____

I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

DESCRIPTION OF WORK:

I understand that Section 22-86, Napa Municipal Code, requires construction of curbs, gutters, sidewalks and drainage with all building improvements and that this permit is subject to compliance with the above provisions. I promise to construct improvements in accord with the above provisions according to line and grade as furnished by the City Engineer.

I understand that building on this property is regulated by the Building Codes, Zoning Ordinances, Fire Ordinances, and set-back line requirements and by State Housing Law. I promise that any construction under this permit will be in accord with these requirements. I further understand that I alone am responsible for seeing that these requirements are met and that by issuing this permit, the City of Napa is making no representation, express or implied, that my plans conform to any of these requirements.

I understand that the property on which the work under this permit is to be performed may be subject to easements, or other restrictions which may limit the placement of improvements on the property. I understand that I alone am responsible for seeing that the improvements are placed properly and that, by issuing this permit, the City of Napa is making no representations, either express or implied, that the placement of the improvements conform to any restrictions that there may be on the property.

I hereby agree to save, indemnify, and keep harmless the City of Napa against all liabilities, judgments, cost and expenses which may in any way accrue against said City in consequences of the granting of the permit, or from the use of occupancy of any sidewalk, street or sub-sidewalk, placed by virtue thereof, and will in all things strictly comply with the conditions of my permit.

LICENSED CONTRACTOR'S DECLARATION
Contractor (Name) State Contractors License No. / Class / Expires
C.L.Y. INC. 690380 / /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.
Contractor's Signature: [Signature] Date: 10/2/14

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).
 I, as owner of the property, or my employees with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who, through employees or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner/Builder will have the burden of proving that it was not built or improved for the purpose of sale).
 I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.)
 I am exempt from licensure under the Contractors' State License Law for the following reason:
By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by the permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>

Owner's Signature: [Signature] Date: [Blank]

WORKERS' COMPENSATION DECLARATION

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:
 I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No. _____

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
Carrier: DOE Policy No. 4507017 Expiration Date: _____
Name of Agent: _____ Tel No: _____

I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Property Owner or Authorized Agent Signature: [Signature] Date: 10/2/14

DECLARATION REGARDING LENDING AGENCY

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that there is a construction lending agency for the performance of the work for which this permit is issued (2097 civ. code).
Lender's Name and Address: _____ City: _____ State: _____ Zip: _____

DECLARATION BY CONSTRUCTION PERMIT APPLICANT

By my signature below, I certify to each of the following:
I am a California licensed contractor or the property owner or authorized to act on the property owner's behalf.

I have read this construction permit application and the information I have provided is correct. I agree to comply with all applicable city and county ordinances and state laws relating to building construction. I authorize representatives of this city or county to enter the above-identified property for inspection purposes.

LICENSED CONTRACTOR'S DECLARATION

Contractor (Name) State Contractors License No. / Class / Expires
KENNY BROOKS HEATING & # 813142 / /

I HEREBY AFFIRM UNDER PENALTY OF PERJURY that I am licensed under provisions of Chapter 9 (commencing with Section 20000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

[Signature] Date

OWNER / BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code. Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).
 I, as owner of the property, or my employees with wages as their sole compensation, will do all of or portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner/Builder will have the burden of proving that it was not built or improved for the purpose of sale.)
 I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code. The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.)
 I am exempt from licensure under the Contractors' State License Law for the following reason:
 By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: <http://www.leginfo.ca.gov/calaw.html>.

Dear Requestor:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control (DTSC).

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Sacramento's Central Files, please contact me at (916) 255-6449.

Sincerely,
RJ SAROIAN

Subject: RE: Public Records Request

Good afternoon,

After further review, we were not able to find any files for the requested parcels in our own records (711, 718, 730, 743, 780, 803, 819, 823, 825, 876 Water St, Napa, CA 94559 and 711, 730, 743, 803, 819, 823, 825, 876 1st St, Napa, CA 94559).

However, another option for records related to your request, including CERS data, may be viewed at Cal EPA's public portal: <https://siteportal.calepa.ca.gov/nsite/Dashboard/>

Thank you,

Note: For future file requests, please email PBESrecords@countyofnapa.org. Thank you.

**Subject: Report of Findings Targeted Phase II Environmental Investigation at
730 Waters Street, Napa, California**

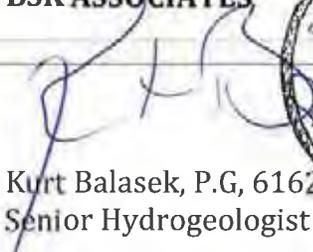

Dear Mr. Loban,

BSK Associates (BSK) has completed this targeted Phase II Investigation Report for Soil and Groundwater for the Adam's Cleaners Site located at 730 Water Street in Napa, California. The targeted Phase II report, which included background data review, soil and groundwater sampling, and report preparation, was conducted in accordance with BSK Proposal ES1410051, dated March 4, 2014. The enclosed report provides our assessment for use in site management or future site development activities.

We appreciate the opportunity to assist you during the preliminary phase of your project and look forward to continuing our relationship. If you have any questions, please contact us.

Respectfully submitted,

BSK ASSOCIATES

Targeted Phase II Investigation
730 Waters Street
Napa, California

Introduction and Background

BSK Associates was contacted by a prospective buyer for an approximate 0.7 acre property located at 730 Waters Street in Napa, California (Figure 1). The property currently houses a dry cleaning business (Adam's Dry Cleaning) which has reportedly been active on the property for approximately ten years. During due diligence work for the real estate transaction, the consultant conducting the historic site review discovered evidence in County records that suggested some kind of dry cleaning operation had been on the property in the 1980's. Based on this "data gap", BSK was retained to conduct a targeted phase II soil and groundwater investigation.

Purpose and Scope of Services

The purpose of our work was to investigate reports of possible soil or groundwater impacts from former dry cleaning activities on the site identified in a Phase I Environmental Site Assessment (ESA) prepared in January 2014 by ODIC Environmental and Energy. Specifically, the ESA historic write up identified a "data gap" for the property they could not then substantiate. The report stated that:

"BETTY GUADAGNI is identified as the owner/operator of the facility, and multiple regulatory violations are reported including enforcement action notices dated Mar 24, Mar 25 and May 3, 1988. Nature of violation and regulatory enforcement actions are unknown, but EDR reports the enforcement action was "written informal", and they were results of "focused compliance inspection."

In accordance with our March 4, 2014 (BSK Proposal Number ES1410051), the scope of BSK's work included:

- Advancing two hand auger soil borings to approximate depths of 12 feet adjacent to existing sewer pipelines to evaluate possible pipeline leakage
- Collecting and analyzing up to four soil and two water samples
- Backfilling the borings with neat cement grout
- Analyzing the samples for Volatile Organic Compounds-use EPA method 8260
- Preparing a brief report describing our field work and findings

Site Description

The site is approximately 0.7 acres, almost entirely paved and contains two wooden structures that appear to have historically been used as residences (Figure 2). The northern-most building currently houses a small dry-cleaning operation called Adam's Dry

Cleaning which has reportedly been located on the property for the past 10 years. The northern portion of the site contains an approximate six foot concrete retaining wall structure that supports an approach ramp for a surface road bridge on First Street. A paved driveway ramp descends from the bridge approach ramp onto the property just east of the northern building until it reaches the surface level of Water Street. The property is bounded by First Street to the north, the locally elevated Napa Wine Train railroad track to the west, Water Street to the south and residential structures to the east. The Napa River is located to the south within 150 feet site. The site is well kept with not visible garbage or miscellaneous debris stored on the premises.

Geologic and Hydrogeologic Setting

The City of Napa lies within the Napa River Valley and within the Coast Ranges geomorphic province of California. According to the Geologic Map of California, Santa Rosa Sheet, the site is underlain by Quaternary-aged alluvium deposited by the Napa River. The site lies very near the Napa River. Soil cuttings derived from the two borings were recorded as medium brown clayey silts and silty clays. These soil types are typical of river overbank deposits.

Groundwater beneath the site was first observed at a depth of approximately 10 feet in boring B-1. Water rose slightly to a level of approximately 9 feet below surface grade. Similar observations were made in boring B-2. Local groundwater flow direction was not obtained from our site work but is likely influenced by tide and river level given the proximity of the Napa River to the site.

Site Activities and Observations

On Monday, March 10, 2014, personnel from BSK arrived on site and advanced two shallow soil borings using hand auger equipment. Borings B-1 and B-2 were advanced to depths of 13 and 11 feet, respectively. The borings were advanced adjacent to the sanitary sewer line cleanout leaving the dry cleaning business and at a location presumed to be in line with the property sewer line a distance of approximately 35 feet from the dry cleaning building. The Napa Sanitation District maps were not available at the time of the site work so Boring B-2 was located using the sewer cleanout from the southern building as a guide.

Three soil samples were collected at from boring B1 and depths of 5, 7 and 10 feet. The boring was extended to a depth of 13 to allow water into the hole for sampling. Water sample W-1 was collected from the boring at a depth of approximately 10 feet below site grade. No odor or discolored soil was observed in soil or water derived from this boring.

Two soil samples were collected from Boring B-2 at depths of 5 and 9 feet. The boring was extended to a depth of 11 feet to allow water into the hold for sampling. Water sample W-2

was collected from the boring at a depth of approximately 10 feet below site grade. No odor or discolored soil was observed in soil or water derived from this boring.

Upon completion of sampling, each boring was backfilled in accordance with the field procedures listed below.

All samples were logged under a chain-of-custody and transported to Kiff Analytical in Davis, California for Volatile Organic Compound Analysis using EPA test method 8260. The samples were transported in an ice chest containing ice and were delivered to the laboratory at 4:00 pm on March 10, 2014. The samples were placed on a 24-hour turn-around-time at the request of our client Glen Loban.

Field Procedures

Each soil boring was advanced using hand auger equipment pre-cleaned with an Alconox/water solution the double rinsed. The samples were obtained from the auger bucket by driving clean, stainless steel or brass tubes into soil within the bucket. Each end of the tube was covered with a Teflon barrier sheet the capped with a tightly fitting manufactured plastic cap. The samples were each labeled with sample location, depth of sample, time and date then placed in a re-sealable plastic bag and into an ice chest containing ice. The hand auger was cleaned between each sample using the method described above.

Water samples were obtained from each boring by dropping a clean disposable bailer into each hole attached to mason's string. The bailer was retrieved after filling with water and immediately decanted into the appropriate laboratory-provided sample bottles. The samples were each labeled with sample location, depth of sample, time and date then placed into an ice chest containing ice.

Once the samples were collected from each boring, a tremmie pipe consisting of 2 inch diameter PVC pipe was placed all the way to the bottom of the boring. Neat cement grout was carefully hand mixed under the supervision of the Napa County Department of Environmental Management inspector, James Newman, then poured into the tremmie pipe until the boring was full. Boring B1 was allowed to harden then covered with decorative gravel adjacent to the sidewalk. Boring B-2 was capped with approximately six inches of rapid-set concrete mix then coated with lamp black to match the surrounding pavement.

All soil generated during the work was placed in a steel drum and stored on site against the south wall of the dry cleaning building. The drum was left on site until laboratory results were obtained. Disposal of the soil cuttings and drum were not included in the scope of our work.

Findings

Analytical results for the four soil samples revealed no volatile organic compounds above the laboratory detection levels at the depths and locations sampled. Similarly, laboratory results for the two water samples revealed no volatile organic compounds above the laboratory detection limits at the depths and locations sampled. Laboratory results and chain-of-custody documentation is included as Appendix A.

Conclusions and Recommendations

The two borings locations were selected to be as close as possible to site sewer lines given that access for the purpose of sampling inside the building was not granted at the time of the investigation. Boring B-1 was placed within one foot of the dry cleaner building sewer cleanout; boring B-2 was placed approximately 35 feet away from the dry cleaner building, at a location lying between the presumed location of the site sewer and the sewer cleanout for the south on site building. These locations were selected to assess leakage from sewer lines as a result of possible dry cleaning solvent discharge into the sanitary system.

Based on site observations and analytical results of soil and groundwater samples obtained from the soil borings, no evidence of contamination from former or existing dry cleaning operations was discovered at the 730 Waters Street Property in Napa, California at the depths and locations sampled.

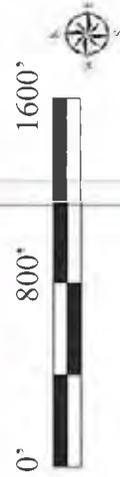

Limitations

Any statements and conclusions in this Interim Report of Findings are based upon the scope of work described in the Targeted Phase II Environmental Investigation dated March 4, 2014 (BSK #ES1410051) and on observations made on the date of our field work March 10, 2014. The work has been performed using a degree of skill consistent with that of competent environmental consulting firms performing similar work in the Napa, California area. Additional research or receipt of information regarding the property and release that was not disclosed or available to us during our assessment may result in revision of any conclusions or recommendations. No recommendation is made as to the suitability of the property for any purpose. The results of our assessment do not preclude the possibility that materials currently or in the future defined as hazardous are present on the property, nor do the results of our work guarantee the quality of groundwater beneath the property. This report is applicable only to the investigated property and should not be used for any other property. No warranty is expressed or implied.

Dear Mr. Balasek,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy D. Turpen". The signature is written in a cursive style with a large initial "T".

**APPENDIX F
QUALIFICATION OF ENVIRONMENTAL PROFESSIONAL**

SUMMARY OF QUALIFICATIONS

HYUNG KIM, PE
PRINCIPAL ENVIRONMENTAL CONSULTANT / MANAGING DIRECTOR

| EDUCATION | YEARS EXPERIENCE | |
|---|------------------|-------------------|
| | TOTAL | WITH CURRENT F RM |
| B.S., Chemical Engineering | 15+ | 11 |
| M.S., Civil/Environmental Engineering | | |
| CURRENT PROFESSIONAL DESIGNATION/REGISTRATION | | |
| Registered Environmental Property Assessor #624247 Professional Civil Engineer #75083 General Engineering Contractor "A" # Hazardous Substance Removal Contractor "HAZ" QSD & QSP #20568 LEED-AP, USGBCI Certified Environmental Manager #2057 | | |
| OTHER PROFESSIONAL QUALIFICATIONS (Publications, Organizations, Training, Awards, Affiliations, etc.) | | |
| Member of AIChE (American Institute of Chemical Engineers) Institute of Hazardous Material Management, CHMM Master Level #012554 Cal OSHA Hazwoper Training Certificate Uniform Fire Code Training for CUPA Inspectors CUPA Hazardous Waste Inspector Training 8 Hours UST Inspector Training, CUPA, 8 Hours Princeton Groundwater, Groundwater Pollution and Hydrology, Certificate of Completion, 2004 Professional Civil Engineering Service - Certificate of completion, 2007 Vapor Intrusion and Health Risk Assessment – Professional Training, 2009 Storm-water Pollution Prevention Training – Professional Training, 2009 | | |
| AREAS OF EXPERTISE | | |
| <ul style="list-style-type: none"> • Environmental Site Assessment and Consulting (Phase I ESA and Transaction Screen Assessment) • Regulatory Agency Compliance and Permitting • Phase II Subsurface Investigation and Pollution Characterization • Underground Storage Tank/Clarifier Abandonment & Regulatory Closure • Asbestos/Lead/IAQ/Mold Assessment & Abatement • Architectural/Engineering Due Diligence • Energy Consulting • Portfolio Management | | |
| SUMMARY OF EXPERIENCE | | |
| <p>Possessing over 15+ years of industry experience, Mr. Kim manages all aspects of environmental assessment and consulting/engineering operations. With a strong educational and professional background in hazardous waste management, environmental regulatory compliance and engineering/assessment planning, he plays a pivotal role in the overall operations of environmental project management. Mr. Kim has also successfully represented the company to financial and & real estate institutions as a technical marketing Director.</p> <p>As a Principal Engineer, Mr. Kim is responsible for in-house QA/QC management in remedial action design, contamination assessment, hazardous material management and real estate due diligence assessment. Mr. Kim also oversees and trains most of the in-house technical staff and directs environmental planning, abatement, engineering, assessment, and remediation projects with assistance from E.P., P.E, P.G., P.H.G, I.H., CAC, and other environmental certified professionals.</p> | | |

Attached please find our PHASE II ENVIRONMENTAL SITE ASSESSMENT, ("the Report") for the above-mentioned Subject Property. This report has been prepared by Odic for the Client under the professional supervision of the principal and/or senior staff whose seal(s) and signatures appear hereon. Neither Odic, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties, and has no personal bias with respect to the parties involved.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The Report speaks only as of its date, in the absence of a specific written update of the Report, signed and delivered by Odic.

There are no intended or unintended third party beneficiaries to this Report, unless specifically named. Odic is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the Report or on the closing of any business transaction. Thank you for the opportunity to prepare this Report, and assist you with this project. Please call us if you have any questions or if we may be of further assistance.

By signing below, Odic declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR 312 and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. Odic has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Respectfully Submitted,

Gabriele Baader, P.G.

Senior Environmental Geologist

1.0 LIMITATIONS

The opinion expressed herein is based on the information collected during our study, our present understanding of the site conditions and our professional judgment in light of such information at the time of preparation of this report. No warranty is either expressed, implied or made as to the conclusions, advice and recommendations offered in this report.

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable Engineers and Geologists practicing in this or similar localities. The samples taken and used for testing and the observations made are believed representative of the study area; however, soil and/or groundwater samples can vary significantly between borings, test pits, and/or test sample locations.

The interpretations and conclusions contained in this report are based on the results of laboratory tests and analysis intended to detect the presence and concentration of certain chemical constituents in samples taken from the subject property (hereinafter referred to as the Property). Such testing and analysis have been conducted by an independent laboratory which is certified by the State to conduct such test analyses and which used methodologies mandated by the Environmental Protection Agency or the State Department of Health Services in the performance of such test and analyses. The consultant has no involvement in, or control over, such testing and analysis, and has no non-laboratory means of confirming the accuracy of such laboratory results. The consultant, therefore, disclaims any responsibility for any inaccuracy in such laboratory results.

The findings, conclusions and recommendations in this report are considered valid as of the present date. However, changes in the conditions of the Property can occur with the passage of time, due to natural process or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur. Accordingly, portions of this report may be invalidated wholly or partially by the changes beyond our control.

INDEPENDENT CONTRACTOR STATUS

In performing Services under the scope of work contained in this Report and agreed Contract/Agreement, ODIC shall operate as, and have the status of, an independent contractor.

PROFESSIONAL RESPONSIBILITY

ODIC shall perform the Services consistent with that level of care and skill ordinarily exercised by other professional consultants under similar circumstances at the time the Services are performed. Client hereby acknowledges that whenever a Project involves hazardous or toxic materials there are certain inherent risk factors involved (such as limitations on laboratory analytical methods, variations in subsurface conditions, economic loss to Client or Property owner, a potential obligation for disclosure to regulatory agencies, a potential for a decrease in market value of real property, and the like) that may adversely affect the results of the Project, even though the Services are performed with such skill and care. No other representation, warranty, or guarantee, express or implied, is included or intended by the scope of work contained in this Report and agreed Contract/Agreement.

LIMITATION OF LIABILITY

Client agrees that the liability of ODIC and all officers, employees, agents, and subcontractors of ODIC (the "ODIC Parties") to Client for all claims, suits, arbitration, or other proceedings arising from the performance of the Services under the scope of work contained in this Report and agreed Contract/Agreement, including, but not limited to, ODIC's professional negligence, errors and omissions, or other professional acts, shall be limited to the professional and general liability coverage amount. ODIC Parties are not liable for any indirect, incidental or consequential damages, lost profits, lost revenue, or loss of property value based on the Services provided as part of the scope of work contained in this Report and agreed Contract/Agreement.

HAZARDOUS OR UNSAFE CONDITIONS

Client has fully informed ODIC of the type, quantity, and location of any hazardous, toxic, or dangerous materials or unsafe or unhealthy conditions that may affect the Project which Client knows to exist. If Client hereafter becomes aware of any such information, Client shall immediately inform ODIC. The discovery of unanticipated hazardous, toxic, or dangerous materials or unsafe or unhealthy conditions constitutes a Changed Condition that may justify a revision to Services and/or Fees. If ODIC takes emergency measures to protect the health and safety of ODIC Parties and/or the public or to prevent undue harm to the environment, the Fee shall be appropriately adjusted to compensate ODIC for the cost of such emergency measures.

RIGHT OF ENTRY

Client agrees to grant or arrange permission for right of entry from time to time by ODIC Parties upon all real property included in the Project Site(s) where the Services are to be performed, whether or not the Project Site(s) is owned by Client. Client recognizes that the use of investigative equipment and practice may unavoidable alter conditions or affect the environment at the existing Project Site(s). ODIC will operate with reasonable care to minimize damage to the Project Site(s). The cost of repairing such damage will be borne by Client, and is not included in the Fee unless otherwise stated.

UNDERGROUND UTILITIES

Client shall correctly designate on plans to be furnished to ODIC, the location of all subsurface structures, such as pipes, tanks, cables, and utilities within the property lines of the Project Site(s) and shall be responsible for any damage inadvertently caused by ODIC to any such structure or utility not so designated.

REPORTING AND DISPOSAL REQUIREMENTS

Nothing contained in this Report shall be construed or interpreted as requiring ODIC to assume the status of an owner, operator, generator, person who arranges for disposal, transportation, storage, treatment, or a disposal facility as those terms appear within any federal or state statute governing the treatment, storage, and disposal of hazardous substances or wastes. Client shall be solely responsible for notifying all appropriate federal, state, municipal, or other governmental agencies of the existence of any hazardous, toxic, or dangerous materials located on or in the Project Site(s), or discovered during the performance of the scope of work contained in this Report and agreed Contract/Agreement. Client agrees that ODIC is not responsible for disclosures, notifications, or reports that may be required to be made to third parties. Client shall be responsible for making and paying for all necessary arrangements to lawfully store, treat, recycle, dispose of, or otherwise handle hazardous or toxic substances or wastes, including but not limited to, samples and cuttings, to be handled in connection with the Project.

SAMPLES AND CUTTINGS

ODIC shall not be obligated to preserve samples such as oil, rock, water, building materials, fluids and other samples obtained from the Project Site(s) for a longer period of time than a laboratory will store the samples for no additional fee. If sample storage is requested by Client beyond standard laboratory time, Client will be responsible for any storage fee for those samples.

HEALTH AND SAFETY

ODIC shall not be responsible for the health and safety of any persons other than ODIC Parties, nor shall it have any responsibility for the operations, procedures, or practices of persons or entities other than ODIC Parties.

2.0 INTRODUCTION

2.1 *Project Information*

| Project Information | |
|--------------------------|---|
| ITEM | |
| ODIC Project Number | 6366822-ESAI |
| Property Address | 711-825 1st Street and 718-730 Water Street, Napa, California 94559 |
| Property Name | None |
| Pre-Drilling Activity | December 19, 2018 |
| Drilling & Sampling Date | December 26, 2018 |
| ODIC's Field Technician | Lita Freeman, Professional Geologist |
| Report Author | Lita Freeman, Professional Geologist |
| QA/QC Reviewer | Gabriele Baader, Professional Geologist Hyung Kim, California Licensed Professional Civil Engineer |
| Property Location | The Property is located on the south side of 1st Street between Soscol Avenue to the west and McKinstry Street to the east. Water Street is south of the Property. Railroad tracks that trend in a north-south direction cross the central portion of the Property. |
| General Setting | The general setting is commercial and residential. |
| Property Type | Commercial building occupied by Trade Brewing, three residential buildings with a detached garage, and undeveloped land. |

2.2 *Objective*

The objective of this investigation was to perform a limited soil gas, soil, and groundwater assessment at the Property to determine the absence or presence of contaminants of concern (COCs) including total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals which may have been released into the subsurface as a result the presence of a dry cleaning tenant in the commercial building and evaluate if a vapor intrusion condition potentially exists on the Site's western portion based on historical uses of this area.

The collection and analysis of groundwater samples from two on-site locations was proposed as part of this investigation. However, groundwater was not encountered in the two boreholes during field work.

This Phase II Environmental Site Assessment is a preliminary investigation assessing shallow soil gas and soil conditions beneath the Property and is intended for screening purposes only. This report presents the results of the limited soil gas and soil investigation. TEG of Rancho Cordova, California was retained as ODIC's drilling contractor and mobile laboratory operator, performing the field activities under ODIC's supervision and oversight for this investigation.

2.3 *Scope of Work*

ODIC performed the following summary scope of work to accomplish the previously described objective. Refer to *Section 4.0 Field Investigation* for a detailed discussion of investigation activities.

Pre-Field Activities:

A Site-specific Health and Safety Plan (Level D Health & Safety according to OSHA CFR 1910.120), Boring Plan, and Work Schedule were prepared, and ODIC notified the Property Owner of the proposed work schedule. ODIC obtained a soil boring permit from the Napa County Department of Planning, Building, and Environmental Services (NCDPBES) prior to commencing drilling activities at the Property.

On December 19, 2018, ODIC performed a site visit to verify existing conditions and pre-mark boring locations and notified Underground Service Alert (USA) of the intent to excavate or drill so that subsurface utilities would be marked to avoid potential damage. In addition, ODIC contracted a private utility locator, A-Plus Utility Locating, to establish the location of underground utilities that may interfere with the proposed boring locations.

Field Investigation:

ODIC executed the following activities during the site investigation conducted on December 26, 2018:

- Installed six soil gas probes (SG-1 through SG-6) to a depth of 5 feet below ground surface (bgs) at select locations across the Property (refer to *Figure 2 – Site Boring Location Map*).
- Advanced five soil borings (SB-1 and SB-3 through SB-6) to a maximum depth of 5 feet bgs, one soil boring (SB-2) to a maximum depth of 7 feet bgs, which is an equivalent depth of 5 feet bgs as measured from the ground level of the commercial building addressed 731 1st Street, and two borings (SB-7 and SB-8) to a maximum depth of 15 feet bgs on the southern portion of the Property, just southwest of the residence at 730 Water Street and near the southwestern corner of the vacant lot (refer to *Figure 2 – Site Boring Location Map*).
- Collected a soil gas sample from each probe SG-1 through SG-6 at the terminal depth in each of the six boring locations, and analyzed the sample collected from each probe for VOCs by U.S. Environmental Protection Agency (U.S. EPA) Method 8260B in a mobile laboratory.
- Collected a soil sample from the terminal depth of each boring SB-1 through SB-6 and submitted for chemical analysis.
- Collected soil samples from borings SB-7 and SB-8 at approximately 5-foot intervals and submitted the sample collected at the 5-foot depth from each boring for chemical analysis.
- Recorded pertinent information such as soil lithology, physical condition of the collected soil samples, moisture content, visual and olfactory description of the collected soil samples, and the time each sample was collected on appropriate boring log forms.
- Submitted one soil sample from each soil boring for laboratory chemical analysis of VOCs by U.S. EPA Method 8260B with the soil sample from borings SB-6 and SB-8 also submitted for laboratory chemical analysis of total petroleum hydrocarbons (TPH) gasoline-range organics (TPH-GRO), diesel-range organics (TPH-DRO), and oil-range organics (TPH-ORO) by U.S. EPA Method 8015B and Title 22 metals by U.S. EPA Method 6010B/7470A.

The soil samples were submitted to a State of California Certified Laboratory using Chain of Custody Protocols for a regular laboratory turnaround time.

Data Evaluation and Reporting:

ODIC evaluated the current and historical data, investigation results, prepared summary tables, maps and other pertinent data summary figures, documented the methods used, and combined the findings into this limited subsurface investigation report.

Analytical results are presented in Tables 1 through 3. The general location of the Property is depicted on *Figure 1 – Site Location Map*; and boring locations are shown on *Figure 2 – Site Boring Location Map*. Appendices include: *Appendix A – Site Photographs*, *Appendix B – Soil Boring Logs*, *Appendix C – Laboratory Analytical Reports*, and *Appendix D – Soil Boring Permit*.

3.0 PROPERTY CHARACTERISTICS

3.1 *Site Description*

The 0.87-acre Property comprises seven parcels located on the south side of 1st Street between Soscol Avenue to the west and McKinstry Street to the east. Water Street is south of the Property. The Property is divided by north-south trending railroad tracks owned by the Napa Valley Wine Train LLC. Three of the seven parcels composing the Property are located east of the railroad tracks (Property's eastern portion), and the remaining four parcels composing the Property are located west of the railroad tracks (Property's western portion).

The Property's eastern portion consists of 0.5 acres that is developed with one commercial building addressed 731 1st Street and occupied by Trade Brewing, three single-family residential buildings addressed 711 1st Street, 718 Water Street, and 730 Water Street, a detached garage, and unpaved land that is addressed 743 1st Street. The Property's western portion consists of 0.37 acres and is currently undeveloped land that is addressed 803, 819, 823, and 825 1st Street.

Access to the Site is via 1st Street to the north, Water Street to the south, and Soscol Avenue to the west.

3.2 *Background History*

ODIC conducted a Phase I Environmental Site Assessment (ESA) for the Property located at 711, 743, 803, 819, 823, 825 1st Street and 730 and 876 Water Street in Napa, Napa County, California 94559 dated September 4, 2018, from which the following information was obtained.

Property History

Historical site information was obtained by ODIC during a Phase I ESA in 2018. Available information reportedly indicated that the Property's eastern portion was developed by 1886 with six residential buildings, including the four currently existing buildings, and storage sheds. In the 1940s, two of the residential buildings were demolished and a building housing a restaurant was constructed. By the 1950s, the building housing the restaurant was converted to a furniture store known as First Street Furniture Store. After closure of the furniture store in the 1970s, this building was used as an office and plumbing showroom until it was demolished in 2009 to allow rebuilding of the railroad bridge and railroad tracks. In 1982, the residential building addressed 731 1st Street was converted to commercial use and was occupied by Valet Cleaner & Tailor (a possible dry cleaner present from 1982 through 1988), Ye Olde Valet Shoppe (late 1980s through 1990s), Adam's Cleaners (a dry cleaner with a dry-cleaning machine using tetrachloroethene [PCE] from 2003 to 2014), and Trade Brewing (2017 to present). The three currently existing residential buildings have remained relatively unchanged since the 1880s.

Historical site information obtained by ODIC indicated that the Site's western portion (addressed 831 1st Street) was developed by 1901 with a gas plant operated by Napa Gas & Electric Company. A machine shop with a foundry later occupied this portion of the Property. Structures on the Property's western portion were demolished to allow realignment of Soscol Avenue.

A limited subsurface investigation was reportedly conducted by BSK Associates (BSK) in 2014 at Adam's Cleaners. The investigation included advancing two soil borings along the sanitary sewer line outside the building since interior access was not granted. Soil samples, collected at depths of 5, 7, and 10 feet bgs, and groundwater samples from each boring were submitted for analysis. Groundwater was reportedly encountered at a depth of 10 feet bgs in each boring. Analysis of the soil and groundwater samples did not reveal the presence of halogenated solvents, specifically, PCE and trichloroethene (TCE). BSK stated that no evidence of impacts from the former or existing dry-cleaning operations was discovered based on their field observations and analytical results of soil and groundwater samples.

Recognized Environmental Conditions (RECs)

The following Recognized Environmental Conditions (RECs) were identified by ODIC based on the findings of their Phase I ESA:

- Potential impacts from the former dry-cleaning tenants on the eastern portion of the Property; and
- Potential vapor intrusion condition on the western portion of the Property based on historical uses of this area.

Recommendations

ODIC recommended a limited subsurface investigation to evaluate subsurface conditions with regard to releases of VOCs, petroleum hydrocarbons and other potential contaminants of concern from previous site operations.

3.3 Physical Setting

The site's physical location was researched employing a United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle (Quad) Map relevant to the Property. The USGS 7.5 Minute Quad Map has an approximate scale of 1 inch to 2,000 feet and may show physical features with environmental significance such as wetlands, water bodies, roadways, mines, and buildings. The elevation of the Property is approximately 18 feet above mean sea level (Napa, California Topographic Quad Map, 2012). There is a regional downslope to the south.

GEOLOGY AND HYDROGEOLOGY

Geologic and hydrogeologic information were obtained from a Phase I ESA report prepared for the Property by ODIC and dated September 4, 2018:

Napa Valley is generally composed of younger alluvial deposits of Pleistocene to Recent age, underlain by older alluvial deposits. The younger alluvium consists of interbedded, unconsolidated gravel, sand, silt, clay, and peat to depths of up to 30 feet below ground surface (bgs). Groundwater based on groundwater monitoring data for Valley Auto Repair at 1046 McKinstry Street (approximately 120 feet to the north-northeast) identified groundwater at approximately 12 to 13 feet below ground surface (bgs) with a flow direction towards the south to southwest and to the west.

While groundwater flow direction at the Property cannot be confirmed without survey measurement of static groundwater level at triangulated points, it is expected to flow in the direction of surface topographical contour, or toward the wetland or nearest water body or discharge basin (percolation channel).

It is important to note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

4.0 FIELD INVESTIGATION**4.1 Field Investigation**

Prior to advancing the borings, the site representative, property owner, and site occupants were notified of the work schedule including locations where drilling would be performed. ODIC's representative performed a site visit on December 19, 2018 to verify the existing conditions and pre-mark boring locations for notification to Underground Service Alert North 811 (USA North 811) of the intent to drill so that subsurface utilities would be marked to avoid potential damage. A private utility locating company, A-Plus Utility Locating, was contracted to complete a geophysical subsurface investigation to identify the locations of underground utilities. A site-specific Health and Safety Plan was prepared, and a field safety meeting was held among field personnel and drilling crew prior to the start of drilling on December 26, 2018.

Soil Gas and Boring Investigation

ODIC performed the following field investigation activities:

- Installed six soil gas probes (SG-1 through SG-6) to a depth of 5 feet bgs at select locations across the Property using a roto-hammer or a truck-mounted direct push drilling unit. Soil gas probes SG-3 and SG-4 were placed approximately 18 inches from the southern wall of the commercial building and slightly angled towards the building.
- Advanced five soil borings (SB-1 and SB-3 through SB-6) to a maximum depth of 5 feet bgs, one soil boring (SB-2) to a maximum depth of 7 feet bgs which is an equivalent depth of 5 feet bgs as measured from the ground level of the commercial building addressed 731 1st Street, and two borings (SB-7 and SB-8) to a maximum depth of 15 feet bgs on the southern portion of the Property (just southwest of the residence at 730 Water Street and near the southwestern corner of the vacant lot) using a roto-hammer or a truck-mounted direct push drilling unit. Soil boring logs are included in Appendix B. Refer to *Figure 2 – Site Boring Location Map* for details of the boring locations.
- Collected a soil gas sample from each probe SG-1 through SB-6 at the terminal depth in these six locations, with the sample from each probe analyzed by a mobile laboratory. The soil gas sample from each probe was submitted to a mobile laboratory for chemical analysis of VOCs by U.S EPA Method 8260B. The analytical report is included in Appendix C.
- Collected a soil sample from the terminal depth of each boring SB-1 through SB-6 and collected soil samples from borings SB-7 and SB-8 at approximately 5-foot intervals. One selected soil sample from each soil boring was analyzed for VOCs by U.S. EPA Method 8260B; TPH-GRO, TPH-DRO, and TPH-ORO by U.S. EPA Method 8015B; and Title 22 metals by U.S. EPA Method 6010B/7470A. The analytical report is included in Appendix C.
- Preserved the collected soil samples in a cooler with ice at a sample preservation temperature of 4 degrees Celsius until samples were shipped to SunStar Laboratories (SunStar), a California State-certified environmental testing laboratory, for analysis. The samples were transported to the laboratory by a laboratory courier for select analyses using chain-of-custody protocols.
- Logged each soil boring using the Unified Soils Classification System under the supervision of ODIC's project geologist. Soil boring logs are included in Appendix B.

- Backfilled each boring SB-1 through SB-8 with Portland cement grout and soil with the surface conditions returned to their original condition (soil or asphalt) upon completion of soil gas and soil sampling activities.

4.2 Soil Boring Permit

A soil boring permit was obtained from the NCDPBES prior to performance of the fieldwork for advancement of the six soil gas probes (SG-1 through SG-6 and soil borings SB-1 through SB-8. Permit numbers E18-00946 and E18-00947 was approved on December 21, 2018. Notification was provided to the NCDPBES prior to the commencement of fieldwork. A copy of the permits are included in Appendix D.

4.3 Underground Utility Clearance/Site Survey

On December 19, 2108, under supervision and direction of ODIC, A-Plus Utility Locating's technician performed a subsurface utility investigation using electro-magnetic locating equipment to locate underground utility conflicts near proposed soil gas probes and soil boring locations. A-Plus Utility Locating's technician cleared proposed soil boring locations and marked the ground surface to identify utility conflicts at the proposed soil boring locations. The final boring locations were based on the location of the identified underground utilities. Descriptions of the equipment and methods used by A-Plus Utility Locating are summarized below.

Radio Detection RD-400/RD7000/RD8000: The Radio Detection RD-400/RD7000/RD8000 unit is a hand held magnetic gradiometer which detects the magnetic field caused by ferromagnetic objects. The unit produces an audible signal when it detects a variation in the magnetic field strength between the two sensors 14 inches apart. In an area of little magnetic debris it can detect metallic objects up to 10 feet deep.

Fisher TW-6 M-Scope: The Fisher TW-6 M-Scope is a split box inductive locator and metal detector mounted on a 4-foot rod. The split box locator can detect metal lines "inductively". The M-Scope is also used to detect buried metallic objects such as manhole covers, USTs, etc. The limit of detection for this unit is approximately 5 feet in depth.

4.4 Methodology

On December 26, 2018, TEG used a roto-hammer or truck-mounted direct-push drilling rig to install soil gas probes from the soil gas probes locations SG-1 through SG-6 and collect soil samples from soil boring locations SB-1 through SB-8. A site-specific Health and Safety plan was prepared, and a field safety meeting was held among field personnel and drilling crew prior to the start of drilling.

Soil Gas Sampling Method

At each soil gas sampling location, a stainless-steel probe was advanced to a depth of just over 5 feet bgs using a roto-hammer or a truck-mounted direct-push drilling rig (depending on access constraints). Flexible tubing was connected to a steel vapor tip coupled in an airtight seal to the end of the drive probe. The annular space around the tubing was filled with sand and sealed with hydrated bentonite to the surface to prevent leakage of ambient air into the soil gas sample. The time of probe placement at each location was documented in the field notes. The probes were left in place for at least 2 hours before collecting the soil gas samples.

A probe blank, syringe blank, and a duplicate soil gas sample were collected on December 26, 2018 for quality assurance purposes (see TEG's report in Appendix C).

After purging three volumes using a syringe, the soil gas samples were collected by TEG's chemist into 50 milliliter (ml) glass syringes using a shroud. The VOC 1,1-difluoroethane (1,1-DFA) was used as a leak check compound. Sample collection times are shown in TEG's report (Appendix C).

Soil Sampling Method

Soil samples were collected within acetate liners that measure 3 feet by 1 inch with a roto-hammer or a truck-mounted direct push drilling unit equipped with a Geoprobe Sampler that measures 3 feet by 1 inch and is capable of recovering discrete samples from specified locations. The liner for the Geoprobe Sampler is a thin-walled tube that fits inside the bore sample stainless steel probe and facilitates retrieval of the sample and may be used for storage when applicable. Each Geoprobe Sampler liner was cut using a hack saw. The ends of each liner were capped with Teflon® tape and plastic caps. No headspace was present in the tube once the sample was collected and the tube capped at each end. Soil samples were labeled and packed in an ice-cooled chest to minimize potential volatilization prior to delivery to the laboratory.

The collected soil samples were labeled with the boring number, the sample number (the samples were numbered sequentially with increasing depth from the top for each boring), and the sampling depth. Care was taken throughout to avoid contamination of both the inside and outside of the sample container and its contents.

Prior to selecting the sample interval to be used for preservation, the soil in the acetate liner was visually inspected for discoloration, monitored for odors, classified according to the Unified Soil Classification System, placed in a sealable plastic bag, and field-screened with a photoionization detector (PID). ODIC's field technician monitored soil samples for evidence of odor and discoloration and recorded PID readings to evaluate the presence of elevated volatile organics concentrations. The field data were recorded on the field log. Soil boring logs are included in Appendix B.

The collected soil samples were preserved in an ice-cooled chest to maintain a sample preservation temperature of 4 degrees Celsius and, on the same day as sample collection, shipped for analysis to SunStar Laboratories, a California State-certified environmental testing laboratory. U.S. EPA-approved chain-of-custody records were maintained with the samples to track the possession of samples from the time they were collected in the field until the time they were analyzed by the laboratory.

4.5 Backfill

Upon completion of sampling activities in sampling locations SG-1 through SG-6 and borings SB-1 through SB-8, the lower portion of each borehole was backfilled with Portland cement grout with the upper portion (approximately 2 to 3 feet) backfilled with soil cuttings from the borehole. Each borehole located in asphalt pavement was restored to pre-drilling condition by applying patching materials.

4.6 Laboratory Analysis

The soil gas samples were analyzed on site by TEG's chemist using TEG's mobile laboratory and the soil samples were transported to SunStar Laboratories in West Sacramento, California for chemical analysis. SunStar is a California State-certified environmental testing laboratory. The ODIC field personnel collecting the soil samples initiated the chain-of-custody documentation.

Soil gas samples were analyzed for limited-list VOCs by U.S. EPA Method 8260B.

Soil samples were analyzed for TPH-GRO, TPH-DRO, and TPH-ORO by U.S. EPA Method 8015B, full-list VOCs by U.S. EPA Method 8260B, and Title 22 metals by U.S. EPA Method 6010B/7470A.

The laboratory analytical reports of the soil gas and soil samples are included in Appendix C. Results are presented in Section 5.3 and Section 5.4.

5.0 FINDINGS AND RESULTS

5.1 Subsurface Conditions

- Collected soil samples consisted of silty clay from below the asphalt pavement and baserock to the maximum depth explored of 15 feet bgs.
- Field indications (staining, odor, and PID readings) of impact from VOCs and/or petroleum hydrocarbons were not documented in the soil borings.
- Groundwater was not encountered during drilling to the maximum depth explored of 15 feet bgs during drilling. Depth to groundwater in the vicinity of the Property was reported at approximately 10 feet bgs (refer to Section 3.2 for hydrogeology information).

5.2 Evaluation Criteria

Soil gas and soil analytical results were compared to the potentially applicable criteria listed below.

- SFB RWQCB (2016 [Rev. 3]). San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) *2016 Tier 1 Environmental Screening Levels Summary* February 2016 (Rev. 3).
- USEPA (2018). United States Environmental Protection Agency (USEPA), *Regional Screening Level (RSL) Composite Worker Soil Table*. November 2018.
- DTSC. 2014. *HERD Soil Gas Screening Model, Screening Level Implementation of the Johnson and Ettinger Vapor Intrusion Model - Reverse Calculation of Target Media Concentrations, December 2014*
- DTSC. 2014a, *Screening Level Johnson and Ettinger Model for Soil Gas contamination (Updated December 2014*

Supplemental comparison criteria are identified as applicable.

5.3 Analytical Results of Soil Gas Samples

VOCs in Soil Gas

Concentrations of VOCs detected above their respective laboratory reporting limits (RLs) in the soil gas samples were limited to the following (refer to *Table 1 – Soil Gas Analytical Results for VOCs*):

- PCE was detected in five samples, SG-1 through SG-5, at concentrations of 210 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) to 14,000 $\mu\text{g}/\text{m}^3$. The PCE concentrations in soil gas samples SG-1 through SG-4 are above the SFB RWQCB Tier 1 Environmental Screening Level (ESL) value of 240 $\mu\text{g}/\text{m}^3$ which is for the residential land use scenario while the PCE concentration in soil gas sample SG-5 is below the Tier 1 ESL value. PCE in samples SG-1 and SG-2 was also above the commercial/industrial land use ESL of 2,100 $\mu\text{g}/\text{m}^3$. U.S. EPA has not established Regional Screening Levels (RSL) for soil gas.
- TCE was detected in two samples, SG-1 and SG-2, at concentrations up to 2,900 $\mu\text{g}/\text{m}^3$. The TCE concentrations are above the Tier 1 ESL value of 240 $\mu\text{g}/\text{m}^3$ which is for the residential land use scenario but below the commercial/industrial land use ESL of 3,000 $\mu\text{g}/\text{m}^3$.

The breakdown products of PCE and TCE (cis-1,2-dichloroethene [cis-1,2-DCE], trans-1,2-DCE, and vinyl chloride) were not detected in the soil gas samples at concentrations at or above their respective laboratory RL. The laboratory RLs for cis-1,2-DCE and trans-1,2-DCE were below their respective Tier 1

ESL. The laboratory RL of 100 µg/m³ for vinyl chloride are above the corresponding Tier 1 ESL of 4.7 µg/m³ but below the corresponding commercial/industrial land use ESL of 160 µg/m³.

VOCs benzene, toluene, ethylbenzene, and xylenes were not detected in soil gas samples at concentrations at or above their respective laboratory RLs. The laboratory RLs for these compounds are below their respective Tier 1 ESL values except for benzene. The laboratory RL of 100 µg/m³ for benzene is above the respective Tier 1 ESL value of 48 µg/m³ but below the respective commercial/industrial land use ESL of 420 µg/m³.

Risk Assessment

Detections of PCE and TCE exceeded the screening criteria and to further evaluate potential human health risk due to subsurface vapor intrusion into the building space at the Property, ODIC prepared this Human Health Risk Assessment in general accordance with the procedures and methodologies in relevant guidance documents from the DTSC and EPA, by using DTSC Human and Ecological Risk Division (HERD) modified Johnson and Ettinger (J&E) soil vapor screening model (revised March 2014). The J&E model is used to estimate human health risks from subsurface vapor intrusion into theoretical buildings by estimating indoor air concentrations, and also to determine the Incremental Lifetime Carcinogenic Risk (ILCR) associated with exposure to target contaminants in indoor space from subsurface vapor intrusion and Hazard Quotient/Index (HQ/HI) for chemicals of concern.

ODIC used the detected concentrations of VOCs in soil vapor collected as part of this limited subsurface investigation, and estimated the indoor air concentrations and risks/hazards using J&E model and site-specific data. In addition, ODIC calculated chemical intake values and Exposure Point Concentrations (EPC) based on calculated indoor air concentrations from J&E model and site-specific data, to estimate Incremental Lifetime Carcinogenic Risk (ILCR).

For non-carcinogenic risk value, ODIC used the Reference Concentration in air (RfC) for a chemical and a Unit Risk Factor (URF) to calculate Hazard Quotient (HQ). Non-cancer hazards resulting from inhalation of VOCs in indoor air was estimated using the following equation (USEPA, 2009): $HQ = EC/RfC$. The Reference Concentration in air (RfC) for a chemical is a daily exposure level for a human that is not expected to result in an adverse non-carcinogenic health effect. A Unit Risk Factor (URF) for a chemical is an expression of the toxicity of that particular chemical to cause cancer, and represents the probability (or risk) of the chemical to cause cancer after a lifetime of exposure.

As with the case of carcinogenic effects, the potential additivity of non-carcinogenic hazards due to exposure to multiple substances is quantified as a Hazard Index (HI), which is the sum of all possible chemical specific HQs (USEPA, 1989).

A primary objective of the J&E model is to use conservative exposure parameters provided by U.S. EPA and DTSC so as not to underestimate potential human health risks. For site-specific soil type, default values of soil dry bulk density, soil total porosity, and soil water filled porosity default values are used for vadose zone soil properties. Default RfC and URF toxicity criteria for each detected VOC are used in J&E model.

According to the USEPA, when evaluating estimated cancer risks or Incremental Lifetime Carcinogenic Risk (ILCR) associated with exposure to target contaminants in indoor space from subsurface vapor intrusion for decision-making purposes, an acceptable excess cancer risk is equal to or less than one-in-one million (1.0E-06) for unrestricted land use. This threshold is recognized as acceptable by the USEPA and represents a probability of one-in-one million that an individual could develop cancer from exposure to a carcinogen (or group of carcinogens) under various exposure assumptions. A calculated excess cancer risk falling between 1.0E-06 and one-in-ten thousand (1.0E-04) is considered by the United States EPA to be a *risk management range* and where risk management decisions are made on a site-specific basis.

A one-in-one hundred thousand (1.0E-05) excess cancer risk is typically recognized by Federal and State agencies as acceptable in commercial/industrial scenarios. If risk exceeds one-in-ten thousand (1.0E-04), it is assumed to pose an adverse risk to human health, and source remediation and/or vapor intrusion mitigation may be considered warranted. In California, under the Proposition 65 program, the “no significant risk level” represents the daily intake level calculated to result in a cancer risk not exceeding one excess case of cancer in 100,000 individuals (1E-05) exposed over a 70-year period to warn the public of potential carcinogens in everyday products (Cal-EPA, 2013c). The results of this HHRA are interpreted within the context of the regulatory and public health perspective of acceptable cancer risks and non-cancer hazards from controllable sources of exposure.

When evaluating the hazard potential posed by chemicals for non-carcinogenic effects, a HI (or HQ for a single compound) less than 1.0 (unitless) is considered unlikely to pose significant non-carcinogenic adverse health effects to individuals under the exposure conditions, and a no further action response is supported. When the HI exceeds 1.0, further evaluation of the source and/or response action to mitigate the source and vapor intrusion may be needed.

It should be noted that the model assumes an infinite contaminant source and that vapor flux through the subsurface occurs only by one-dimensional diffusion (upward) to the base of the building foundation. Diffusive flow through the subsurface is simulated using common vapor flux equations controlled by the assigned soil Property variables.

Convection carries the mass through simulated cracks and openings in the foundation into the structure. Presumed air movement in the building causes the convective sweep from heating/cooling, stack, and wind effects. Both diffusive and convective transports are assumed to be uniform and steady state. The model does not account for attenuation factors such as biodegradation or adsorption during transport to the base of the building.

The model treats the entire building as a single chamber with instantaneous and homogeneous vapor dispersion. It therefore neglects contaminant sinks and room-to-room variations in vapor concentrations due to unbalanced mechanical or natural ventilation. Once a representative concentration is determined, the vapor mass directly below the areal extent of the structure is presumed to enter the structure, and since the mass is considered infinite, steady state transport prevails and the intrusion rate remains constant.

Further, the input parameters used in the J&E soil vapor model are conservative (assumes no biodegradation or other vapor loss mechanisms or building air exchange) and likely result in an overestimation of potential lifetime cancer risk. PCE was included in the J&E soil vapor model.

Maximum detections of PCE and TCE were found to exceed the DTSC calculated screening values. Given this situation, a screening-level Johnson and Ettinger vapor intrusion model was run to calculate potential carcinogenic risk and hazard index for the maximum detections.

The results for the maximum PCE and TCE detections are depicted in the tables below. Portions of the property use used for residential purposes, so the most conservative residential use scenario was used in the model.

Residential Scenario

| Chemical | Soil Type | Maximum Detected Concentration (µg/l) and depth (feet bgs) | Carcinogenic Risk | Hazard Quotient |
|-----------------|------------------|---|--------------------------|------------------------|
| PCE | Sand | 14,000 µg/m ³ at 5' depth (SG2) | 3.0E-05 | 0.39 |
| TCE | Sand | 2,900 µg/m ³ at 5' depth (SG2) | 5.1E-06 | 1.7 |

The calculated cumulative carcinogenic risk and hazard quotient results are presented below. In cases such as this where more than one VOC is present in soil vapor at a given depth, the carcinogenic risk and hazard quotient for each VOC is calculated individually and then summed to arrive at a cumulative risk.

Summary of J&E Model Results Residential Scenario

| Chemical | Input Concentration (µg/m ³) (Maximum at 5 feet bgs) | Carcinogenic Risk | Hazard Quotient |
|--------------------------------------|---|-------------------------------------|-----------------|
| PCE | 14,000 | 3.0E-05 | 0.39 |
| TCE | 2,900 | 5.1E-06 | 1.7 |
| Cumulative Risk | | 3.5E-05 | 2.09 |
| Acceptable Risk for Unrestricted Use | | 1E-06 or (1 x 10 ⁻⁶) | 1.0 |

As shown above, using the highest concentrations of PCE and TCE in soil vapor samples detected at 5 feet bgs, the J&E model for the residential use scenario resulted in a cumulative incremental lifetime carcinogenic risk (ILCR) value of 3.5E-05, and a cumulative non-carcinogenic hazard index of 2.1, which are significantly above their risk thresholds of 1E-06 and 1.0, respectively. Based on the evaluation presented herein, the existing data set and test results suggest that there is a potential risk of vapor intrusion into the site structure or health hazard to the indoor occupants in a residential use scenario.

A portion of the Property is used for commercial purposes, and therefore for illustrative purposes, the following evaluation was conducted with the commercial use scenario.

Commercial Scenario

| Chemical | Soil Type | Maximum Detected Concentration (µg/l) and depth (feet bgs) | Carcinogenic Risk | Hazard Quotient |
|----------|-----------|---|-------------------|-----------------|
| PCE | Sand | 14,000 µg/m ³ at 5' depth (SG2) | 3.5E-06 | 0.046 |
| TCE | Sand | 2,900 µg/m ³ at 5' depth (SG2) | 5.9E-07 | 0.2 |

The calculated cumulative carcinogenic risk and hazard quotient results are presented. In cases such as this where more than one VOC is present in soil vapor at a given depth, the carcinogenic risk and hazard quotient for each VOC is calculated individually and then summed to arrive at a cumulative risk.

Summary of J&E Model Results Commercial Scenario

| Chemical | Input Concentration (µg/m ³) (Maximum at 5 feet bgs) | Carcinogenic Risk | Hazard Quotient |
|------------------------------------|---|-------------------------------------|-----------------|
| PCE | 14,000 | 3.5E-06 | 0.046 |
| TCE | 2,900 | 5.9E-07 | 0.2 |
| Cumulative Risk | | 4.1E-06 | 0.3 |
| Acceptable Risk for Commercial Use | | 1E-05 or (1 x 10 ⁻⁵) | 1.0 |

As shown above, using the highest concentrations of PCE and TCE in soil vapor samples detected at 5 feet bgs, the J&E model for the commercial use scenario resulted in a cumulative incremental lifetime carcinogenic risk (ILCR) value of 4.1E-06, and a cumulative non-carcinogenic hazard index of 0.3, which are below their risk thresholds of 1E-05 and 1.0, respectively. Based on the evaluation presented herein, the existing data set and test results suggest that there is a low risk of vapor intrusion into the site structure or health hazard to the indoor occupants in a commercial use scenario. This only applies to the commercial portion of the Property.

5.4 Analytical Results of Soil Samples

TPH as GRO, DRO, and ORO in Soil

Concentrations of petroleum hydrocarbons detected above their respective laboratory RLs in the soil samples analyzed were limited to the following (refer to *Table 2 – Soil Analytical Results for TPH and VOCs*):

- Diesel (TPH-DRO) was detected in each of the two soil samples, SB-6-5 and SB-8-5, at concentrations of 19 milligrams per kilogram (mg/kg) and 21 mg/kg, respectively. The concentrations are below the Tier 1 ESL value for TPH-DRO of 230 mg/kg.
- Motor oil (TPH-ORO) was detected in each of the two soil samples, SB-6-5 and SB-8-5, at concentrations of 200 mg/kg and 240 mg/kg, respectively. The concentrations are below the Tier 1 ESL value for TPH-DRO of 5,100 mg/kg.

Gasoline (TPH-GRO) was not detected in the two soil samples, SB-6-5 and SB-8-5, submitted for TPH-GRO analysis at concentrations at or above the laboratory RLs of 0.5 mg/kg and 0.49 mg/kg, respectively. The laboratory RLs are below the Tier 1 ESL value for TPH-GRO of 100 mg/kg.

VOCs in Soil

Concentrations of VOCs detected above their respective laboratory RLs in the soil samples analyzed were limited to the following (refer to *Table 2 – Soil Analytical Results for TPH and VOCs*):

- PCE was detected in two samples, SB-2-5 and SB-3-5, at a concentration of 10 micrograms per kilogram ($\mu\text{g}/\text{kg}$) and 25 $\mu\text{g}/\text{kg}$, respectively. The PCE concentrations are below the Tier 1 ESL value of 420 $\mu\text{g}/\text{kg}$ and the U.S. EPA Regional Screening Level (RSL) value of 390,000 $\mu\text{g}/\text{kg}$.

The fuel constituent VOCs benzene, toluene, ethylbenzene, and xylenes were not detected in soil samples tested at concentrations at or above their respective laboratory RLs. The laboratory RLs for these compounds are below their respective Tier 1 ESL values and U.S. EPA RSL values.

Title 22 Metals in Soil

Concentrations of metals detected above their respective laboratory RLs in the soil samples analyzed were limited to the following (refer to *Table 3 – Soil Analytical Results for Metals*):

- Arsenic was detected at a concentration of 5.9 mg/kg in sample SB-8-5. This concentration exceeds arsenic's Tier 1 ESL value of 0.067 mg/kg but is below its RSL value of 480 mg/kg. The laboratory RL of 5 mg/kg exceeds arsenic's Tier 1 ESL value of 0.067 mg/kg but is below the respective EPA RSL value of 480 mg/kg.
- Barium was detected in each soil sample tested at concentrations of 86 mg/kg in sample SB-6-5 to 270 mg/kg in sample SB-8-5. These concentrations are below barium's Tier 1 ESL value of 3,000 mg/kg and EPA RSL value of 220,000 mg/kg.
- Chromium (reported as total chromium) was detected in each soil sample tested at concentrations of 17 mg/kg in sample SB-6-5 to 46 mg/kg in sample SB-8-5. These concentrations are below chromium III's Tier 1 ESL value of 120,000 mg/kg and EPA RSL value of 1,800,000 mg/kg and chromium VI's EPA RSL value of 3,500 mg/kg, but above chromium VI's Tier 1 ESL value of 0.3 mg/kg.
- Cobalt was detected in each soil sample tested at concentrations of 5.5 mg/kg in sample SB-6-5 to 15 mg/kg in sample SB-8-5. These concentrations are below cobalt's Tier 1 ESL value of 23 mg/kg and EPA RSL value of 350 mg/kg.

- Copper was detected in each soil sample tested at concentrations of 5.8 mg/kg in sample SB-6-5 to 34 mg/kg in sample SB-8-5. These concentrations are below copper's Tier 1 ESL value of 3,100 mg/kg and EPA RSL value of 47,000 mg/kg.
- Lead was detected in each soil sample tested at concentrations of 6.9 mg/kg in sample SB-6-5 to 170 mg/kg in sample SB-8-5. The concentration in sample SB-6-5 is below lead's Tier 1 ESL value of 80 mg/kg and EPA RSL value of 800 mg/kg; the concentration in sample SB-8-5 is above lead's Tier 1 ESL value of 80 mg/kg but below its EPA RSL value of 800 mg/kg.
- Mercury was detected in one sample tested at a concentration of 0.49 mg/kg in sample SB-8-5. This concentration is below mercury's Tier 1 ESL value of 13 mg/kg and its EPA RSL value of 46 mg/kg. The laboratory RL of 0.1 mg/kg for sample SB-6-5 is below mercury's Tier 1 ESL value of 13 mg/kg and RSL value of 46 mg/kg.
- Nickel was detected in each soil sample tested at concentrations of 15 mg/kg in sample SB-6-5 and 70 mg/kg in sample SB-8-5. These concentrations are below nickel's Tier 1 ESL value of 86 mg/kg and EPA RSL value of 8,100 mg/kg.
- Vanadium was detected in each soil sample tested at concentrations of 27 mg/kg in sample SB-6-5 to 40 mg/kg in sample SB-8-5. These concentrations are below vanadium's Tier 1 ESL value of 390 mg/kg and EPA RSL value of 5,800 mg/kg.
- Zinc was detected in each soil sample tested at concentrations of 68 mg/kg in sample SB-6-5 to 210 mg/kg in sample SB-8-5. These concentrations are below zinc's Tier 1 ESL value of 23,000 mg/kg and EPA RSL value of 350,000 mg/kg.

Concentrations of metals not detected above their respective laboratory RLs in the soil samples analyzed were limited to the following (refer to *Table 3 – Soil Analytical Results for Metals*):

- Antimony was not detected in the soil samples tested at concentrations at or above the laboratory RL of 3 mg/kg. The laboratory RL is below antimony's Tier 1 ESL value of 31 mg/kg and EPA RSL value of 470 mg/kg.
- Beryllium was not detected in the soil samples tested at concentrations at or above the laboratory RL of 1 mg/kg. The laboratory RL is below beryllium's Tier 1 ESL value of 42 mg/kg and EPA RSL value of 2,300 mg/kg.
- Cadmium was not detected in the soil samples tested at concentrations at or above the laboratory RL of 2 mg/kg. The laboratory RL is below cadmium's Tier 1 ESL value of 39 mg/kg and EPA RSL value of 980 mg/kg.
- Molybdenum was not detected in the soil samples tested at concentrations at or above the laboratory RL of 5 mg/kg. The laboratory RL is below molybdenum's Tier 1 ESL value of 390 mg/kg and EPA RSL value of 5,800 mg/kg.
- Selenium was not detected in the soil samples tested at concentrations at or above the laboratory RL of 5 mg/kg. This laboratory RL is below selenium's Tier 1 ESL value of 390 mg/kg and EPA RSL value of 5,800 mg/kg.
- Silver was not detected in the soil samples tested at concentrations at or above the laboratory RL of 2 mg/kg. This laboratory RL is below silver's Tier 1 ESL value of 390 mg/kg and EPA RSL value of 5,800 mg/kg.
- Thallium was not detected in the soil samples tested at concentrations at or above the laboratory RL of 2 mg/kg. This laboratory RL is above thallium's Tier 1 ESL value of 0.78 mg/kg but below its' EPA RSL value of 230 mg/kg.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 SOIL GAS CONDITIONS

VOCs in Soil Gas

PCE and TCE were the only VOCs detected in the soil gas samples. PCE and TCE were detected above the screening level (Tier 1 ESL) in the sample (SG-1) located in the yard of the residence addressed 711 1st Street (on the northeastern corner of the Property) and in the sample (SG-2) located in the driveway to the east of the commercial building. PCE was also detected above the screening level (Tier 1 ESL) in the two samples (SG-3 and SG-4) located to the south of the commercial building. PCE was detected below the screening level (Tier 1 ESL) in the sample (SG-5) located to the west of the commercial building. The commercial building reported housed dry-cleaning tenants in the past.

Out of a total of eight sample locations, the fuel constituent VOC benzene was not detected, but at an elevated laboratory RL. The detections of benzene could be as high as $100 \mu\text{g}/\text{m}^3$, which would exceed the Tier 1 ESL value of $48 \mu\text{g}/\text{m}^3$, the most conservative value and is based upon a residential use scenario. However, these detections would be below the respective commercial/industrial land use ESL of $420 \mu\text{g}/\text{m}^3$.

A cursory Risk Assessment using the modified Johnson and Ettinger (J&E) soil vapor screening model estimate for human health risks from subsurface vapor intrusion was conducted as detailed in Section 5.3. A portion of the Property is used for residential and the results of the residential scenario analysis indicate the maximum soil vapor concentrations for PCE and TCE produce a calculated carcinogenic risk from vapor intrusion approximately one order of magnitude above the risk threshold of $1\text{E}-6$ and a non-cancer hazard quotient from vapor intrusion approximately twice the risk threshold 1.0 at a depth of 5 feet. Based on the evaluation presented herein, there is a potential risk of vapor intrusion resulting in an incremental lifetime carcinogenic risk exceeding $1.0\text{E}-06$ which is a threshold level typically considered acceptable for an unrestricted residential use. It should be noted that the governing risk values are driven under the residential use scenario, since the current use of the Property includes both residential and commercial.

A portion of the Property is also used for commercial purposes, and as such, ODIC calculated an incremental lifetime carcinogenic risk (ILCR) as well as a non-cancer hazard quotient (HQ) in a commercial scenario. ILCR and HQ from an inhalation exposure to the maximum detected soil vapor concentrations of PCE and TCE are lower than the threshold level of $1.0\text{E}-5$ and 1.0, respectively, at depth of 5 feet, indicating a low risk of vapor intrusion into the commercial building or health hazard to the indoor occupants in a commercial use scenario. A one-in-one hundred thousand ($1.0\text{E}-05$) excess cancer risk is typically recognized by Federal and State agencies as acceptable in commercial/industrial scenarios.

Summary

ODIC therefore concludes that the detections of PCE and TCE indicate a release in the area, likely from the former dry-cleaning tenant, and there is a potential risk of vapor intrusion resulting in an incremental lifetime carcinogenic risk exceeding $1.0\text{E}-06$ and hazard quotient higher than 1.0 in a residential scenario. Additionally, for future assessments, lower laboratory detection limits should be used to further assess benzene levels in soil gas.

6.2 SOIL CONDITIONS

TPH as GRO, DRO and ORO in Soil

Two samples from two borings SB6 and SB8 located at the vacant lot at the western portion of the Property had detections of TPH-DRO and TPH-ORO at relatively low concentrations, significantly below the Tier 1 ESL values. TPH-GRO was not detected in the two soil samples at concentrations at or above the laboratory RLs, with none of the laboratory RLs exceeding the Tier 1 ESL value of 100 mg/kg.

Summary

ODIC therefore concludes that TPH in soil in the areas investigated do not represent a significant environmental risk or hazard based on site observations and analytical data.

VOCs in Soil

PCE was the only VOC detected in the soil samples analyzed and was detected in two samples at low concentrations, significantly below the Tier 1 ESL value. The Tier 1 ESL value represents the potential for the contaminant to migrate downward and negatively impact the groundwater quality. The PCE was found in the eastern portion of the Property.

The fuel constituent VOC benzene was not detected in the two soil samples at concentrations at or above the laboratory reporting limit.

Summary

ODIC therefore concludes that the detections of PCE in soil indicate a likely release from the former dry-cleaning tenant.

Title 22 Metals in Soil

Detected concentrations of Title 22 metals in the soil samples analyzed were below regulatory screening levels except for arsenic, which showed a detected concentration of 5.9 mg/kg, and lead, which showed detected concentrations of 6.9 mg/kg and 170 mg/kg.

In regard to the arsenic detections, an independent study conducted at 14 Air Force installations across California (Hunter, et al, "Inorganic Chemicals in Ground Water and Soil: Background Concentrations at California Air Force Bases", March 10, 2005) determined that the 95th percentile of arsenic in the upper 3 feet of soil (considered a good representation of background concentrations) is 12.7 mg/kg

This independent study resulted in similar conclusions regarding arsenic in natural soil as compared to anthropogenic sources. Using the criteria presented in these studies, 12 mg/kg is a defensible background level for arsenic in soil. As such, 12 mg/kg has been widely accepted by regulatory agencies as the cleanup goal concentration for anthropogenic and naturally occurring levels of arsenic in soil in California. The detected concentration of arsenic in one soil sample is significantly below what is typically accepted as a natural background soil concentration.

The soil samples analyzed for arsenic had concentrations and laboratory RLs well below the 12 mg/kg background level for arsenic in soil. The highest concentration of arsenic was 5.9 mg/kg, significantly below what is typically accepted as a natural background soil concentration. Based on the foregoing, detected arsenic concentration is not likely an indicator of significant environmental risk. Based on prior experience with elevated arsenic at similar sites, ODIC opines that the detected arsenic concentrations

are representative of background conditions and are not resultant from past use of the Site. It is therefore concluded that detected concentrations of arsenic in soil in the areas investigated do not represent a significant environmental risk or hazard.

The detected lead concentration (6.9 mg/kg) in the sample (SB-6-5) from the northwestern corner of the vacant lot (western portion of the Property) was well below regulatory screening levels but the lead concentration (170 mg/kg) in the sample (SB-8-5) from the southwestern corner of the vacant lot was above the Tier 1 ESL which represents the health risk of direct exposure to the contaminant in a residential land use scenario but below the commercial/industrial land use ESL of 320 mg/kg and the RSL of 800 mg/kg.

Summary

Lead was the only metal of potential concern based upon a single detection at a location in a vacant lot on the western portion of the Property, which is designated for commercial use. This detected lead appears to be isolated and does not exceed the commercial screening levels. The absence of pavement/hardcover at the surface means that there are complete exposure pathways of ingestion, inhalation or dermal contact. However, with the lead detections below the ESLs, there is low risk to human health and environment as long as the use and configuration of the vacant lot remain unchanged. It should be noted that in a residential-use scenario of the lot, there would be a risk to human health and the environment.

The source for the single soil sample with the elevated concentration of lead in soil matrix sampled on the commercial vacant lot is unknown but could potentially be related to lead-based paint on former structures on this portion of the Property.

ODIC therefore concludes that metals in soil in the areas investigated do not represent a significant environmental risk or hazard based on site observations and analytical data, as long as the use and configuration remain unchanged.

6.3 CONCLUSIONS AND RECOMMENDATIONS

Based on the results and findings presented in this report, there is evidence of impacts in the areas investigated around the on-site commercial building. The presence of PCE and/or TCE in soil gas and soil around the commercial building would be consistent with a release from dry-cleaning operations by past site tenants. The levels of PCE and/or TCE reported in four of the soil gas samples to the east and south of the commercial building are above the Tier 1 ESLs, the most conservative screening values, and the levels of PCE reported in the two soil gas samples to the east of the commercial building are also above the respective commercial/industrial land use ESL.

There is a potential risk of vapor intrusion resulting in an incremental lifetime carcinogenic risk and non-cancer hazard exceeding threshold levels typically considered acceptable for an unrestricted residential use.

Groundwater was expected to be encountered at depth of approximately 10 feet, but during this investigation groundwater was not encountered at the maximum exploratory depth of 15 feet. It is unlikely that contamination found in the shallow samples has impacted the groundwater, but the vertical extent of chlorinated organic solvents, particularly PCE, in soil gas and soil matrix has not been defined.

The source for the single soil sample with the elevated concentration of lead in soil matrix sampled on the commercial vacant lot is unknown but could potentially be related to lead-based paint on former structures on this portion of the Property. Lead in soil was detected at a concentration of 170 mg/kg in the sample (SB-8-5) from the southwestern corner of the vacant lot, which is above the Tier 1 ESL for direct exposure to the contaminant in a residential land use scenario but below the commercial/industrial land

use ESL of 320 mg/kg and the EPA Region 9 Screening Level of 800 mg/kg. Background concentrations of lead could vary significantly across the area and should be evaluated against regulatory standards applicable to planned future use (residential versus commercial/industrial).

There is no pavement or hardscape surface cover in the area where the elevated concentration of lead was detected, thereby a direct exposure pathway to human receptors can be complete. Although the lead detections are below the commercial land use screening criteria, given the unhindered access to the contaminated soil by children and other human receptors, the Client is advised to consider removing the impacted soils in order for the exposure pathways of lead impacted soils to become incomplete.

This report is to be submitted to the NCDPBES in accordance with the drilling permit requirements.

6.4 *FUTURE CONSTRUCTION AND RISK MITIGATION*

ODIC was made aware that the entire Property would be redeveloped into a commercial complex consisting of retail buildings overlying subterranean parking structures. Since the Project is currently in a conceptual design stage, detailed use and configuration of the future improvements have yet to be finalized. However, the future development is designed to feature at least one level of underground parking beneath at least the entire footprint of the current commercial building, where the final depth of excavation for the entire Property area is expected to be approximately 15' below ground surface (bgs).

The basement parking level is to be open to ambient air, thus a potential risk of vapor intrusion from detected concentrations of PCE and TCE in the subsurface beneath the former dry-cleaning area to degrade indoor air quality of the future commercial occupants on the ground level is mitigated, as typical subterranean parking structures are designed to accommodate sufficient air volumes to be exchanged, and more than 12 feet of vertical clearance will be provided between the base of the underground parking level and the ground floor of the retail commercial building.

The final grading plan or excavation plan has not yet been developed. However, based on the preliminary site development plans, it appears that project grading and excavation will occur on the majority of the Property to a depth of approximate 15' bgs. Planned development site plans are attached to this Report in Appendix E.

Therefore, the areas impacted with lead at 5' bgs will be subjected to excavation and removal, posing no potential risk or hazard to the future occupants.

In the unlikely event that the current design plan changes, areas where carcinogenic risks and non-carcinogenic hazards exceed the levels typically recognized by Federal and State agencies as acceptable for unrestricted land use should be subject to environmental covenant or institutional controls.

Prior to commencing grading and soil excavation activities, a Soil Management Plan, a Health and Safety Plan and a Human Health Risk Assessment to Construction Workers should be prepared to ensure that contaminants of concern discussed in this Report do not pose an adverse carcinogenic risks and health hazards to future construction and utility workers, and also to comply with the requirements of the regulatory oversight authorities.

SITE PHOTOGRAPHS

APPENDIX A
SITE PHOTOGRAPHS

Sample location SG-1/SB-1.

Drilling rig set up on sample location SG-2/SB-2.

Drilling rig set up on sample location SG-4/SB-4.

Drilling rig set up on boring SB-5.

Drilling rig set up on sample location SG-6/SB-6.

Placing liner in probe at boring SB-7.

Sampling at SB-8.

Constructed soil gas sampling point at SG-4.

Collecting soil gas sample at SG-4.

Soil gas sampling equipment.

Backfilled probe and borehole at SG-2/SB-2.

Backfilled probes and boreholes at SG-3/SB-3.

Subject: Re: Work Order Confirmation for 1rst Street - Napa (T183830)

Hello Joann and Bill,

Thank you for this confirmation. Per my conversation with Bill earlier, after reviewing the COC, I would like to ask that fuel oxygenates not be reported for the 8260 samples. Fuel oxygenates are not a concern for this investigation, and only the standard list of VOCs are of concern (plus TPH and Title 22 Metals for the samples already indicated in the COC). Could I receive confirmation that the fuel oxygenates will not be reported and that Odic will not be charged for the fuel oxygenates? Thank you very much.

Nathan/Lita,

Please find attached the work order and chain of custody for the samples we received:

Project: 1rst Street - Napa

Project Number: 6366822

Due Date: 1/4/19

Please carefully review the work order to ensure the Analysis, Due Date, and Turn Around Time (TAT) are accurate. If you have any questions or concerns, please feel free to contact me.

Thank you for choosing Sunstar! We appreciate your business!

Best regards,

Shipping Alert:

Please note that SunStar Laboratories will be observing the upcoming Christmas and New Year's holidays on December 24th, 25th, and January 1st. We will be closed on Monday and Tuesday for Christmas Eve and Christmas day as well as Tuesday, New Year's Day. In addition, GSO will not have scheduled service on these days. If you have any short hold samples arriving near or during these days, please contact your Project Manager in advance to ensure all holding times are met for your samples.

We appreciate your business and hope that you have a wonderful and safe holiday!

Los Angeles, CA 90010

**SUBJECT: DATA REPORT - Odic Environmental & Energy Project # 6366822
711-731 1st Street, Napa, California**

TEG Project # 81226F

Mr. Yao:

Please find enclosed a data report for the samples analyzed from the above referenced project for Odic Environmental & Energy. The samples were analyzed on site in TEG's mobile laboratory. TEG conducted a total of 9 analyses on 9 soil vapor samples.

-- 9 analyses on soil vapors for volatile organic hydrocarbons by EPA method 8260B.

The results of the analyses are summarized in the enclosed tables. Applicable detection limits and calibration data are included in the tables.

TEG appreciates the opportunity to have provided analytical services to Odic Environmental & Energy on this project. If you have any further questions relating to these data or report, please do not hesitate to contact us.

Sincerely,

Mark Jerpbak
Director, TEG-Northern California

| Owner: | FOXBOW DEVELOPMENT LLC ETAL | Phone: | (213) 380-0090 |
| Address: | 485 TECHNOLOGY WY NAPA CA 94558 | | |
| Applicant: | Nathan Yao | Phone: | (213) 380-0090 |
| Business Name: | Odic Environmental | License #: | C75083 |

Project Type: Soil Borings

Type of Investigation: Phase 2 **Number of Borings:** 6

LOP Site Number:

Are all borings covered by this application on a single parcel and not on adjoining parcels or public or utility rights-of-way?
Yes No

Is an Encroachment Permit Required? No

Encroachment Permit Number:

Is Worker's Compensation insurance confirmed? **Expires:**

Disposal Methods

| | | | |
|-----------------------|-------------|-----------------------------------|-------------|
| Soil Cuttings: | Left Onsite | Development/Rinsate Water: | Left Onsite |
|-----------------------|-------------|-----------------------------------|-------------|

Specifications

| | | | |
|----------------------------------|-----------|-----------------------|-------------|
| Bore Hole Diameter: | 2.25 | Depth of Seal: | N/A |
| Maximum Depth: | 10.00 | Type of Grout: | Neat Cement |
| Method of Seal Placement: | Free-Fall | Other: | |

TO PERMITEE:

Any work performed or operations conducted under the auspices of this permit constitutes acceptance of all conditions, inspections and comments contained in the this permit, and the incorporation of all requirements as set forth in the permit application.

Technical Memo

Date: January 15, 2018
To: Jeremy Sill, P.E., RSA⁺
From: Jake Gusman, P.E., and Darren Bertrand, River Focus, Inc.
Subject: Floodplain Analysis – First and Oxbow Hotel

Background

The First and Oxbow Hotel project, located in the City of Napa, is bordered by First Street to the north, the Napa River and Water Street to the south, an existing residence to the east, and Soscol Avenue to the west. The Napa Valley Wine Train (NVWT) tracks bisect the site (see Figure 1).

A FEMA Letter of Map Revision (LOMR) that reflects the flood reduction provided by the Napa River Dry Bypass and other flood protection project features is currently being processed by FEMA and the LOMR determination document is expected in February 2018. A portion of the property that is located on the east side of the NVWT tracks is within the effective FEMA 1-percent annual chance (100-year) floodplain and regulatory floodway. When the LOMR becomes effective, this portion of the property will be removed from the floodway and the official base flood elevation (BFE) for the site will become 18.6 feet (NAVD88).

Proposed Project

The proposed project includes two hotel buildings, as depicted in the attached site plan. The approximate dimensions of each of the buildings are 130 feet wide by 110 feet long.

Hydraulic Analysis

River Focus was asked to analyze the impact of the proposed project on computed flood elevations and flood flow under current LOMR conditions. This study was performed at the request of RSA⁺, in coordination with the City of Napa.

Model Setup

As part of the ongoing LOMR, a two-dimensional (2-D) hydrodynamic model was developed for the Napa River using HEC-RAS (River Analysis System), Version 5.0.3. As shown in Figure 2, the 2-D model mesh extends from approximately 1,800 feet upstream of the Lake Park Levee to approximately 1,500 feet downstream of Imola Avenue. The model extents were made sufficiently large to capture the various overbank split flows during the 1-percent annual chance exceedance flood event. All model elevations are in the NAVD88 vertical datum.

Although the LOMR process is still ongoing, the 2-D model was reviewed and approved by the FEMA reviewer (STARR II); therefore, it can be used for analyzing the potential impacts of the proposed project on computed flood elevations. In addition, the 2-D model allows for a very detailed analysis of the project site hydraulics and provides an excellent tool for simulating areas of effective and ineffective flow. In contrast, the Napa River one-dimensional

(1-D) hydraulic model can less adequately model the local flow dynamics associated with the proposed buildings, since flood flows near the proposed buildings would likely not be 1-D in nature.

Figure 1. First and Oxbow Project Location with Revised Floodway Limits

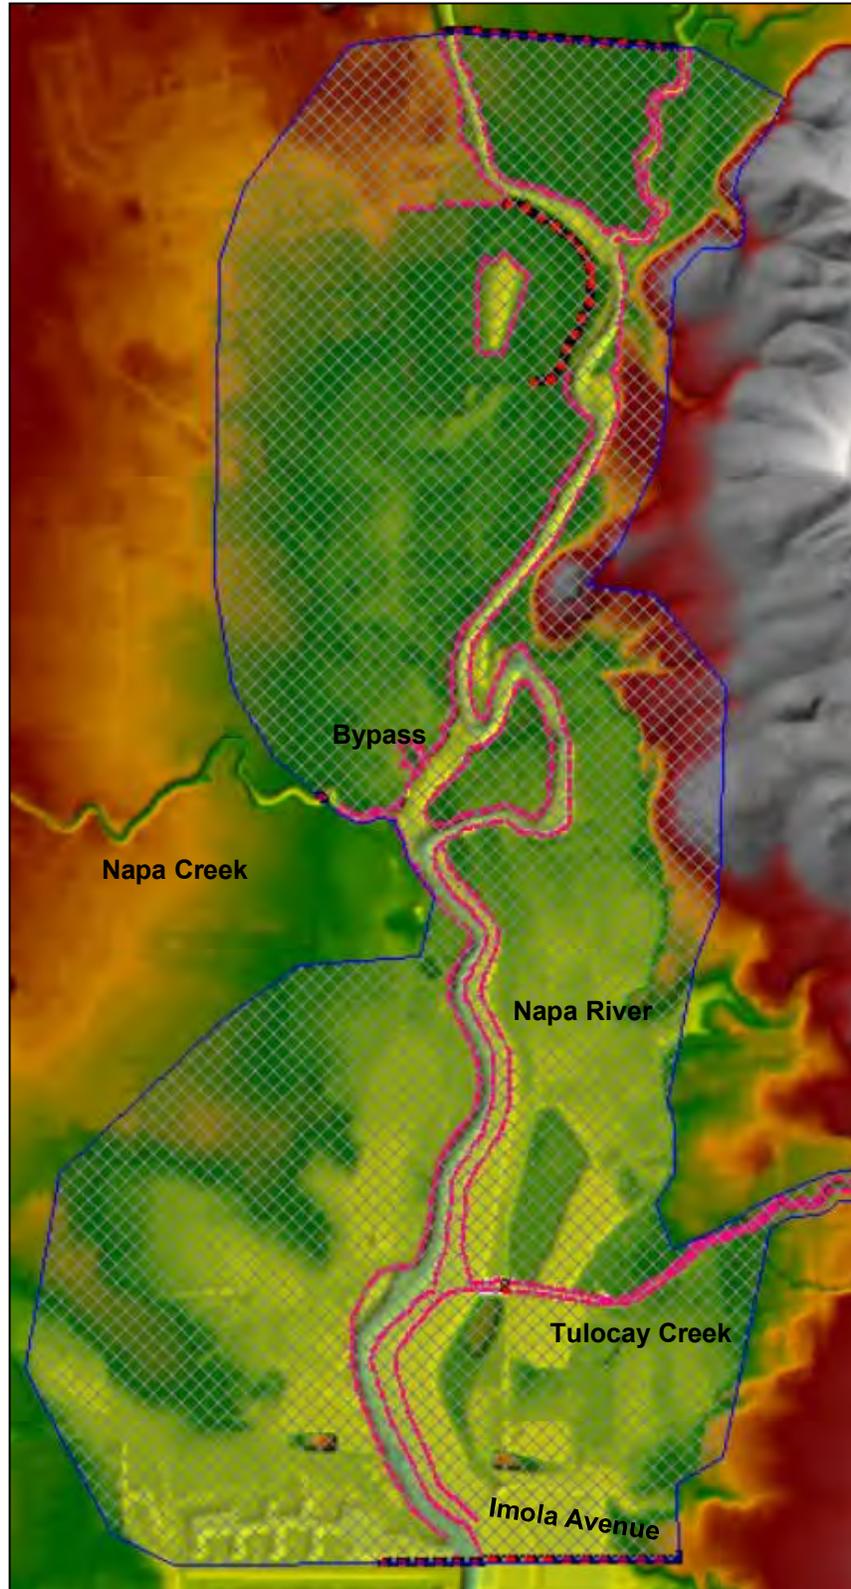

Figure 2. Overall 2-D Model Boundary and Mesh (Note: Breaklines are shown in pink.)

As expected, there were some differences between the 1-D and 2-D model results throughout the study reach. Manning's n values were adjusted in the 2-D hydraulic model so that the computed BFE at the project site was equal to the computed BFE from the 1-D hydraulic model used for the LOMR.

Model Scenarios

Two conditions were modeled: (1) existing conditions with structures near the project site and (2) proposed conditions with the First and Oxbow development.

Terrain Data

The terrain data used for the 2-D model is the same as what was used for the effective FEMA model and includes U.S. Army Corps of Engineers survey data for the channel and a combination of City of Napa LiDAR data, LiDAR data from the National Center for Airborne Laser Mapping (NCALM), and survey data for the former Copia property in the overbank areas.

The existing buildings near the project site were added directly to the terrain. The same approach was taken for the proposed buildings.

2-D Flow Area

The overall 2-D model mesh was generated using a computational point spacing interval of 50 feet. The computational mesh was enhanced with the addition of breaklines to ensure proper flow along channel banks, high-ground areas, and other topographic features.

Hydraulic Model Results

For proposed conditions, there was a minimal impact on offsite flood elevations when compared to existing conditions.

Flow trace results, shown in Figure 3 and Figure 4, demonstrate that the proposed building on the west side of the NVWT has no impact on the floodplain, while the proposed building to the east has a minimal impact on flow conveyance and storage reduction as compared to existing conditions. As a result, there is an onsite increase of 0.04 feet in BFE in the immediate vicinity of the proposed structure, and an increase of only 0.01 feet in offsite flood elevations upstream of the site. There is no increase in offsite flood elevations downstream of the proposed structures. Figure 5 illustrates the slight increase in base flood elevations due to the proposed First and Oxbow development.

The potential impact of the proposed buildings on Napa River flows was also investigated by introducing 2-D flowlines upstream and downstream of the proposed buildings perpendicular to the flow in the Napa River and overbank areas. The locations of the 2-D flowlines are shown in Figure 6. Hydrograph comparisons for existing vs. proposed conditions are provided in Figure 7 and Figure 8 for the upstream and downstream flowlines, respectively. Flow values are also provided in Table 1 for the downstream flowline (results are similar for the upstream flowline). The proposed First and Oxbow development does not have a negative impact on Napa River flows.

Project: 17-236

INTRODUCTION

The First and Oxbow Project proposes to construct two mixed-use buildings with retail and boutique lodges in the Oxbow Commercial District of the City of Napa, California. The boutique hotel would include a pool, a spa, meeting rooms, and dining rooms. The two four-story buildings would be constructed on either side of the Napa ‘wine train’ railroad tracks. Each building would provide 37 hotel rooms, for a total of 74 rooms between the two buildings. Ground level facilities would include commercial and restaurant use, outdoor and indoor recreational facilities for the hotel, and the hotel lobby. The project includes one level of below grade parking.

This report evaluates the project’s potential to result in significant noise and vibration impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; 2) the General Plan Consistency Section discusses noise and land use compatibility utilizing policies in the City’s General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts, provides a discussion of each project impact, and presents mitigation measures, where necessary, to provide a compatible project in relation to adjacent noise sources and land uses.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (frequency) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA)*. This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA

are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise descriptor* is called L_{eq} . The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level (CNEL)* is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The *Day/Night Average Sound Level (DNL or L_{dn})* is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Sleep and Speech Interference

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA CNEL. Typically, the highest steady traffic noise level during the daytime is about equal to the CNEL and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12 to 17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling. Sleep and speech interference is therefore possible when exterior noise levels are about 57 to 62 dBA CNEL with open windows and 65 to 70 dBA CNEL if the windows are closed. Levels of 55 to 60 dBA are common along collector streets and secondary arterials, while 65 to 70 dBA is a typical value for a primary/major arterial. Levels of 75 to 80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, and those facing major roadways and freeways typically need special glass windows.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The CNEL as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 50 dBA CNEL. At a CNEL of about 60 dBA, approximately 12 percent of the population is highly annoyed. When the CNEL increases to 70 dBA, the percentage of the population highly annoyed increases to about 25 to 30 percent of the population. There is, therefore, an increase of about 2 percent per dBA between a CNEL of 60 to 70 dBA. Between a CNEL of 70 to 80 dBA, each decibel increase increases by about 3 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the CNEL is 60 dBA, approximately 30 to 35 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 3 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 4 percent increase in the percentage of the population highly annoyed.

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from “Historic and some old buildings” to “Modern industrial/commercial buildings”. Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

Railroad and light-rail operations are potential sources of substantial ground vibration depending on distance, the type and the speed of trains, and the type of railroad track. People’s response to ground vibration has been correlated best with the velocity of the ground. The velocity of the ground is expressed on the decibel scale. The reference velocity is 1×10^{-6} in./sec. RMS, which equals 0 VdB, and 1 in./sec. equals 120 VdB. Although not a universally accepted notation, the abbreviation “VdB” is used in this document for vibration decibels to reduce the potential for confusion with sound decibels.

Typical background vibration levels in residential areas are usually 50 VdB or lower, well below the threshold of perception for most humans. Perceptible vibration levels inside residences are attributed to the operation of heating and air conditioning systems, door slams and foot traffic. Construction activities, train operations, and street traffic are some of the most common external sources of vibration that can be perceptible inside residences. Table 4 illustrates some common sources of vibration and the association to human perception or the potential for structural damage.

TABLE 1 Definition of Acoustical Terms Used in this Report

| Term | Definition |
|---|--|
| Decibel, dB | A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals. |
| Sound Pressure Level | Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e. g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter. |
| Frequency, Hz | The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz. |
| A-Weighted Sound Level, dBA | The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. |
| Equivalent Noise Level, L_{eq} | The average A-weighted noise level during the measurement period. |
| L_{max} , L_{min} | The maximum and minimum A-weighted noise level during the measurement period. |
| L_{01} , L_{10} , L_{50} , L_{90} | The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period. |
| Day/Night Noise Level, L_{dn} or DNL | The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 p.m. and 7:00 a.m. |
| Community Noise Equivalent Level, CNEL | The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 p.m. to 10:00 p.m. and after addition of 10 decibels to sound levels measured in the night between 10:00 p.m. and 7:00 a.m. |
| Ambient Noise Level | The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location. |
| Intrusive | That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level. |

TABLE 2 Typical Noise Levels in the Environment

| Common Outdoor Activities | Noise Level (dBA) | Common Indoor Activities |
|-----------------------------------|-------------------|--|
| | 110 dBA | Rock band |
| Jet fly-over at 1,000 feet | | |
| | 100 dBA | |
| Gas lawn mower at 3 feet | | |
| | 90 dBA | |
| Diesel truck at 50 feet at 50 mph | | Food blender at 3 feet |
| | 80 dBA | Garbage disposal at 3 feet |
| Noisy urban area, daytime | | |
| Gas lawn mower, 100 feet | 70 dBA | Vacuum cleaner at 10 feet |
| Commercial area | | Normal speech at 3 feet |
| Heavy traffic at 300 feet | 60 dBA | |
| | | Large business office |
| Quiet urban daytime | 50 dBA | Dishwasher in next room |
| Quiet urban nighttime | 40 dBA | Theater, large conference room |
| Quiet suburban nighttime | | |
| | 30 dBA | Library |
| Quiet rural nighttime | | Bedroom at night, concert hall (background) |
| | 20 dBA | |
| | 10 dBA | Broadcast/recording studio |
| | 0 dBA | |

TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

| Velocity Level, PPV (in/sec) | Human Reaction | Effect on Buildings |
|------------------------------|--|---|
| 0.01 | Barely perceptible | No effect |
| 0.04 | Distinctly perceptible | Vibration unlikely to cause damage of any type to any structure |
| 0.08 | Distinctly perceptible to strongly perceptible | Recommended upper level of the vibration to which ruins and ancient monuments should be subjected |
| 0.1 | Strongly perceptible | Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings |
| 0.25 | Strongly perceptible to severe | Threshold at which there is a risk of damage to historic and some old buildings. |
| 0.3 | Strongly perceptible to severe | Threshold at which there is a risk of damage to older residential structures |
| 0.5 | Severe - Vibrations considered unpleasant | Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures |

Regulatory Background

The State of California, the City of Napa, and the Federal Transit Authority (FTA) have established regulatory criteria that are applicable in this assessment. The State CEQA Guidelines, Appendix G, are used to assess the potential significance of impacts pursuant to local General Plan policies, Municipal Code standards, or the applicable standards of other agencies. A summary of the applicable regulatory criteria is provided below.

2018 State CEQA Guidelines. The CEQA contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

- (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- (b) Generation of excessive groundborne vibration or groundborne noise levels;
- (c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

Checklist items (a), (b), and (c) are applicable to the proposed project.

2016 California Building Code, Title 24, Part 2. The current version of the California Building Code (CBC) requires interior noise levels attributable to exterior environmental noise sources to be limited to a level not exceeding 45 dBA DNL/CNEL in any habitable room.

2016 California Green Building Standards Code (Cal Green Code). The State of California established exterior sound transmission control standards for new non-residential buildings as set forth in the 2016 California Green Building Standards Code (Section 5.507.4.1 and 5.507.4.2). Section 5.507 states that either the prescriptive (Section 5.507.4.1) or the performance method (Section 5.507.4.2) shall be used to determine environmental control at indoor areas. The prescriptive method is very conservative and not practical in most cases; however, the performance method can be quantitatively verified using exterior-to-interior calculations. For the purposes of this report, the performance method is utilized to determine consistency with the Cal Green Code. Both of the sections that pertain to this project are as follows:

5.507.4.1 Exterior noise transmission, prescriptive method. Wall and roof-ceiling assemblies making up the building envelope that are exposed to the noise source shall meet a composite STC rating of at least 50 or a composite OITC rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 when the building falls within the 65 dBA L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway noise source, as determined by the local general plan noise element.

5.507.4.2 Performance method. For buildings located within the 65 dBA L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway noise source, wall and roof-ceiling assemblies making up the building envelope and exposed to the noise source shall be constructed to provide an interior noise environment attributable to exterior sources that does not exceed an hourly equivalent noise level ($L_{eq(1-hr)}$) of 50 dBA in occupied areas during any hour of operation.

The performance method, which establishes the acceptable interior noise level, is the method typically used when applying these standards.

City of Napa General Plan. The Health and Safety Chapter in the *Envision Napa 2020, Policy Document* sets forth policies with the goal of minimizing the impact of noise on people through noise reduction and suppression techniques, and through appropriate land use policies in the City of Napa. The following policies are applicable to the proposed project:

- HS-9.1** The City shall require new development to meet the exterior noise level standards set out in Table 8-1.
- HS-9.9** When feasible and appropriate, the City shall limit construction activities to that portion of the day when the number of persons occupying a potential noise impact area is lowest.
- HS-9.10** The City shall encourage new development to maintain the ambient sound environment as much as possible. The City shall require new transportation-related noise sources that cause the ambient sound levels to exceed the compatibility standards in Table 8-1 to incorporate conditions or design modifications to reduce the potential increase in noise environment.
- HS-9.11** The City shall regulate construction in a manner that allows efficient construction mobilization and activities, while also protecting noise sensitive land uses.
- HS-9.14** The City shall encourage new development to identify alternatives to the use of sound walls to attenuate noise impacts. Appropriate techniques include site planning such as incorporating setbacks, revisions to the architectural layout such as changing building orientation to provide noise attenuation for portions of outdoor yards, and construction modifications. In the event that sound walls are the only practicable alternative, such walls should be designed to be as visually pleasing as possible, incorporating landscaping, variations in color and patterns, and/ or changes in texture or building materials.

Table 8-1

LAND USE COMPATIBILITY FOR COMMUNITY NOISE ENVIRONMENTS

| LAND USE CATEGORY | COMMUNITY NOISE EXPOSURE Ldn or CNEL, dB | | | | | | INTERPRETATION |
|---|---|----|----|----|----|----|--|
| | 55 | 60 | 65 | 70 | 75 | 80 | |
| RESIDENTIAL - LOW DENSITY SINGLE FAMILY, DUPLEX, MOBILE HOMES | | | | | | |  NORMALLY ACCEPTABLE Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.  CONDITIONALLY ACCEPTABLE New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning features included in the design.  NORMALLY UNACCEPTABLE New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.  CLEARLY UNACCEPTABLE New construction or development should generally not be undertaken. |
| RESIDENTIAL - MULTL FAMILY | | | | | | | |
| TRANSIENT LODGING MOTELS AND HOTELS | | | | | | | |
| SCHOOLS, LIBRARIES, CHURCHES, HOSPITALS AND NURSING HOMES | | | | | | | |
| AUDITORIUMS, CONCERT HALLS, AMPHITHEATRES | | | | | | | |
| SPORTS ARENA, OUTDOOR SPECTATOR SPORTS | | | | | | | |
| PLAYGROUNDS AND NEIGHBORHOOD PARKS | | | | | | | |
| GOLF COURSES, RIDING STABLES, WATER RECREATION AND CEMETERIES | | | | | | | |
| OFFICE BUILDINGS, BUSINESS COMMERCIAL AND PROFESSIONAL | | | | | | | |
| INDUSTRIAL, MANUFACTURING UTILITIES AND AGRICULTURE | | | | | | | |

City of Napa Municipal Code. Section 17.52.310 of the Napa Municipal Code establishes the City's noise standards:

D. Development Projects. Development projects shall address noise standards and policies in the General Plan as follows:

3. Nonresidential projects adjacent to residential districts shall locate or design potential noise generation areas, such as, but not limited to, truck parking and loading docks, garbage collection areas, to minimize impacts on adjacent sensitive uses to the extent feasible.

Section 8.08.025 of the Napa Municipal Code regulates noise from construction activity. The applicable portion of this section states that any person engaged in construction activity shall limit said construction activity as follows:

A. Construction activities throughout the entire duration of the project shall be limited to the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday. There will be no startup of machines nor equipment prior to 8:00 a.m., Monday through Friday; no delivery of materials nor equipment prior to 7:30 a.m. nor past 5:00 p.m., Monday through Friday; no cleaning of machines nor equipment past 6:00 p.m., Monday through Friday; no servicing of equipment past 6:45 p.m., Monday through Friday; and construction on weekends or legal holidays shall be limited to the hours of 8:00 a.m. to 4:00 p.m., unless a permit shall first have been secured from the City Manager, or designee, pursuant to Section 8.08.050 of the code.

B. All muffler systems on construction equipment shall be properly maintained.

C. All construction equipment shall not be placed adjacent to developed areas unless said equipment is provided with acoustical shielding.

D. All construction and grading equipment shall be shut down when not actively in use.

Federal Transit Administration. The Federal Transit Authority (FTA) has developed vibration impact assessment criteria for evaluating vibration impacts associated with transit projects.¹ The proposed vibration impact criteria is based on maximum overall levels for a single event. The impact criteria for vibration are shown in Table 5. Note that there are criteria for frequent events (more than 70 events of the same source per day), occasional events (30 to 70 vibration events of the same source per day), and infrequent events (less than 30 vibration events of the same source per day).

¹U.S. Department of Transportation, Federal Transit Administration, Transit Noise and Vibration Impact Assessment, October 2018, FTA-VA-90-1003-06.

TABLE 5 Indoor Groundborne Vibration (GBV) and Groundborne Noise (GBN) Impact Criteria for General Vibration Assessment

| Land Use Category | GBV Impact Levels (VdB re 1 μinch/sec, RMS) | | | GBN Impact Levels (dBA re 20 micro Pascals) | | |
|---|--|--------------------------------|--------------------------------|--|--------------------------------|--------------------------------|
| | Frequent Events ¹ | Occasional Events ² | Infrequent Events ³ | Frequent Events ¹ | Occasional Events ² | Infrequent Events ³ |
| Category 1 Buildings where vibration would interfere with interior operations. | 65 VdB ⁴ | 65 VdB ⁴ | 65 VdB ⁴ | N/A ⁵ | N/A ⁵ | N/A ⁵ |
| Category 2 Residences and buildings where people normally sleep. | 72 VdB | 75 VdB | 80 VdB | 35 dBA | 38 dBA | 43 dBA |
| Category 3 Institutional land uses with primarily daytime use. | 75 VdB | 78 VdB | 83 VdB | 40 dBA | 43 dBA | 48 dBA |
| <ol style="list-style-type: none"> 1. “Frequent Events” is defined as more than 70 vibration events of the same source per day. Most rapid transit projects fall into this category. 2. “Occasional Events” is defined as between 30 and 70 vibration events of the same source per day. Most commuter trunk lines have this many operations. 3. “Infrequent Events” is defined as fewer than 30 vibration events of the same kind per day. This category includes most commuter rail branch lines. 4. This criterion limit is based on levels that are acceptable for most moderately sensitive equipment such as optical microscopes. For equipment that is more sensitive, a Detailed Vibration Analysis must be performed. 5. Vibration sensitive equipment is generally not sensitive to groundborne noise; however, the manufacturer’s specifications should be reviewed for acoustic and vibration sensitivity. | | | | | | |

Existing Noise and Vibration Environment

Noise Monitoring Survey

The project site is located south of First Street and east of Soscol Avenue. The Napa “wine train” railroad tracks bisect the site. The east site (731 Water Street) is currently developed with residential structures and the west site (711 First Street) is vacant. The project site is surrounded by retail/commercial uses to the north, a restaurant and residence to the east, and a commercial use building to the south. The Napa Wine Train, which previously utilized the adjacent railroad track, now travels primarily between the new Napa Train Station (north of the site) and Saint Helena. Approximately 4 to 6 passenger trains per day travel the new route, with only occasional daytime trains traveling south of the Napa Train Station to the portion of the track near the site. The tracks are not used by other commuter or freight trains.

A noise monitoring survey was performed in the vicinity of the project site beginning Wednesday, February 27, 2019 and concluding on Friday, March 1, 2019. The monitoring survey included two long-term noise measurements and two short-term measurements, as shown in Figure 1. Table 6

summarizes the results of the short-term measurements. The results of the long-term noise measurements at LT-1 and, LT-2 are shown in Figures 3 and 4, respectively.

Long-term noise measurement LT-1 was made approximately 150 feet from the centerline of First Street, at the intersection of Water Street and McKinstry Street and to the east of the project site. The primary noise source at this location was vehicular traffic on First Street. Hourly average noise levels ranged from 54 to 62 dBA L_{eq} at this location during daytime hours and from 42 to 54 dBA L_{eq} at night. The day-night average noise level on Thursday, February 28, 2019 was 59 dBA CNEL.

LT-2 was measured on the 711 First Street site, 140 feet from First Street and 175 feet from Soscol Avenue. The primary noise sources at this location were distant vehicular traffic from First Street and Soscol Avenue, with elevated noise levels occurring during occasional train operations. Hourly average noise levels at this location ranged from 59 to 72 dBA L_{eq} during the day and from 49 to 60 dBA L_{eq} at night. Maximum instantaneous noise levels during train movements ranged from 94 to 98 dBA L_{max} at this location. The day-night average noise level on Thursday, February 28, 2019 was 65 dBA CNEL.

TABLE 6 Summary of Short-Term Noise Measurement Data, February 28, 2019

| ID | Location (Start Time) | Measured Noise Levels, dBA | | | | Primary noise source |
|------|--|----------------------------|-----------------|-----------------|-----------------|---|
| | | L ₁₀ | L ₅₀ | L ₉₀ | L _{eq} | |
| ST-1 | West property line of 711 First Street site, 65 feet from Soscol Avenue (12:00 pm to 12:10 pm) | 72 | 67 | 63 | 69 | Traffic on Soscol Avenue |
| ST-2 | 40 feet from First street and train tracks (12:20 pm to 12:30 pm) | 62 | 58 | 54 | 59 | Traffic of First Street and Soscol Avenue |

FIGURE 1 Noise Measurement Locations

Vibration monitoring Survey

Vibration measurements of a train passby event were conducted on March 1, 2019, at setbacks of 25 feet (V-1) and 50 feet (V-2) from the center of the track. The vibration measurements V-1 and V-2, shown in Figure 2, were located approximately 0.3 miles north of the project site, 750 feet north of Napa Train Station, and west of the train track. The two setbacks were used to develop a drop-off rate for groundborne vibration with distance. The instrumentation used to conduct measurements included a Larson Davis 831 Sound Level Meter and low noise accelerometers firmly affixed to the ground. This system is capable of accurately measuring very low vibration levels. Vibration levels were measured in the vertical axis because ground vibration is typically most dominant in this axis. Vibration levels were measured at ground level and were representative of the levels that would enter a buildings foundation. Vibration levels of 75 VdB were measured at V-1 and 66 VdB at V-2, as shown in Figures 5 and 6, respectively.

FIGURE 2 Vibration Measurement Locations

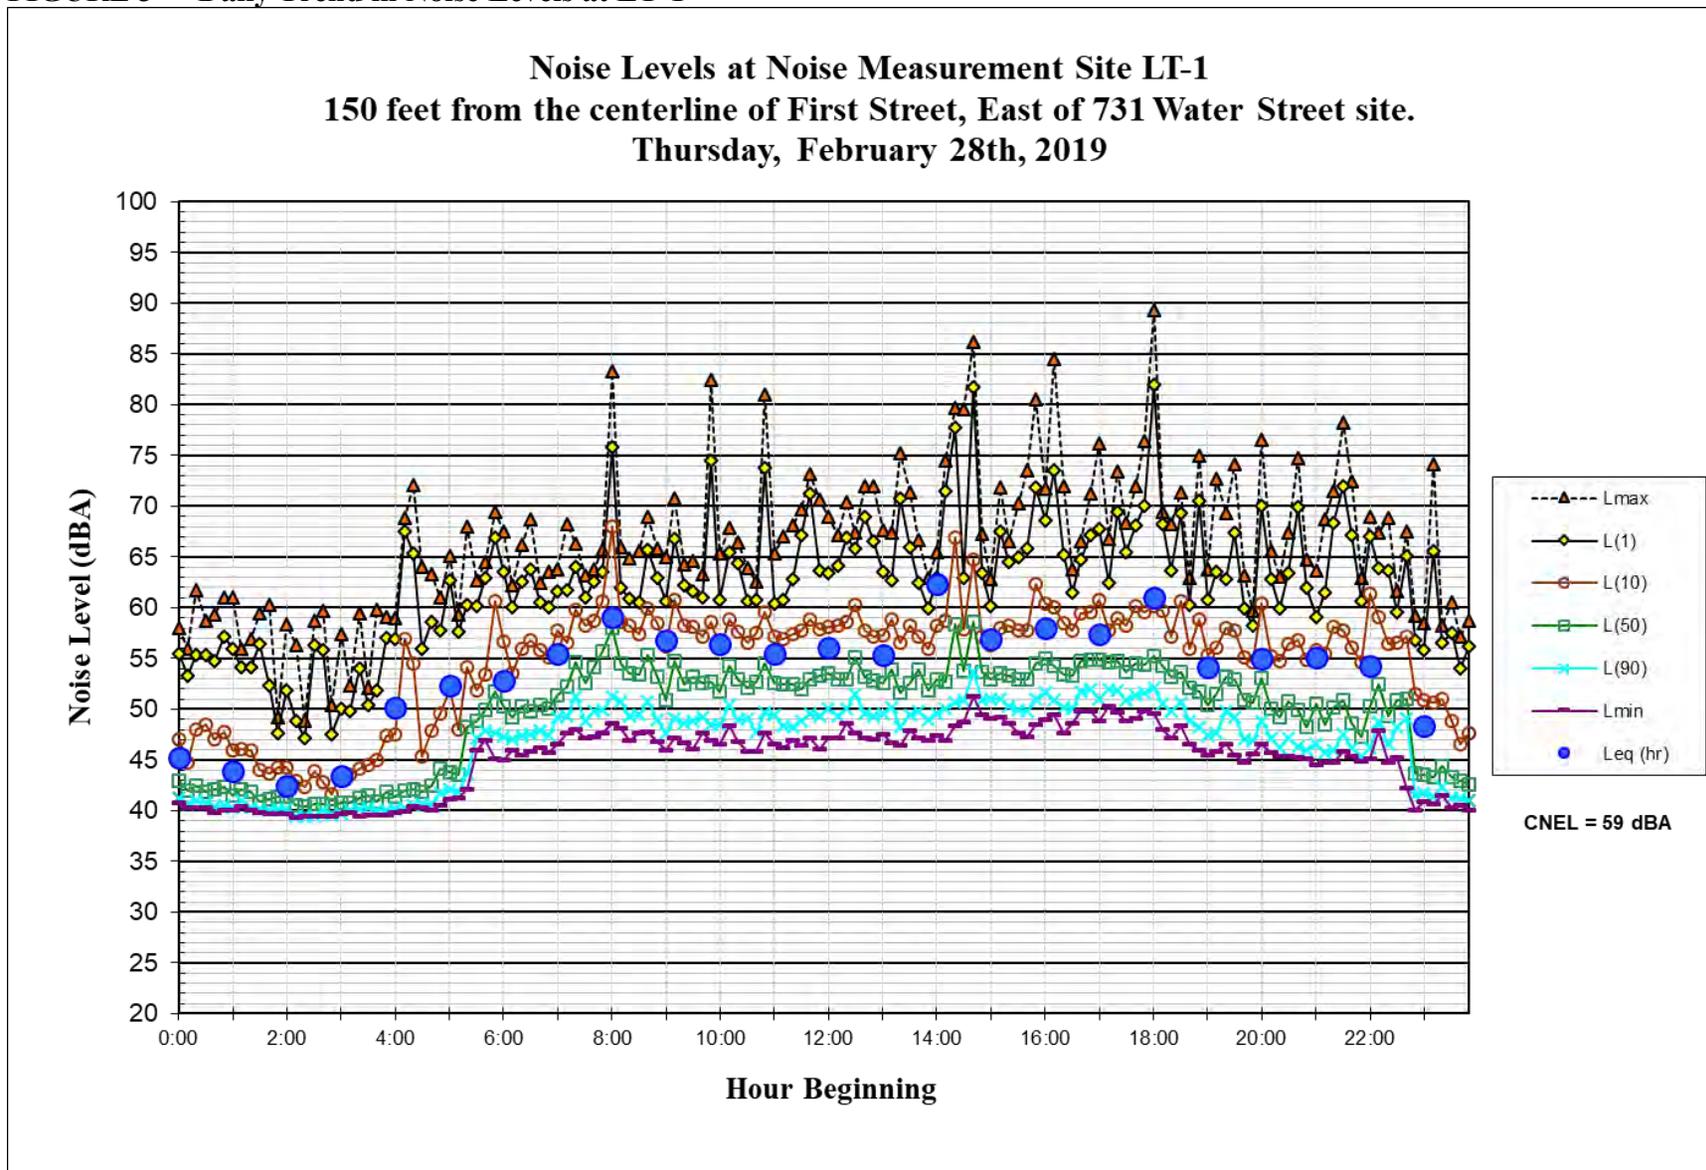

FIGURE 4 Daily Trend in Noise Levels at LT-2

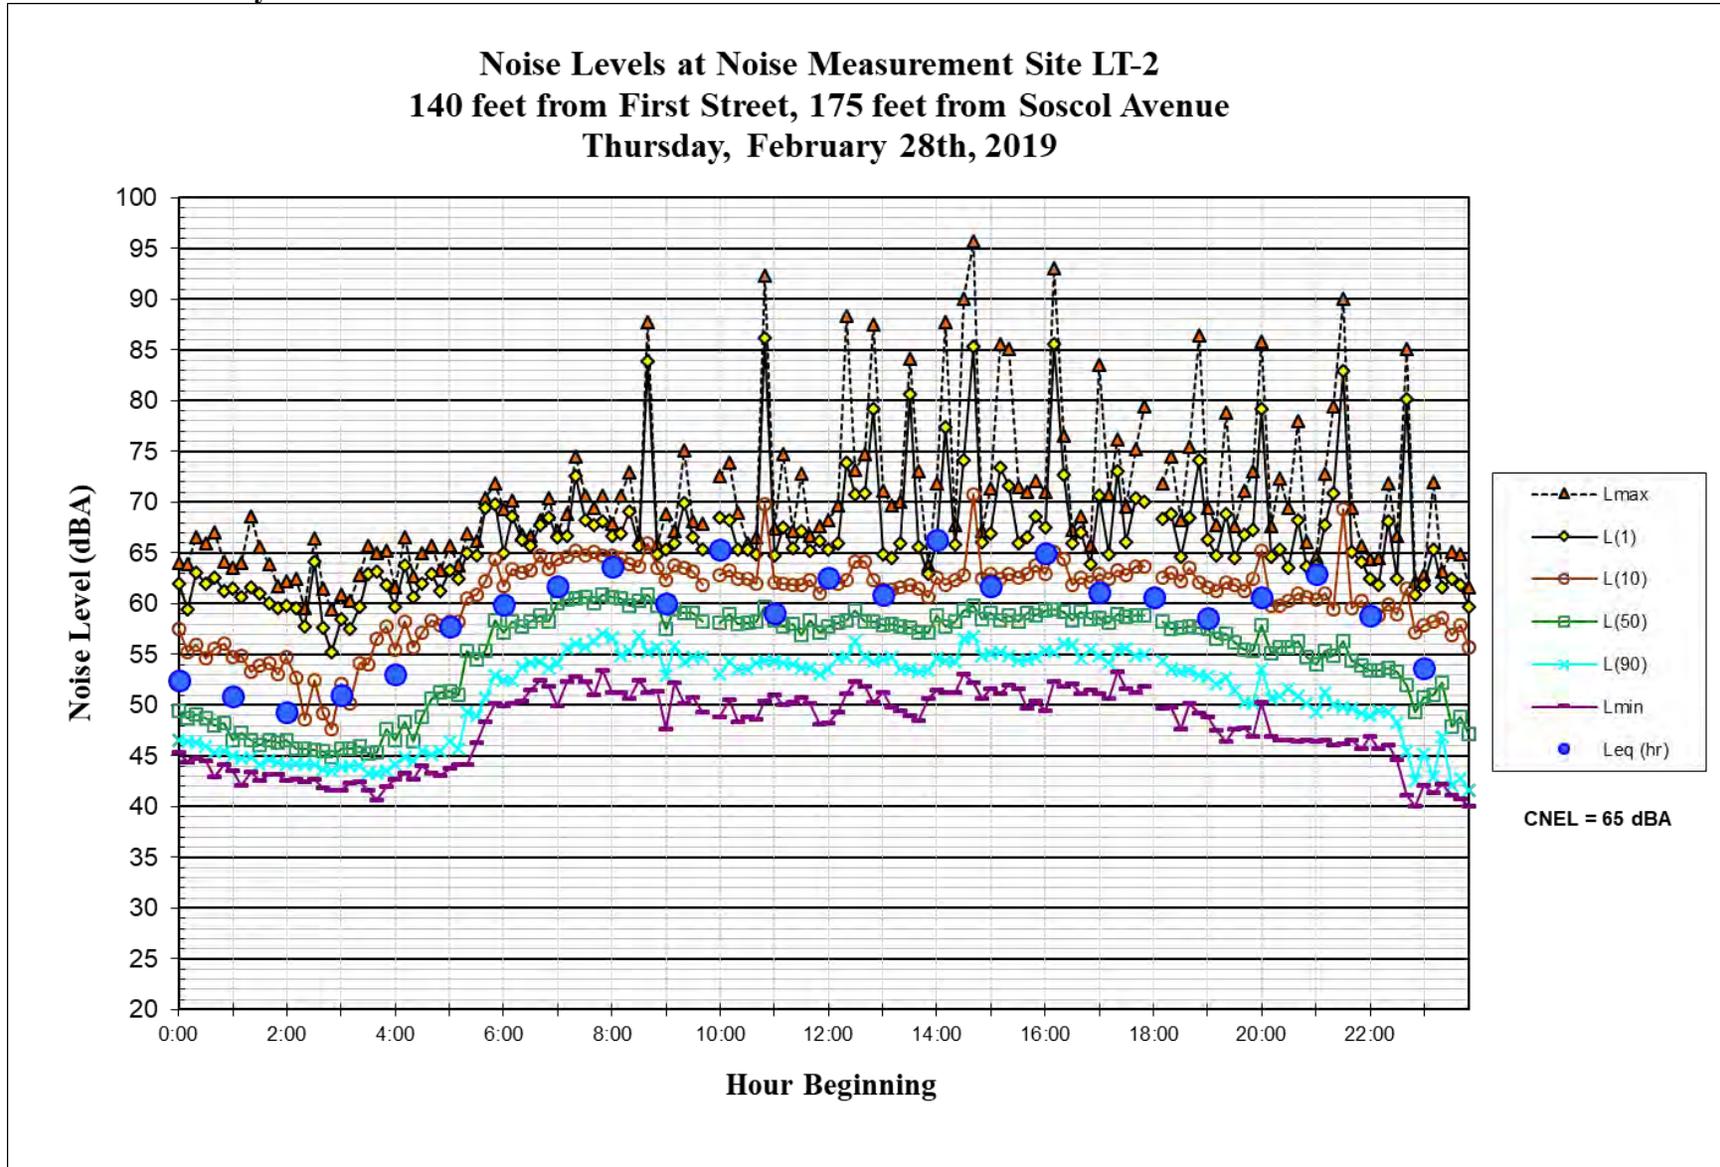

FIGURE 5 Vibration levels measured at V-1

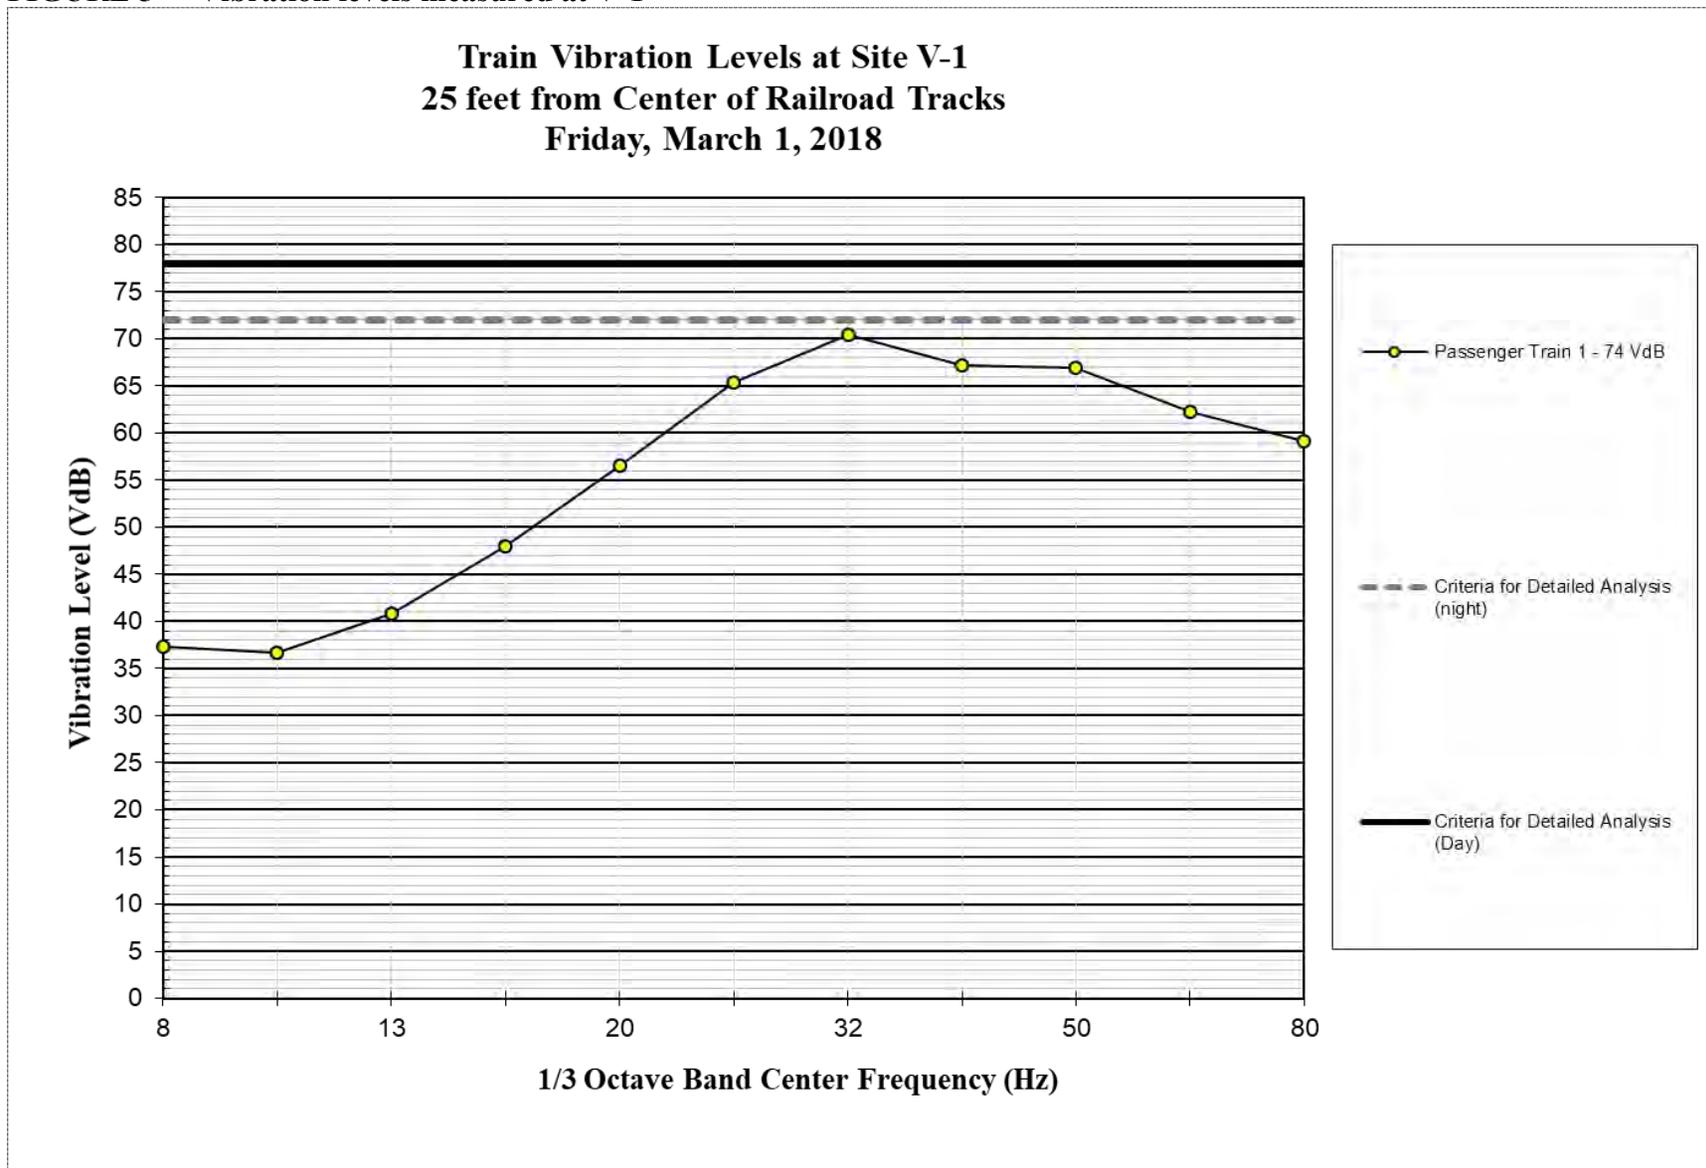

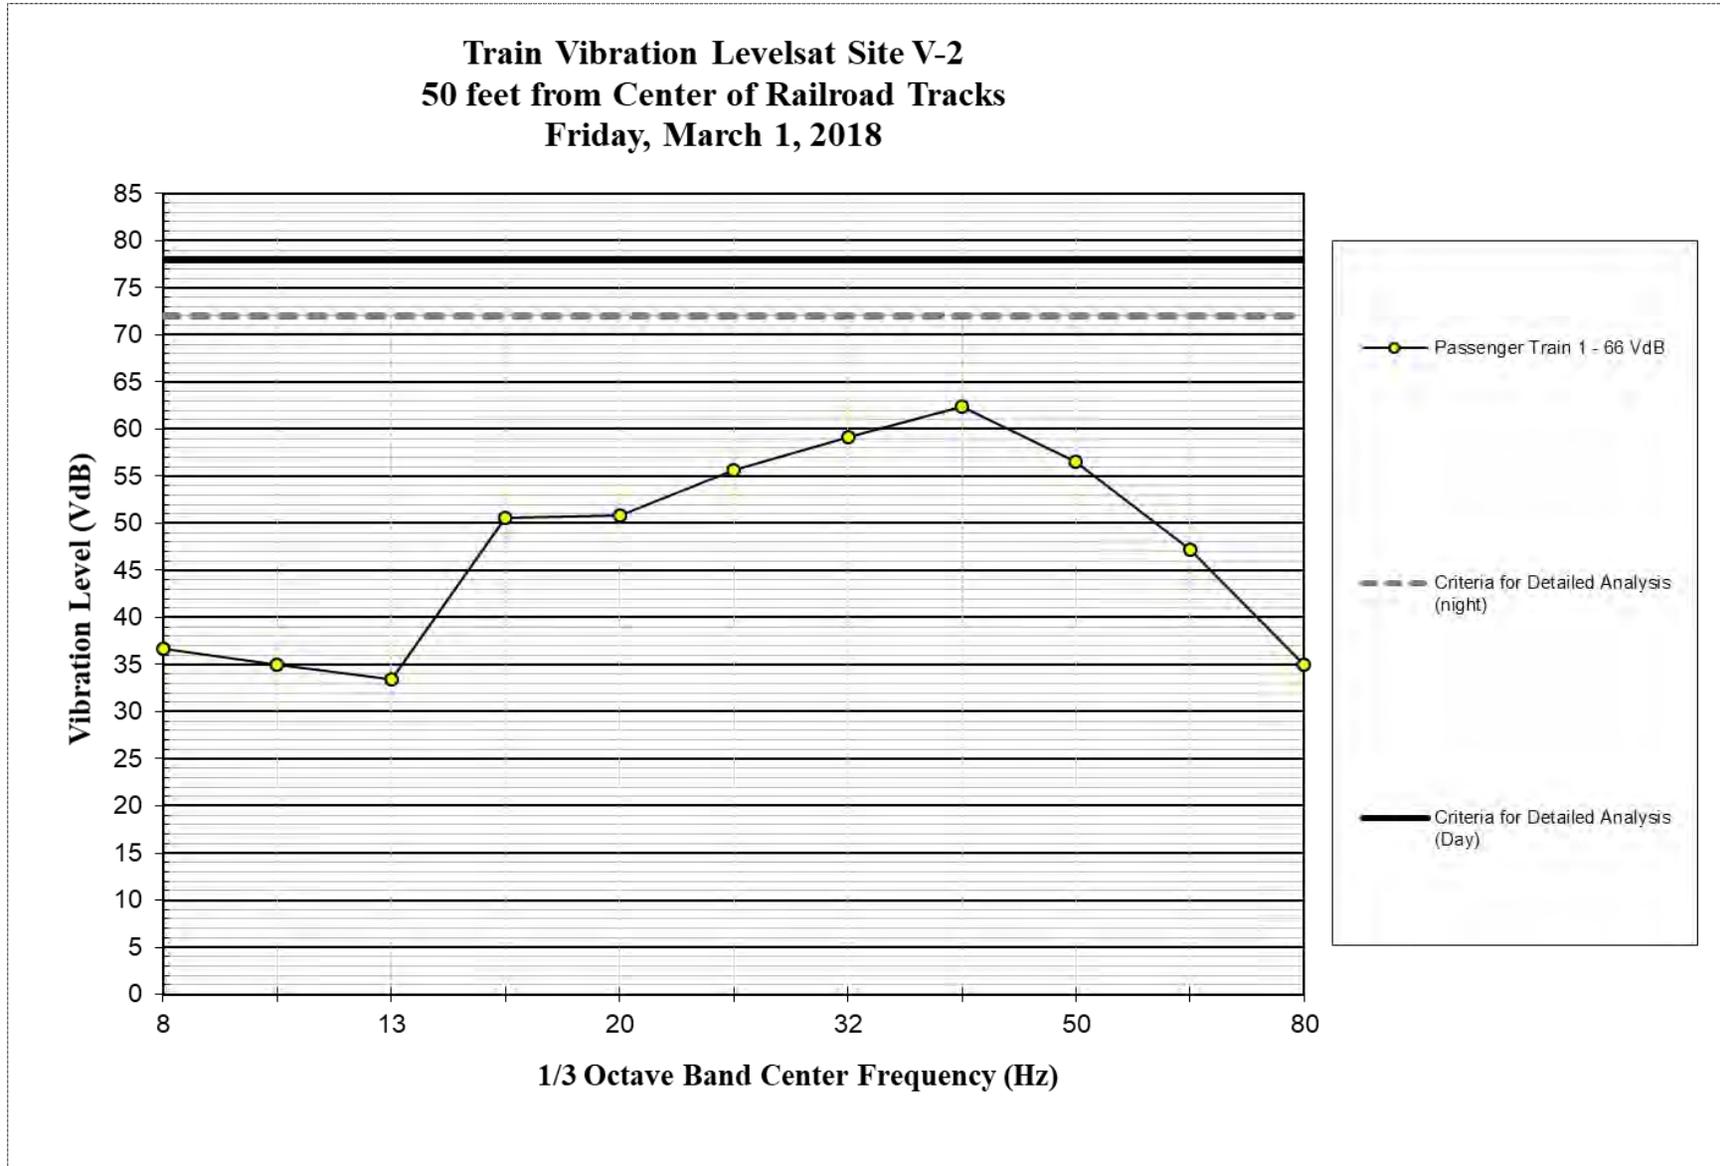

FIGURE 6 Vibration levels measured at V-2

NOISE CONSISTENCY ANALYSIS – COMPATIBILITY OF PROJECT WITH NOISE AND VIBRATION

The impacts of site constraints such as exposure of the proposed project to excessive levels of noise and vibration are not considered under CEQA. This section addresses Noise and Land Use Compatibility for consistency with the policies set forth in the City's General Plan.

Noise and Land Use Compatibility

The Health and Safety Chapter in the Envision Napa 2020 General Plan sets forth policies with the goal of minimizing the impact of noise on people through noise reduction and suppression techniques, and through appropriate land use policies in the City of Napa. The applicable General Plan policies were presented in detail in the Regulatory Background section and are summarized below for the proposed project:

- The City's acceptable exterior noise level objective is 65 dBA CNEL or less for transient lodging, hotels, and motels and 70 dBA CNEL for commercial uses (Table 8-1).
- The City's standard for interior noise levels in residences is 45 dBA CNEL.
- The California Green Building Code limits interior noise levels within new non-residential land uses to an hourly equivalent noise level ($L_{eq}(1-hr)$) of 50 dBA in occupied areas during any hour of operation.

Future Exterior Noise Environment

The primary noise sources at the site would continue to be vehicular traffic on First Street and Soscol Avenue, with elevated noise levels occurring during train operations. Based on traffic volumes provided², future traffic noise levels would increase by 1 to 2 dB above existing conditions along First Street and are not anticipated to increase under future conditions along Soscol Avenue. No information is available about future train operations; therefore, it is assumed that train operations would continue to be occasional and during daytime hours only.

Proposed noise sensitive exterior use areas would include a pool located on the ground level (Level 0) in the southern portion of west-building and a central courtyard on Level 1 in both buildings. Based on the results on the noise monitoring survey and the discussion above, the pool area would be exposed to up to 60 dBA CNEL, the courtyard of west-building would be exposed to up to 60 dBA CNEL, and the courtyard of east building would be exposed to 48 dBA CNEL. Noise levels at the exterior use areas of proposed hotel buildings would not exceed the City's acceptable exterior noise level criteria of 65 dBA CNEL for transient lodging, hotels, and motels or the 70 dBA CNEL criteria for commercial uses.

² *Traffic Impact Study for First and Oxbow Hotel Project*, W-Trans, November 30, 2018.

Future Interior Noise Environment

Interior noise levels within hotel rooms are required to be maintained at or below 45 dBA CNEL by City and State Standards. The Cal Green Code limits noise level inside occupied non-residential interior spaces to 50 dBA $L_{eq}(1-hr)$ during any hour of operation. Due to the low and daytime only occurrence of train movements near the site, sleep and speech disturbance is not anticipated.

Exterior noise level exposures at building façades were calculated based on the noise measurement survey and future increases in traffic, as described above. Interior noise levels would vary depending upon the design of the buildings (relative window area to wall area) and the selected construction materials and methods. Standard residential construction provides approximately 15 dBA of exterior-to-interior noise reduction, assuming the windows are partially open for ventilation. Standard new construction with the windows closed provides approximately 25 dBA of noise reduction in interior spaces. Where exterior noise levels range from 60 to 70 dBA CNEL, the inclusion of adequate forced-air mechanical ventilation can reduce interior noise levels to acceptable levels by allowing occupants the option of closing the windows to control noise. Table 7 shows the calculated exterior and interior noise levels of building façades.

TABLE 7 Calculated Exterior and Interior Noise Levels at Hotel Room Façades

| Building | Façade | Calculated Noise Levels (dBA CNEL) | | | Recommended Sound Rated Construction ² for 45 dBA CNEL threshold |
|----------------------------------|--------|------------------------------------|----------------------------|------------------------------|---|
| | | Exterior | Interior with Windows Open | Interior with Windows Closed | |
| 711 First Street (West-Building) | West | 73 | 58 | 48 | STC 30 and Forced-air ¹ |
| | North | 71 | 56 | 46 | STC 28 and Forced-air ¹ |
| | South | 70 | 55 | 45 | STC 26 and Forced-air ¹ |
| | East | 60 | 45 | 35 | Forced-air ¹ |
| 731 Water Street (East-Building) | North | 64 | 49 | 39 | Forced-air ¹ |
| | East | 63 | 48 | 38 | Forced-air ¹ |
| | West | 58 | 43 | 33 | None required |
| | South | 58 | 43 | 33 | None required |

¹ Assumes forced-air mechanical ventilation is provided to allow occupants the option of keeping windows closed to control noise.

² Analysis assumes window area to be 40% of the façade area or less and wall with STC 39 rating or greater.

The north and east façades of the 731 Water Street site would be exposed to 64 dBA CNEL and 63 dBA CNEL, respectively. The southern façade would be exposed to up to 43 dBA CNEL and the western façade would be exposed to up to 58 dBA CNEL. The western, northern, and southern façades of the 711 First Street site would be exposed to up to 73 dBA CNEL, 71 dBA CNEL, and 70 dBA CNEL respectively. The eastern façade at 711 First Street would be exposed to up to 60 dBA CNEL.

As shown in Table 7, interior noise levels in hotel rooms of 711 First Street with standard construction and windows partially open for ventilation would range from 45 to 58 dBA CNEL, with the highest levels inside units facing Soscol Avenue. Interior noise levels in hotel rooms of 731 Water Street are calculated to range from 43 to 49 dBA CNEL with standard construction and windows partially open for ventilation.

The minimum STC ratings required to achieve the 45 dBA CNEL threshold are also summarized in Table 7. The analysis assumes that the façade area is made up of 40% windows or less and walls with a sound rating of STC 39. Where STC rated windows are recommended, windows are assumed to be in the closed position, requiring forced-air ventilation to allow occupants the option of keeping windows closed.

Based on preliminary calculations, noise levels inside south and west facing hotel units of 731 Water Street would achieve the 45 dBA CNEL interior threshold with standard construction and windows in the open or closed position. Standard construction with the inclusion of forced-air mechanical ventilation to allow occupants the option of keeping windows closed to control noise would be sufficient for east facing rooms of 711 First Street and north and east facing rooms of 731 Water Street. Interior noise levels inside rooms with west, north, and south facing façades of 711 First Street would achieve 45 dBA CNEL with forced air mechanical ventilation and windows and doors with STC ratings of 26 to 30.

Loudest hour noise levels would be anticipated to be 1 to 3 dBA $L_{eq(1-hr)}$ higher than CNEL levels during periods with train movements, resulting in loudest hour interior noise levels of 44 to 59 dBA $L_{eq(1-hr)}$ with windows open and 34 to 49 dBA $L_{eq(1-hr)}$ with windows closed. The commercial and retail spaces on Level 1 would comply with the Cal Green Code standard of 50 dBA $L_{eq(1-hr)}$, assuming standard construction and the inclusion of forced-air mechanical ventilation to allow occupants the option of keeping windows closed to control noise.

Recommended Conditions of Approval

For consistency with the General Plan, the following Conditions of Approval are recommended for consideration by the City:

- Provide a suitable form of forced-air mechanical ventilation, as determined by the local building official, for all buildings so that windows can be kept closed to control noise.
- Provide sound rated windows to north, south, and west facing hotel room façades of 711 First Street to maintain interior noise levels at acceptable levels. Preliminary calculations show that sound-rated windows with minimum STC Ratings of 26 to 30 or higher would be satisfactory to achieve acceptable interior noise levels, assuming a window to wall ratio of 40% or less. The specific determination of what noise insulation treatments are necessary shall be conducted on a room-by-room basis during final design of the project once final building plans are available.

Vibration and Land Use Compatibility

The FTA has developed vibration impact assessment criteria for evaluating vibration impacts associated with transit projects (see Table 5). Approximately 4 to 6 passenger trains travel between Napa Station (located north of project site) and St. Helena with only a few trains traveling south of the Napa Station. The occasional, day-time Napa Wine train passbys through the project site would result in vibration impact of up to 74 VdB on the west-building. Given the frequency of

train events, the Category 2 'infrequent event' impact level threshold of 80 VdB would be appropriate for the proposed project.

Based on the calculated drop-off rate between the vibration monitoring positions, train vibration levels would be 80 VdB or higher within a distance of 16 feet from the center of the train track. Project structures would be located 30 feet to the west and 60 feet to the east of the tracks, and would not be exposed to vibration levels exceeding the vibration threshold for "infrequent events".

NOISE IMPACTS AND MITIGATION MEASURES

This section describes the significance criteria used to evaluate project impacts under CEQA, provides a discussion of each project impact, and presents mitigation measures, where necessary, to provide a compatible project in relation to adjacent noise sources and land uses.

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

1. **Temporary or Permanent Noise Increases in Excess of Established Standards:** A significant impact would be identified if project construction or operations would result in a substantial temporary or permanent increase in ambient noise levels at sensitive receivers in excess of the local noise standards contained in the City of Napa General Plan or Municipal Code, as follows:
 - a. Operational Noise in Excess of Standards. Neither the City of Napa General Plan nor the City of Napa Municipal Code regulates noise from industrial operations on other industrial properties. However, stationary equipment located on any residential property can be limited to a maximum loudness of 60 dB.
 - b. Permanent Noise Increase. A significant permanent noise impact would occur if the project resulted in an increase of 3 dBA CNEL or greater at noise-sensitive land uses where existing or projected noise levels would equal or exceed the noise level considered satisfactory for the affected land use (60 dBA CNEL for single-family residential areas) and/or an increase of 5 dBA CNEL or greater at noise-sensitive land uses where noise levels would continue to be below those considered satisfactory for the affected land use. (General Plan Policy HS-9.1)
 - c. Temporary Noise Increase. A significant noise impact would be identified if construction-related noise would temporarily increase ambient noise levels at sensitive receptors. Hourly average noise levels exceeding 60 dBA L_{eq} at residential land uses and/or 70 dBA L_{eq} at commercial land uses, and the ambient by at least 5 dBA L_{eq} , for a period of more than one year would constitute a significant temporary noise increase.
2. **Generation of Excessive Groundborne Vibration:** A significant impact would be identified if the construction of the project would expose persons to excessive vibration levels. Groundborne vibration levels exceeding 0.3 in/sec PPV would have the potential to result in cosmetic damage to normal buildings (see Table 3).
3. **Exposure to excessive aircraft noise:** For a project located in the vicinity of a private airstrip or an airport land use plan, a significant impact would be identified if the project were to expose people residing or working in the project area to excessive noise levels.

Impact 1: Temporary or Permanent Noise Increases in Excess of Standards. Project traffic and operations would not result in substantial permanent noise level increase or noise levels in excess of applicable noise standards at existing noise-sensitive uses in the project vicinity. However, existing noise-sensitive uses could be exposed to construction noise levels in excess of applicable noise standards. This is a **potentially significant** impact.

A significant noise impact would occur if construction, traffic, mechanical equipment, or parking activities generated by the project would substantially increase noise levels at sensitive receptors in the project vicinity.

a. Permanent Noise from On-site Operations

Noise generating on-site operational components of the project would include mechanical equipment and parking lot activities. The Napa General Plan establishes 60 dBA CNEL as the “normally acceptable” noise exposure level for single family residential land uses, which are located to the east of the site, and 65 dBA CNEL as the “normally acceptable” noise exposure level for multi-family residential land uses, which are located to the west and south of the site.

Parking Lot Noise

Parking would be provided in a garage located on below grade parking levels P1 and P2 of the proposed building. Surface parking spaces are not proposed. Access to the site and parking would be provided from First Street, to the north of the proposed buildings. Parking activities occurring in a closed garage would not be anticipated to be audible outside the building’s parking structure. Parking lot activities would not exceed the City’s noise limits and would not measurably contribute to the existing ambient noise environment. This is a **less-than-significant** impact.

Mechanical Equipment Noise

Per the site plan dated June 2018³, all mechanical equipment would be housed inside an equipment room located at the southwest corner on the parking level of both buildings. Indoor mechanical equipment is not anticipated to be audible at adjacent off-site uses. Rooftop equipment is not proposed. This is a **less-than-significant** impact.

b. Permanent Noise Increases from Project Traffic

A significant noise impact would occur if traffic or activities generated by the project would substantially increase noise levels at sensitive receptors in the project vicinity. A substantial increase would occur if: a) the noise level increase is 5 dBA CNEL or greater, with a future noise level of less than 60 dBA CNEL, or b) the noise level increase is 3 dBA CNEL or greater, with a future noise level of 60 dBA CNEL or greater.

Traffic data provided by the project’s traffic study² was reviewed to calculate potential traffic noise level increases attributable to the project expected along roadways serving the site. Roadways

³ Planning submittal, First and Oxbow Gateway Project, Napa, California; Backen Gillam Kroeger Architects, June 2018.

evaluated in the analysis included First Street, Soscol Avenue and McKinstry Street. Based on a comparison between traffic volumes under the existing plus project scenario and existing conditions, the traffic noise increase attributable to the project would be less than 1 dBA. This is a **less-than-significant** impact.

c. Temporary Noise Increases from Project Construction

The Napa Municipal Code limits construction hours to between the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, with no startup of machines nor equipment prior to 8:00 a.m., no delivery of materials nor equipment prior to 7:30 a.m. nor past 5:00 p.m., no cleaning of machines nor equipment past 6:00 p.m., and no servicing of equipment past 6:45 p.m. Construction on weekends or legal holidays is limited to the hours of 8:00 a.m. to 4:00 p.m.. In addition, all muffler systems on construction equipment are required to be properly maintained, all construction equipment is prohibited from being placed adjacent to developed areas unless said equipment is provided with acoustical shielding, and all construction and grading equipment is required to be shut down when not actively in use.

Neither the City of Napa nor the State of California specify quantitative thresholds for the impact of temporary increases in noise due to construction. The threshold for speech interference indoors is 45 dBA (see Setting Section, Effects of Noise). Assuming a 15 dB exterior-to-interior reduction for standard residential construction with windows open and a 25 dB exterior-to-interior reduction for standard commercial construction, assuming windows closed, this would correlate to an exterior threshold of 60 dBA L_{eq} at residential land uses and 70 dBA L_{eq} at commercial land uses. Therefore, the project would be considered to generate a significant temporary construction noise impact if project construction activities exceeded 60 dBA L_{eq} at nearby residences or exceeded 70 dBA L_{eq} at nearby commercial land uses and exceeded the ambient noise environment by 5 dBA L_{eq} or more for a period longer than one year.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time.

Construction activities would be carried out in stages. During each stage of construction, there would be a different mix of equipment operating, and noise levels would vary by stage and vary within stages, based on the amount of equipment in operation and the location at which the equipment is operating. Typical construction noise levels at a distance of 50 feet are shown in Tables 8 and 9. Table 8 shows the average noise level ranges, by construction phase, and Table 9 shows the maximum noise level ranges for different construction equipment. Most demolition and construction noise falls with the range of 80 to 90 dBA at a distance of 50 feet from the source.

| All other equipment with engines larger than 5 HP | 85 | Continuous |

Notes:

¹ Measured at 50 feet from the construction equipment, with a "slow" (1 sec.) time constant.² Noise limits apply to total noise emitted from equipment and associated components operating at full power while engaged in its intended operation.³ Portable Air Compressor rated at 75 cfm or greater and that operates at greater than 50 psi.

Source: Mitigation of Nighttime Construction Noise, Vibrations and Other Nuisances, National Cooperative Highway Research Program, 1999.

Construction activities generate considerable amounts of noise, especially during demolition and earth-moving activities when heavy equipment is used. It is unsure if pile driving would be used as a method of construction for this project. As a worst-case scenario, it is assumed that pile driving would occur during construction of building foundation. The construction of the proposed project would involve demolition, site preparation, grading and excavation, trenching, building erection, and paving. The hauling of excavated materials and construction materials would generate truck trips on local roadways as well.

FHWA’s Roadway Construction Noise Model (RCNM) was used to calculate the maximum and average noise levels anticipated during each phase of construction based on a provided construction equipment list. This construction noise model includes representative sound levels for the most common types of construction equipment and the approximate usage factors of such equipment that were developed based on an extensive database of information gathered during the construction of the Central Artery/Tunnel Project in Boston, Massachusetts (CA/T Project or "Big Dig"). The usage factors represent the percentage of time that the equipment would be operating at full power. Vehicles and equipment anticipated during each phase of construction were input into RCNM to calculate noise levels at a reference distance of 50 feet. Levels calculated in RCNM represent an upper bound of possible construction noise. Construction noise levels would typically range 5 to 10 dBA below these upper bound levels. The typical hourly average noise levels were calculated considering the distance from the center of the construction site to the nearest receptors.

Table 10 presents the construction noise levels calculated for each major construction phase of the project using RCNM. The nearest noise-sensitive land uses are approximately 50 feet from the site boundary and 150 to 225 feet from the center of the project site. At 50 feet, hourly average noise levels would typically range from 75 to 88 dBA L_{eq} , with pile driving resulting in hourly average noise levels of 105 dBA L_{eq} . At a distance of 150 feet, hourly average noise levels would typically range from 65 to 78 dBA L_{eq} , with pile driving resulting in hourly average noise levels of 95 dBA L_{eq} . Noise levels would be 5 to 15 dBA lower in shielded areas.

TABLE 10 Noise Levels by Construction Phase

| Construction Phase | Maximum Noise Level (L_{max} , dBA) | | | Hourly Average Noise Level ($L_{eq[h]}$, dBA) | | |
|--------------------|---|--------|---------|--|--------|---------|
| | 50 ft. | 80 ft. | 150 ft. | 50 ft. | 80 ft. | 150 ft. |
| Demolition | 90 | 86 | 80 | 88 | 84 | 78 |
| Site Preparation | 94 | 80 | 74 | 84 | 80 | 74 |
| Pile driving | 105 | 101 | 95 | 105 | 101 | 95 |
| Grading Excavation | 85 | 81 | 75 | 89 | 83 | 77 |
| Trenching | 94 | 80 | 74 | 82 | 78 | 72 |
| Building Exterior | 94 | 80 | 74 | 85 | 81 | 75 |
| Building Interior | 78 | 74 | 68 | 75 | 71 | 65 |
| Paving | 90 | 86 | 80 | 84 | 80 | 74 |

Noise levels would exceed 60 dBA L_{eq} and ambient levels by more than 5 dBA at adjacent residences. In addition, pile driving activities may occur over a period of several weeks in which

hourly average noise levels would be substantially higher than the average noise levels during other phases of construction. Duration of construction is anticipated to be 18 months. This would be a **potentially significant** impact.

Mitigation Measure 1: The following mitigation measures shall be included in the project to reduce the impact to a less-than-significant level:

- Construction activities shall be limited to the hours between 7:00 am and 7:00 pm, Monday through Friday, unless permission is granted with a development permit or other planning approval. No construction activities are permitted on the weekends at sites within 500 feet of a residence.
- Construct solid plywood fences around ground level construction sites adjacent to noise-sensitive land uses.
- Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.
- Unnecessary idling of internal combustion engines should be strictly prohibited.
- Locate stationary noise-generating equipment such as air compressors or portable power generators as far as possible from sensitive receptors. Construct temporary noise barriers to screen stationary noise-generating equipment when located near adjoining sensitive land uses. Temporary noise barriers could reduce construction noise levels by 5 dBA.
- Utilize "quiet" air compressors and other stationary noise sources where technology exists.
- Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the project site.
- A temporary noise control blanket barrier could be erected, if necessary, along building façades facing residential areas during upper level construction. This mitigation would only be necessary if conflicts occurred which were irresolvable by proper scheduling. Noise control blanket barriers can be rented and quickly erected.
- Pre-drill foundation pile holes to minimize the number of impacts required to seat the pile.
- Consider the use of "acoustical blankets" for receptors located within 100 feet of the site during pile driving activities.
- Notify all adjacent business, residences, and other noise-sensitive land uses of the construction schedule, in writing, and provide a written schedule of "noisy" construction activities to the adjacent land uses and nearby residences.
- Designate a "disturbance coordinator" who would be responsible for responding to any complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaint (e.g., bad muffler, etc.) and will require that reasonable measures be

implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include in it the notice sent to neighbors regarding the construction schedule.

Impact 2: Groundborne Vibration from Construction. Construction-related vibration levels resulting from construction activities are anticipated to exceed 0.3 in/sec PPV at the nearest structures during pile driving activity. **This is a potentially significant impact.**

City of Napa's General Plan does not specify a vibration limit for construction. For structural damage, the California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, 0.3 in/sec PPV for buildings that are found to be structurally sound but where structural damage is a major concern, and a conservative limit of 0.25 in/sec PPV for historic and some old buildings (see Table 3). The 0.3 in/sec PPV vibration limit would be applicable to properties in the vicinity of the project site.

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g. pile drivers, jackhammers, hoe rams) are used. Construction activities would include site demolition, site preparation, grading and excavation, trenching, building erection, and paving. Pile driving could be used as a method of construction.

Table 11 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet, as given by the FTA, and at a distance of 20, 70 and 120 feet, representative of the nearest structures. Project construction activities, such as pile driving, drilling, use of jackhammers, rock drills and other high-power or vibratory tools, and rolling equipment (tracked vehicles, compactors, etc.) may generate substantial vibration in the immediate vicinity. Vibration levels vary depending on soil conditions, construction methods, and equipment used.

TABLE 11 Vibration Source Levels for Construction Equipment

| Equipment | | PPV at 20 ft. (in/sec) | PPV at 25 ft. (in/sec) | PPV at 70 ft. (in/sec) | PPV at 120 ft. (in/sec) |
|----------------------------|-------------|------------------------------|------------------------------|------------------------------|-------------------------------|
| Pile Driver (Impact) | upper range | 1.480 | 1.158 | 0.373 | 0.206 |
| | typical | 0.823 | 0.644 | 0.207 | 0.115 |
| Pile Driver (Sonic) | upper range | 0.938 | 0.734 | 0.236 | 0.131 |
| | typical | 0.217 | 0.170 | 0.055 | 0.030 |
| Clam shovel drop | | 0.258 | 0.094 | 0.065 | 0.036 |

Source: Transit Noise and Vibration Impact Assessment, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, May 2006 as modified by Illingworth & Rodkin, Inc., February 2019.

Construction activity could occur as close as 20 feet and 120 feet from the residences to the east of the 731 Water Street project site, 70 feet from commercial buildings to the north of both sites and 120 feet from the restaurant to east of 731 Water Street site. As indicated in Table 11, at a distance of 20 feet, ‘upper range’ impact pile driving would be anticipated to generate vibration levels as high as 1.48 in/sec PPV, with ‘typical’ levels anticipated approximately 0.823 in/sec PPV.

‘Upper range’ impact pile driving would have the potential to produce vibration levels of 0.3 in/sec PPV or more at buildings within 90 feet, with ‘typical’ impact pile driving generating levels producing vibration levels of 0.3 in/sec PPV or more at buildings within 50 feet. Conventional buildings located within 90 feet of the site include residential building to the east of 731 Water Street and commercial buildings located 70 feet north of both sites. The US Bureau of Mines has analyzed the effects of blast-induced vibration on buildings in USBM RI 85074, and these findings have been applied to vibrations emanating from construction equipment on buildings⁵. Figure 7 presents the damage probability as reported in USBM RI 8507 and reproduced by Dowding assuming a maximum vibration level of 1.48 in/sec PPV, as anticipated for ‘upper range’ pile driving at the nearest structures. As shown on Figure 7, these studies indicate an approximate 25% probability of “threshold damage” (referred to as cosmetic damage elsewhere in this report) at vibration levels of 1.48 in/sec PPV or less, 3% probability of “minor damage” with no observations of “major damage”. At ‘typical’ vibration level of 0.823 in/sec PPV, there would be a 12% probability of “threshold damage” or less with no observation of “minor damage” or “major

4 Siskind, D.E., M.S. Stagg, J.W. Kopp, and C.H. Dowding, Structure Response and Damage Produced by Ground Vibration from Surface Mine Blasting, RI 8507, Bureau of Mines Report of Investigations, U.S. Department of the Interior Bureau of Mines, Washington, D.C., 1980.

5 Dowding, C.H., Construction Vibrations, Prentice Hall, Upper Saddle River, 1996.

damage”. Based on these data, cosmetic or threshold damage (e.g., hairline cracking in plaster, the opening of old cracks, the loosening of paint or the dislodging of loose objects, minor damage (e.g., hairline cracking in masonry or the loosening of plaster) could be anticipated to the nearest structure. Major structural damage (e.g., wide cracking or shifting of foundation or bearing walls) to adjacent structures would not be anticipated to occur assuming a maximum vibration level of 1.48 in/sec PPV.

Other heavy vibration generating construction equipment, including ‘typical’ vibratory pile driving, vibratory rollers, or clam shovel drops, would not be anticipated to exceed 0.3 in/sec PPV at distances of 20 feet or further from construction. In other surrounding areas where vibration would not be expected to cause structural damage, vibration levels may still be perceptible. However, as with any type of construction, this would be anticipated and would not be considered significant, given the intermittent and short duration of the phases that have the highest potential of producing vibration (use of jackhammers and other high-power tools). By use of administrative controls, such as notifying neighbors of scheduled construction activities and scheduling construction activities with the highest potential to produce perceptible vibration during hours with the least potential to affect nearby businesses, perceptible vibration can be kept to a minimum.

The use of impact pile driving could exceed 0.3 in/sec PPV when located within 90 feet of structures. This is a **potentially significant** impact.

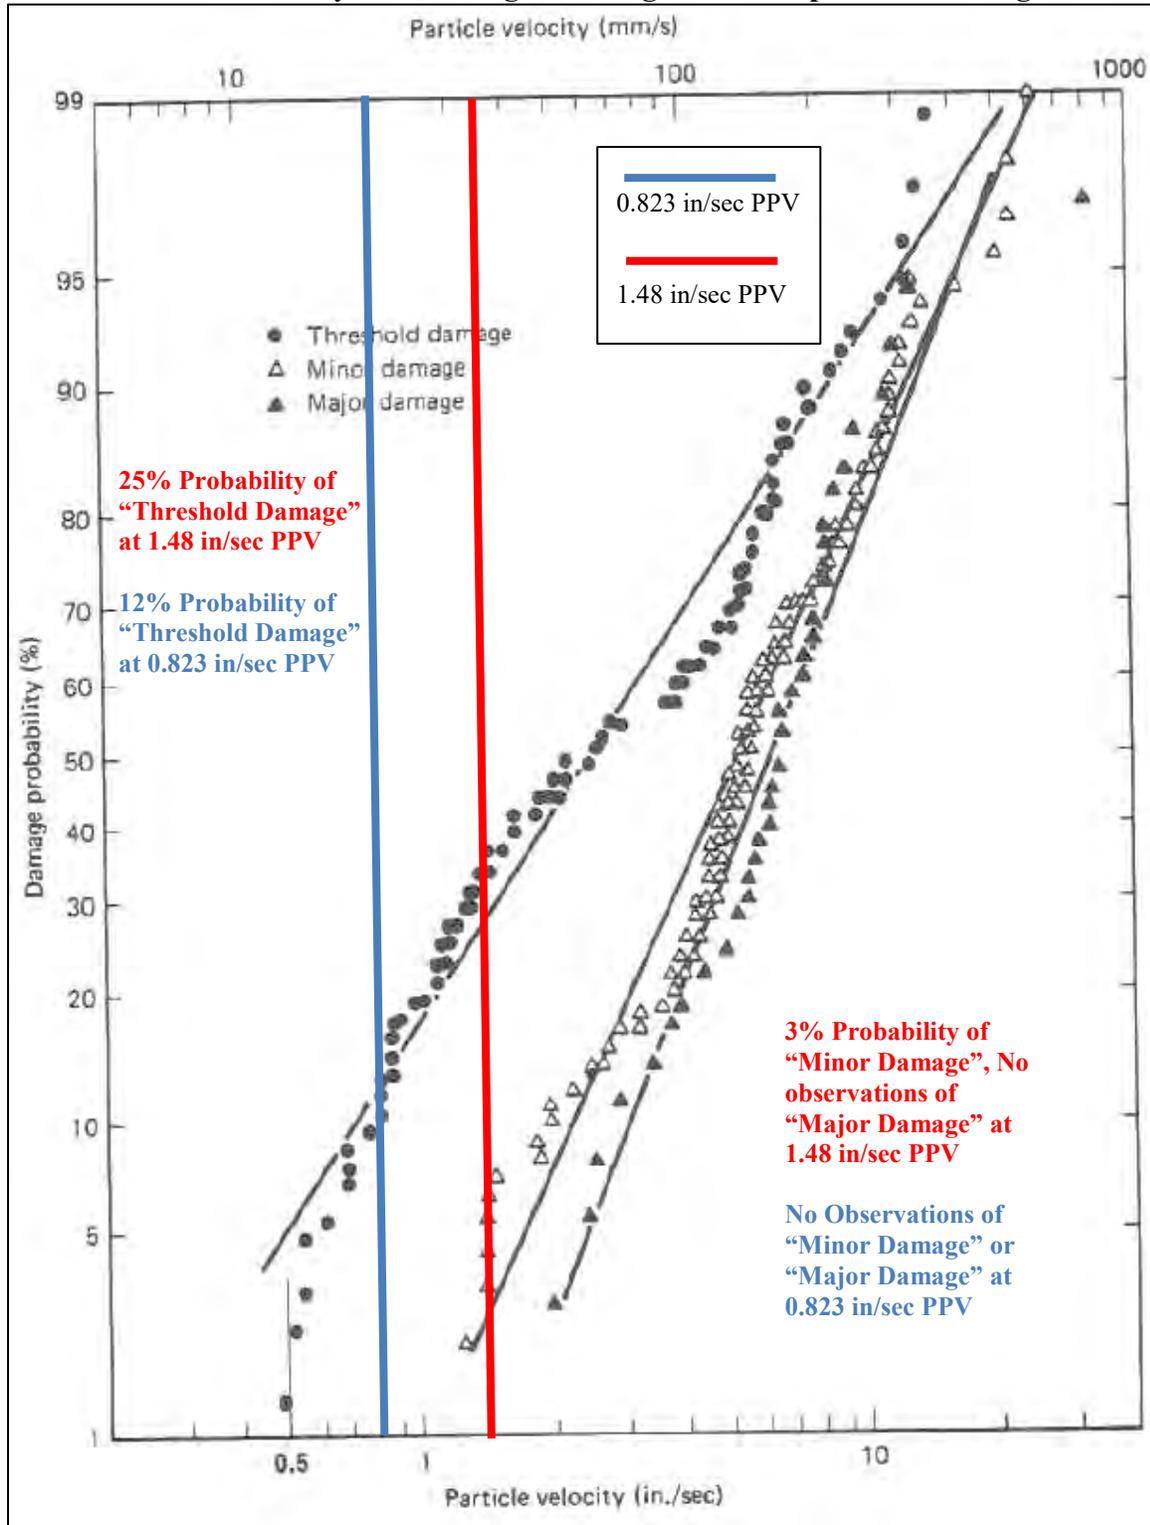

Mitigation Measure 2: The following measures are recommended to reduce vibration impacts from construction activities:

- Avoid impact pile driving where possible. Drilled piers or rammed aggregate piers cause lower vibration levels where geological conditions permit their use.
- Phase demolition, earth-moving, and ground impacting operations so as not to occur during the same time period.
- A list of all heavy construction equipment to be used for this project and anticipated time duration of using the equipment that is known to produce high vibration levels (clam shovel drops, vibratory rollers, tracked vehicles, vibratory compaction, jackhammers, hoe rams, etc.) shall be submitted to the City by the contractor. This list shall be used to identify equipment and activities that would potentially generate substantial vibration and to define the level of effort for reducing vibration levels below the thresholds.
- If pile driving is required, notify neighbors within 500 feet of the construction site of the construction schedule and that there could be noticeable vibration levels resulting from pile driving.
- If pile driving is required, foundation pile holes shall be pre-drilled to minimize the number of impacts required to seat the pile.
- If pile driving is required, jet or partially jet piles into place to minimize the number of impacts required to seat the pile.

- A construction vibration monitoring plan shall be implemented to document conditions at all structures located within 125 feet of construction prior to, during, and after pile driving. All plan tasks shall be undertaken under the direction of a licensed Professional Structural Engineer in the State of California and be in accordance with industry-accepted standard methods. The construction vibration monitoring plan should be implemented to include the following tasks:
 - Identification of sensitivity to ground-borne vibration of nearby structures. Vibration limits should be applied to all vibration-sensitive structures located within 125 feet of any pile driving activities.
 - Performance of a photo survey, elevation survey, and crack monitoring survey for each of structure of normal construction within 90 feet of pile driving activities and/or within 25 feet of other construction activities identified as sources of high vibration levels. Surveys shall be performed prior to any pile driving activity, in regular interval during pile driving, and after completion and shall include internal and external crack monitoring in structures, settlement, and distress and shall document the condition of foundations, walls and other structural elements in the interior and exterior of said structures.
 - Conduct post-survey on structures where complaints of damage have been made. Make appropriate repairs or compensation where damage has occurred as a result of construction activities.
 - Designate a person responsible for registering and investigating claims of excessive vibration. The contact information of such person shall be clearly posted on the construction site.

The implementation of these mitigation measures would reduce the impact to a **less-than-significant** level.

FIGURE 7 Probability of Cracking and Fatigue from Repetitive Loading

Source: Dowding, C.H., Construction Vibrations, Prentice Hall, Upper Saddle River, 1996 as modified by Illingworth & Rodkin, Inc., March 2019.

Impact 3: Exposure to Excessive Aircraft Noise. The project site is not located within the 65 dBA CNEL noise contour of Napa County Airport. This is a **less-than-significant** impact.

The First and Oxbow project would be located within 0.7 miles north of Napa County Airport. Aircraft noise exposure would be considered significant if the project site were exposed to aircraft noise levels exceeding 65 dBA CNEL. Based on review of the 2002 CNEL Contours for Airport Master Plan⁶, the project site is located outside of the 55 dBA CNEL noise contour. As described in the Setting Section, the primary noise source at the site is traffic on First Street and Soscol Avenue, which generates noise levels as high as 65 dBA CNEL at the site. Aircraft noise is generally not audible above traffic noise at the site. This is a **less-than-significant** impact.

Mitigation Measure 3: Not required.

Executive Summary

The proposed First and Oxbow Hotel project would include a 74-room hotel with 5,701 square feet of retail space. Based on application of standard trip generation rates, the project is anticipated to generate an average of 834 daily trips, including 40 trips during the a.m. peak hour and 66 trips during the p.m. peak hour.

Peak hour traffic conditions at the nearby intersections of Soscol Avenue/McKinstry Street, Soscol Avenue/First Street, and McKinstry Street/First Street were evaluated to determine the potential impacts associated with development of the project under Existing and Existing plus Approved conditions. Under Existing conditions, the intersections operate acceptably at LOS A, D, and A (respectively) during both peak hours and are expected to continue operating at the same levels of service under Existing plus Approved conditions. Upon the addition of project-related traffic to Existing and Existing plus Approved volumes, the intersections are expected to continue operating at LOS A, D, and A during both peak hours.

The eastern project building would be located in the Traffic Impact Overlay Zone and is subject to the City's Crucial Corridor requirements. The eastern building is expected to generate 275 daily trips per acre; therefore, the project would meet the City's Crucial Corridor requirement.

Existing and planned pedestrian, bicycle, and transit facilities would provide adequate access for the anticipated demand. No bicycle parking facilities are shown on the plans; however, the project needs to provide thirteen bicycle parking spaces on-site to meet City requirements.

Sight distance at the existing driveway on First Street is adequate for the posted 25-mph speed limit. The proposed valet area on First Street should extend the length of the eastern project building frontage. Additionally, the applicant should be responsible for street maintenance and parking enforcement upon conversion of Water Street to a private street.

Introduction

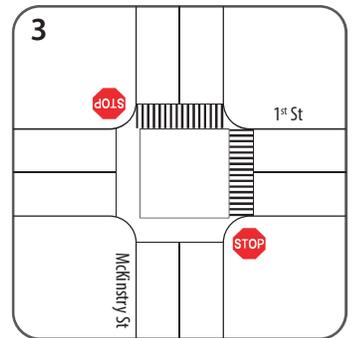

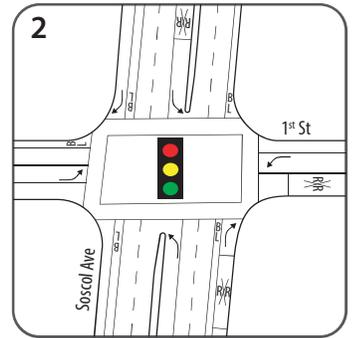

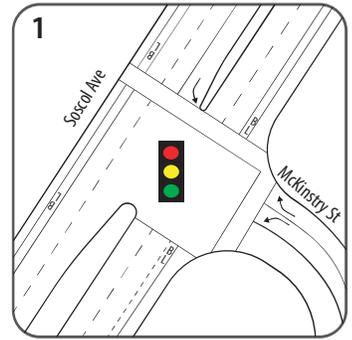

This report presents an analysis of the potential traffic impacts that would be associated with development of the proposed "First and Oxbow" hotel project to be located east of Soscol Avenue, and along the south side of First Street in the City of Napa. The traffic study was completed in accordance with the criteria established by the City of Napa, and is consistent with standard traffic engineering techniques. Further, the scope of work for the traffic study was developed based on comments from City staff on the project application.

Prelude

The purpose of a traffic impact study is to provide City staff and policy makers with data that they can use to make an informed decision regarding the potential traffic impacts of a proposed project, and any associated improvements that would be required in order to mitigate these impacts to a level of insignificance as defined by the City's General Plan or other policies. Vehicular traffic impacts are typically evaluated by determining the number of new trips that the proposed use would be expected to generate, distributing these trips to the surrounding street system based on existing travel patterns or anticipated travel patterns specific to the proposed project, then analyzing the impact the new traffic would be expected to have on critical intersections or roadway segments. Impacts relative to access for pedestrians, bicyclists, and to transit are also addressed.

Project Profile

The proposed project is a 74-room hotel project to be located along the south side of First Street, east of Soscol Avenue, with two buildings, flanking either side of the railroad tracks (37 rooms per building). The building on the west side of the railroad tracks would be accessed via a driveway east of the existing driveway curb-cut and would be right-in/right-out only. The building on the east side of the railroad tracks would be accessed via a new driveway on Water Street, located just east of the railroad tracks. All guests would arrive for check-in at the eastern building, where valet parking services would be provided. The project also includes 5,701 square feet of retail space on the ground floor with 1,873 square feet in the west building and 3,828 square feet in the eastern building. Additionally, the project assumes Water Street would become a private street as the footprint of the hotel buildings would extend approximately 20 feet into Water Street. The location of the project site is shown in Figure 1.

Transportation Setting

Operational Analysis

Study Area and Periods

The study area will consist of the project's frontage on First Street as well as the following intersections:

1. Soscol Avenue/McKinstry Street
2. Soscol Avenue/First Street
3. McKinstry Street/First Street

Operating conditions during the weekday a.m. and p.m. peak periods were evaluated to capture the highest potential impacts for the proposed project as well as the highest volumes on the local transportation network. The morning peak hour occurs between 7:00 and 9:00 a.m. and reflects conditions during the home to work or school commute, while the p.m. peak hour occurs between 4:00 and 6:00 p.m. and typically reflects the highest level of congestion during the homeward bound commute. At the study intersections, the morning peak hour occurred between 8:00 and 9:00 a.m. and the evening peak hour occurred between 5:00 and 6:00 p.m.

Study Intersections

Soscol Avenue/McKinstry Street is a signalized tee intersection located north of the project site. There is protected left-turn phasing on the southbound and westbound approaches. There is also a right-turn overlap phase on the westbound approach. Bike lanes are provided on the northbound and southbound approaches and marked crosswalks on the north and east legs.

Soscol Avenue/First Street is a signalized four-legged intersection located between the project site and the Downtown area. The north and south Soscol Avenue approaches have protected left-turn phasing and the east and west First Street approaches have permitted left-turn phasing. Bike lanes exist on the northbound and southbound approaches and crosswalks are marked on all four legs.

McKinstry Street/First Street is a four-legged, side-street stop-controlled intersection. The McKinstry Street approaches on the north and south legs are stop-controlled. The eastbound and westbound directions are uncontrolled. Marked pedestrian crosswalks are provided on all legs.

The location of the study intersection and the existing lane configurations and controls are shown in Figure 1.

Study Roadway

First Street along the project frontage is a two-lane roadway running northeast-southwest, although for the purposes of this study the roadway was considered to run east-west as this is the primary orientation throughout the City. Adjacent to the project site the roadway has a posted speed limit of 25 mph and street parking is permitted in the south side of the street near the project access.

Collision History

The collision history for the study area was reviewed to determine any trends or patterns that may indicate a safety issue. Collision rates were calculated based on records available from the California Highway Patrol as published in their *Statewide Integrated Traffic Records System* (SWITRS) reports. The most current five-year period available is January 1, 2012 through December 31, 2016.

As presented in Table 1, the calculated collision rates for the study intersections were compared to average collision rates for similar facilities statewide, as indicated in *2013 Collision Data on California State Highways*, California Department of Transportation (Caltrans). The collision rate calculations are provided in Appendix A.

Table 1 – Collision Rates at the Study Intersections

| Study Intersection | Number of Collisions (2012-2016) | Calculated Collision Rate (c/mve) | Statewide Average Collision Rate (c/mve) |
|----------------------------|----------------------------------|-----------------------------------|--|
| 1. Soscol Ave/McKinstry St | 5 | 0.13 | 0.21 |
| 2. Soscol Ave/First St | 18 | 0.39 | 0.27 |
| 3. McKinstry St/First St | 4 | 0.32 | 0.15 |

Note: c/mve = collisions per million vehicles entering; **bold** text indicates rates higher than the Statewide average

As shown, both the intersections of Soscol Avenue/First Street and McKinstry Street/First Street have existing collision rates which are higher than the average for similar facilities. It should be noted that the Soscol Avenue/First Street has a high volume of collisions involving injuries.

The majority of crashes at Soscol Avenue/First Street were either rear-end or sideswipe collisions, both of which are typical of signalized intersections where congestion occurs. The City may wish to pursue changes to signal timing to improve coordination as a means of reducing the incidence of this type of collision.

With only four collisions at McKinstry Street/First Street, there was no clear pattern. However, since the percent involving injuries was very low, the above-average collision rate does not translate to a safety concern.

Alternative Modes

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian signal phases, curb ramps, curb extensions, and various streetscape amenities such as lighting, benches, etc. In general, a network of sidewalks, crosswalks, pedestrian signals, and curb ramps provide access for pedestrians in the vicinity of the proposed project site. There are existing sidewalks on both sides of First Street and Soscol Avenue and marked crosswalks on all four legs of Soscol Avenue/First Street and McKinstry Street/First Street. The pedestrian facilities in the Downtown area are lit by a system of post-top street lights.

Bicycle Facilities

The *Highway Design Manual*, Caltrans, 2017, classifies bikeways into four categories:

- **Class I Multi-Use Path** – a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized.
- **Class II Bike Lane** – a striped and signed lane for one-way bike travel on a street or highway.
- **Class III Bike Route** – signing only for shared use with motor vehicles within the same travel lane on a street or highway.
- **Class IV Bikeway** – also known as a separated bikeway, a Class IV Bikeway is for the exclusive use of bicycles and includes a separation between the bikeway and the motor vehicle traffic lane. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

In the project vicinity, Class II bike lanes exist on Soscol Avenue and First Street to the east and west, though not along the project frontage. Table 2 summarizes the existing and planned bicycle facilities in the project area, as

contained in the *City of Napa Bicycle Plan*. It is noted that the plan includes the provision of Class II bike lanes along the project frontage on First St as a high priority project.

| Table 2 – Bicycle Facility Summary | | | | |
|---|--------------|-----------------------|--------------------|------------------|
| Status Facility | Class | Length (miles) | Begin Point | End Point |
| Existing | | | | |
| Soscol Ave | II | 1.76 | Sixth St | La Homa Dr |
| First St | II | 0.09 | First St Bridge | Soscol Ave |
| First St | II | 0.19 | Vernon St | Juarez St |
| Planned | | | | |
| First St | II | 0.15 | Soscol Ave | Vernon St |
| McKinstry St | III | 0.33 | Soscol Ave | Water St |

Source: *City of Napa Bicycle Plan, W-Trans, 2012*

Transit Facilities

Transit Services in the City of Napa, and throughout Napa County, are provided by Napa Valley Transit (VINE). VINE Route 10 provides regional service to destinations throughout the City of Napa and the City of Calistoga and stops on the east side of Soscol Avenue, just south of the project site. Route 10 operates on weekdays from 5:00 a.m. to 10:00 p.m. with one-hour headways. Saturday service operates from 6:00 a.m. to 8:30 p.m. and Sunday service operates from 7:30 a.m. to 7:30 p.m. Headways during the weekend are approximately one-hour.

Two to three bicycles can be carried on most VINE buses. Bike rack space is on a first-come, first-served basis. Additional bicycles are allowed on VINE buses at the discretion of the driver.

VINE Go, also known as paratransit, or door-to-door service, is available for those who are unable to independently use the transit system due to a physical or mental disability. VINE paratransit is designed to serve the needs of individuals with disabilities in the cities of Calistoga, St. Helena, Napa, American Canyon, the Town of Yountville and the unincorporated areas of Napa County.

It is noted that the Soscol Transit Center is located approximately 0.4 miles south of the site so transit routes not offered at the nearest stop could be accessed relatively conveniently. Additionally, the Napa Valley Wine Train McKinstry Street station is located approximately 0.2 miles from the site, which is within an acceptable walking distance for guests wishing to take advantage of this local attraction.

Capacity Analysis

Intersection Level of Service Methodologies

Level of Service (LOS) is used to rank traffic operation on various types of facilities based on traffic volumes and roadway capacity using a series of letter designations ranging from A to F. Generally, Level of Service A represents free flow conditions and Level of Service F represents forced flow or breakdown conditions. A unit of measure that indicates a level of delay generally accompanies the LOS designation.

The study intersections were analyzed using methodologies published in the *Highway Capacity Manual (HCM)*, Transportation Research Board, 2010. This source contains methodologies for various types of intersection control, all of which are related to a measurement of delay in average number of seconds per vehicle.

The Levels of Service for the intersections with side-street stop controls, or those which are unsignalized and have one or two approaches stop controlled, were analyzed using the “Two-Way Stop-Controlled” intersection capacity method from the HCM. This methodology determines a level of service for each minor turning movement by estimating the level of average delay in seconds per vehicle. Results are presented for individual movements together with the weighted overall average delay for the intersection.

The study intersections that are currently controlled by a traffic signal, or may be in the future, were evaluated using the signalized methodology from the HCM. This methodology is based on factors including traffic volumes, green time for each movement, phasing, whether or not the signals are coordinated, truck traffic, and pedestrian activity. Average stopped delay per vehicle in seconds is used as the basis for evaluation in this LOS methodology. For purposes of this study, delays were calculated using signal timing provided by the City.

The ranges of delay associated with the various levels of service are indicated in Table 3.

| LOS | Two-Way Stop-Controlled | Signalized |
|------------|---|---|
| A | Delay of 0 to 10 seconds. Gaps in traffic are readily available for drivers exiting the minor street. | Delay of 0 to 10 seconds. Most vehicles arrive during the green phase, so do not stop at all. |
| B | Delay of 10 to 15 seconds. Gaps in traffic are somewhat less readily available than with LOS A, but no queuing occurs on the minor street. | Delay of 10 to 20 seconds. More vehicles stop than with LOS A, but many drivers still do not have to stop. |
| C | Delay of 15 to 25 seconds. Acceptable gaps in traffic are less frequent, and drivers may approach while another vehicle is already waiting to exit the side street. | Delay of 20 to 35 seconds. The number of vehicles stopping is significant, although many still pass through without stopping. |
| D | Delay of 25 to 35 seconds. There are fewer acceptable gaps in traffic, and drivers may enter a queue of one or two vehicles on the side street. | Delay of 35 to 55 seconds. The influence of congestion is noticeable, and most vehicles have to stop. |
| E | Delay of 35 to 50 seconds. Few acceptable gaps in traffic are available, and longer queues may form on the side street. | Delay of 55 to 80 seconds. Most, if not all, vehicles must stop and drivers consider the delay excessive. |
| F | Delay of more than 50 seconds. Drivers may wait for long periods before there is an acceptable gap in traffic for exiting the side streets, creating long queues. | Delay of more than 80 seconds. Vehicles may wait through more than one cycle to clear the intersection. |

Reference: *Highway Capacity Manual*, Transportation Research Board, 2010

Traffic Operation Standards

City of Napa

The City of Napa established a Level of Service (LOS) Standard of mid-LOS D in Policy T-2.1 of *Envision Napa 2020: City of Napa General Plan*. This translates to an allowable average delay of 45 seconds at signalized intersections. The policy also establishes an LOS Standard of mid-range LOS E for unsignalized intersections, which translates to an allowable average delay of 40 seconds.

Existing Conditions

The Existing Conditions scenario provides an evaluation of current operation based on existing traffic volumes during the a.m. and p.m. peak periods. This condition does not include project-generated traffic volumes. Volume data provided by the City and used in this analysis for the intersections of Soscol Avenue/McKinstry Street and Soscol Avenue/First Street was collected on Wednesday, December 2, 2015 while local schools were in session. Volume data for McKinstry Street/First Street was collected on Tuesday, August 1, 2017.

Intersection Levels of Service

Under Existing Conditions, the study intersections operate acceptably at mid-LOS D or better for signals and mid-LOS B or better for stop-controlled approaches at McKinstry Street/First Street. The Existing traffic volumes are shown in Figure 2. A summary of the intersection level of service calculations is contained in Table 4 and copies of the Level of Service calculations for all evaluated scenarios are provided in Appendix B.

Table 4 – Existing Peak Hour Intersection Levels of Service

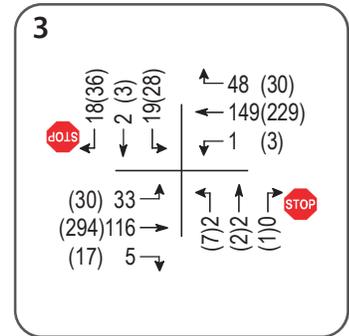

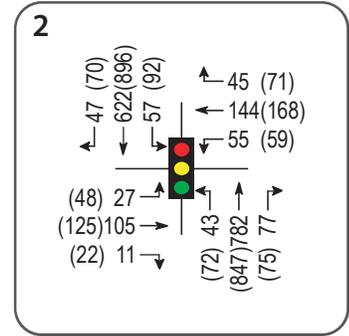

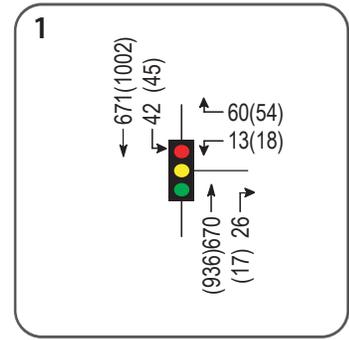

| Study Intersection <i>Approach</i> | AM Peak | | PM Peak | |
|---|-------------|----------|-------------|----------|
| | Delay | LOS | Delay | LOS |
| 1. Soscol Ave/McKinstry St | 5.9 | A | 6.3 | A |
| 2. Soscol Ave/First St | 38.3 | D | 36.7 | D |
| 3. McKinstry St/First St | 1.9 | A | 1.9 | A |
| <i>Northbound (McKinstry St) Approach</i> | <i>12.3</i> | <i>B</i> | <i>14.9</i> | <i>B</i> |
| <i>Southbound (McKinstry St) Approach</i> | <i>11.1</i> | <i>B</i> | <i>13.0</i> | <i>B</i> |

Notes: Delay is measured in avg. seconds/vehicle; LOS = Level of Service; Delay for stop-controlled approaches is in *italics*

Existing plus Approved Conditions

The Existing plus Approved Conditions scenario provides an evaluation of operation with traffic from approved projects, as well as projects that are actively going through the City's development review process, near the study area added to existing a.m. and p.m. peak hour traffic volumes. Information on the following projects was provided by City staff for inclusion in the Existing plus Approved Conditions analysis. Following are the assumptions related to these projects. The estimated vehicle trips for the list of approved and proposed projects below are included in Appendix C.

Archer Hotel is an approved boutique hotel consisting of 186 rooms that would be located on the 1200 block of First Street between Coombs Street and Franklin Street in Downtown Napa. The hotel is proposed as a part of the Shops at Napa Center redevelopment project. As contained in the *Traffic Analysis for Archer Napa Hotel Project*, prepared by Kimley-Horn and Associates, the hotel is expected to generate 1,125 trips per day, including 73 trips during the weekday morning peak hour and 83 trips during the evening peak hour. The same trip distribution assumptions used in the traffic study for the project were used in this analysis, including 10 percent to/from Soscol

LEGEND

- xx AM Peak Hour Volume
- (xx) PM Peak Hour Volume

Traffic Impact Study for the First and Oxbow Hotel
Figure 2 – Existing Traffic Volumes

Avenue north of First Street, 12 percent to/from Soscol Avenue south of First Street, and 8 percent to/from First Street east of Soscol Avenue. The remaining project trips would be outside this project's study area.

1031 McKinstry Street is a planned two-level restaurant with retail space. City staff indicated that the project would include 2,174 square feet of restaurant/retail space and 1,487 square feet of outdoor dining. For the purposes of calculating the potential trip generation, the first-floor restaurant/retail space (1,285 square feet) was assumed to be retail and the second-floor restaurant/retail space (889 square feet) along with the outdoor dining space (1,487 square feet) was assumed to be a quality restaurant. Based on these assumptions and use of standard Institute of Transportation Engineers (ITE) rates, the project would be expected to generate 271 daily trips on average, with 3 trips during the morning peak hour and 21 trips during the evening peak hour. Due to the close proximity to the First and Oxbow Hotel site, the same trip distribution assumptions were applied as used for the project, including 35 percent to/from Soscol Avenue north of First Street, 45 percent to/from Soscol Avenue south of First Street, 10 percent to/from First Street east of Soscol Avenue and 10 percent to/from First Street west of Soscol Avenue.

Black Elk Hotel is an approved boutique hotel consisting of 27 rooms and 6,028 square feet of quality restaurant located on 728 First Street in the City of Napa. There is a single-family home on the site that would be demolished to make room for the project. Based on the standard ITE trip generation rates, the project is expected to generate 624 new trips per day, including 15 trips during the morning peak hour and 52 trips during the evening peak hour. Due to the close proximity to the First and Oxbow Hotel site, the same trip distribution assumptions were applied as used for the proposed project.

Bounty Hunter Building includes a quality restaurant, general office space, and specialty retail located at 1005 and 1025 First Street. City staff indicated the project would consist of 4,900 square feet of quality restaurant space, 13,035 square feet of general office space, and 980 square feet of specialty retail. Along with the standard ITE trip generation rates, the internal capture rates per the *Downtown Napa Specific Plan* for the Downtown Area west of Soscol Avenue were used to generate trips produced by the Bounty Hunter Building. These include 436 daily trips on average, with 19 trips during the morning peak hour and 45 trips during the evening peak hour. The same trip distribution assumptions used in the traffic study for the project were used in this analysis, including 10 percent to/from Soscol Avenue north of First Street, 12 percent to/from Soscol Avenue south of First Street, and 8 percent to/from First Street east of Soscol Avenue. The remaining project trips would be outside this project's study area.

Wine Train Hotel includes the expansion of the existing train station located at 1275 McKinstry Street and development of a 151-room hotel, a 6,370 square-foot restaurant, and 5,310 square-foot of retail. Based on trip generation rates, the project is expected to generate 1,996 new trips per day, including 81 trips during the morning peak hour and 161 trips during the evening peak hour. Because the Wine Train Hotel expansion would be located near the First and Oxbow Hotel, the same trip distribution assumptions used for the hotel were applied.

Franklin Station Development would demolish the existing 18,010 square-foot post office and 7,150 square-foot hardware store and would construct a 163-room hotel with 7,000 square feet of retail. Based on the use of ITE rates, the project would be expected to result in a net decrease of 310 trips per day, with a decrease of 73 trips during the morning peak period and a decrease of 96 trips during the evening peak period.

Ritz-Carlton is a planned 351-room hotel to be located at 1515 Silverado Trail that would also include a 4,704 square-foot restaurant and 15,009 square feet of retail. This project would be expected to generate 3,895 daily trips, with 182 trips during the morning peak hour and 305 trips during the evening peak hour, per ITE rates. It was assumed ten percent of trips would be to/from First Street west of Soscol Avenue and the remaining trips would be outside the study area.

Westin Hotel Expansion would expand the existing hotel located at 1274 McKinstry Street with 32 additional hotel rooms and a 4,557 square-foot restaurant. The estimated trip generation would include 650 net new daily trips, with 18 trips during the a.m. peak and 55 trips during the p.m. peak period. The same trip distribution assumptions as used for the First and Oxbow Hotel were applied.

Cinedome Master Plan is an approved mixed-use development to be located on both sides of Pearl Street, east of Main Street and west of Soscol Avenue. The project would include 45 dwelling units, 65,000 square feet of office space, 11,000 square feet for restaurant uses, and 11,000 square feet of retail. Based on standard ITE rates, the project would be anticipated to generate 2,299 daily trips on average, with 114 trips during the morning peak period and 228 trips during the evening peak period. It was assumed 12 percent of trips would be oriented to/from Soscol Avenue south of First Street, ten percent would be to/from Soscol Avenue north of McKinstry Street, eight percent would be to/from First Street east of McKinstry Street, and the remaining trips would travel to/from outside the study area.

Civic Center would redevelop the existing 26,100 square-foot government office with 127,400 square feet of government office and a fire station located at 1600 First Street and 1115 Seminary Street. The trip generation for this project was estimated using standard ITE rates for "Government Office Building" (LU #730). The estimated trip generation would include 2,288 net new daily trips, with 338 trips during the morning peak period and 173 trips during the evening peak period. Due to the close proximity of the project to the Archer Hotel, the same trip distribution assumptions as applied for the Archer Hotel were used.

Superblock Development would demolish the existing 49,000 square-foot government office building and fire station and construct a 275-room hotel, 115 multifamily dwelling units, and 36,500 square feet for retail land uses. The project would be expected to generate 3,412 net new daily trips, with 52 trips during the morning peak and 284 trips during the evening peak. It was assumed ten percent of trips would be to/from Soscol Avenue north of First Street, eight percent would be to/from First Street east of McKinstry Street, and the remaining trips would travel outside the study area.

Register Square includes the development of 51 townhouses and 6,000 square feet of commercial space that would be located at 1615 Second Street. The trip generation for this project was estimated using standard ITE rates for "Single Family Detached Housing" (LU #210) and "Shopping Center" (LU #820). The estimated trip generation would include 708 daily trips on average, with 44 trips during the morning peak period and 73 trips during the evening peak period. The same trip distribution assumptions used for the Superblock Development were applied.

1300 Main Street is a planned project made up of 14,227 square feet of office space and 7,222 square feet of restaurant space. Based on trip generation rates, the project is expected to generate 744 new trips per day, including 22 trips during the morning peak hour and 72 trips during the evening peak hour. The same trip distribution assumptions used for the Cinedome Master Plan were applied.

Coombs Bed and Breakfast is a planned 15-room hotel project that would replace the existing funeral home located at 605 and 623 Coombs Street. Application of standard rates for "Hotel" (LU #310) estimates 125 daily trips, with seven trips during the morning peak and nine trips during the evening peak. It was assumed ten percent of trips would be travel to/from Soscol Avenue north of First Street and the remaining trips would be oriented outside the study area.

Napa River Inn Expansion is a planned project that would add 26 rooms to the existing inn located at 500 Main Street. The project would be expected to generate 217 daily trips, with 12 trips during the morning peak and 16 trips during the evening peak. Due to the close proximity of the project to the Coombs Bed and Breakfast, the same trip distribution assumptions used for the Coombs Bed and Breakfast were applied.

1300 First Street includes 4,682 square feet of commercial development and would generate 177 daily trips on average, with four trips during the morning peak period and 18 trips during the evening peak period, per ITE rates. Due to the close proximity of the project to the Archer Hotel, the same trip distribution assumptions as applied for the Archer Hotel were used.

Intersection Levels of Service

Under Existing plus Approved conditions, the study intersections are expected to continue operating acceptably at the same levels of service as under Existing conditions during both peak hours. Existing plus Approved traffic volumes are shown in Figure 3, and a summary of the Existing plus Approved intersection level of service calculations is contained in Table 5. It should be noted that the intersection delay improves slightly at the intersection of Soscol Avenue/First Street with the addition of “approved projects” trips. These trips are generally added to movements which have delay below the weighted average of the intersection and therefore decrease the overall average intersection delay.

Table 5 – Existing plus Approved Peak Hour Intersection Levels of Service

| Study Intersection Approach | AM Peak | | PM Peak | |
|---|-------------|----------|-------------|----------|
| | Delay | LOS | Delay | LOS |
| 1. Soscol Ave/McKinstry St | 6.4 | A | 8.2 | A |
| 2. Soscol Ave/First St | 37.3 | D | 36.0 | D |
| 3. McKinstry St/First St | 2.7 | A | 3.8 | A |
| <i>Northbound (McKinstry St) Approach</i> | <i>14.9</i> | <i>B</i> | <i>24.1</i> | <i>C</i> |
| <i>Southbound (McKinstry St) Approach</i> | <i>12.2</i> | <i>B</i> | <i>17.1</i> | <i>C</i> |

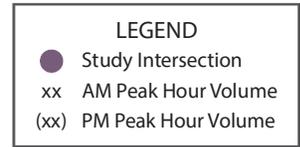

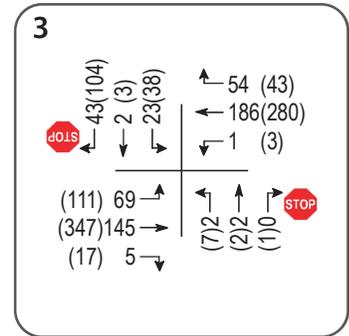

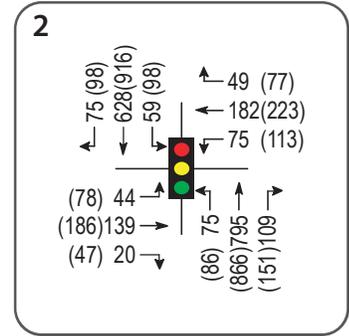

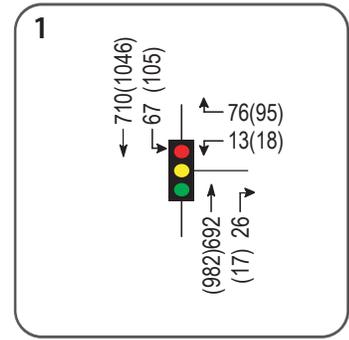

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Delay for stop-controlled approaches is shown in *italics*

Future Conditions

Future volumes for the horizon year 2040 were calculated based on output from the *Napa Solano Travel Demand Model*, maintained by the Solano Transportation Authority (STA). Base year (2015) and future (2040) segment volumes for the weekday p.m. peak period were used to calculate growth factors for the study intersections and roadway segments.

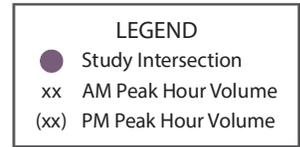

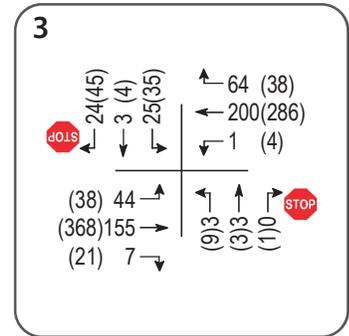

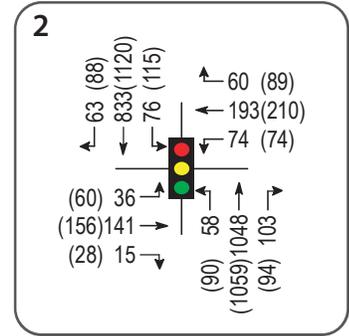

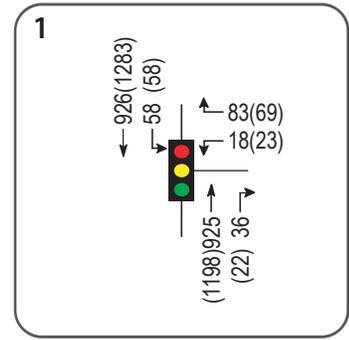

Volumes at the intersection of Soscol Avenue and McKinstry Street are expected to grow by a factor of 1.38 and 1.28 during the morning and evening peak periods, respectively. Similarly, volumes at Soscol Avenue/First Street are expected to increase by a factor of 1.34 and 1.25 during the a.m. and p.m. peaks, respectively. There are no projected growth volumes on the *Napa Solano Travel Demand Model* for the intersection of McKinstry Street/First Street so the growth factors for the nearby intersection of Soscol Avenue/First Street were used to project future volumes at this location.

Under the anticipated future volumes, the study intersections are expected to continue operating acceptably at LOS D or better overall. Future volumes are shown in Figure 4 and operating conditions are summarized in Table 6.

Traffic Impact Study for the First and Oxbow Hotel
Figure 3 – Existing plus Approved Traffic Volumes

Traffic Impact Study for the First and Oxbow Hotel

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Delay for stop-controlled approaches is shown in *italics*

Project Description

The proposed First and Oxbow Hotel includes two buildings flanking either side of the railroad tracks with 37 rooms per building. The western building includes 1,873 square feet of retail and the easterly building includes 3,828 square feet of retail. The building west of the railroad tracks would be accessed via a driveway located east of the existing driveway curb cut that would be limited to right-in/right-out movements with left-turn movements prohibited. The eastern building would be accessed via a new driveway located on the south side of the building with access to Water Street. Traffic exiting (and entering) the eastern building would gain access to Water Street via McKinstry Street. All hotel patrons would arrive at the eastern building for check-in and vehicles would be parked by valet drivers in both parking +garages. The project site plan is shown in Figure 5.

Trip Generation

The anticipated trip generation for the proposed project was estimated using standard rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017 for Hotels (Land Use #310) and Shopping Centers (Land Use #820), as these descriptions most closely match the proposed project. Based on these rates, the proposed project is expected to generate an average of 834 trips per day, including 40 a.m. peak hour trips and 66 trips during the p.m. peak hour. These results are summarized in Table 7.

Table 7 – Trip Generation Summary

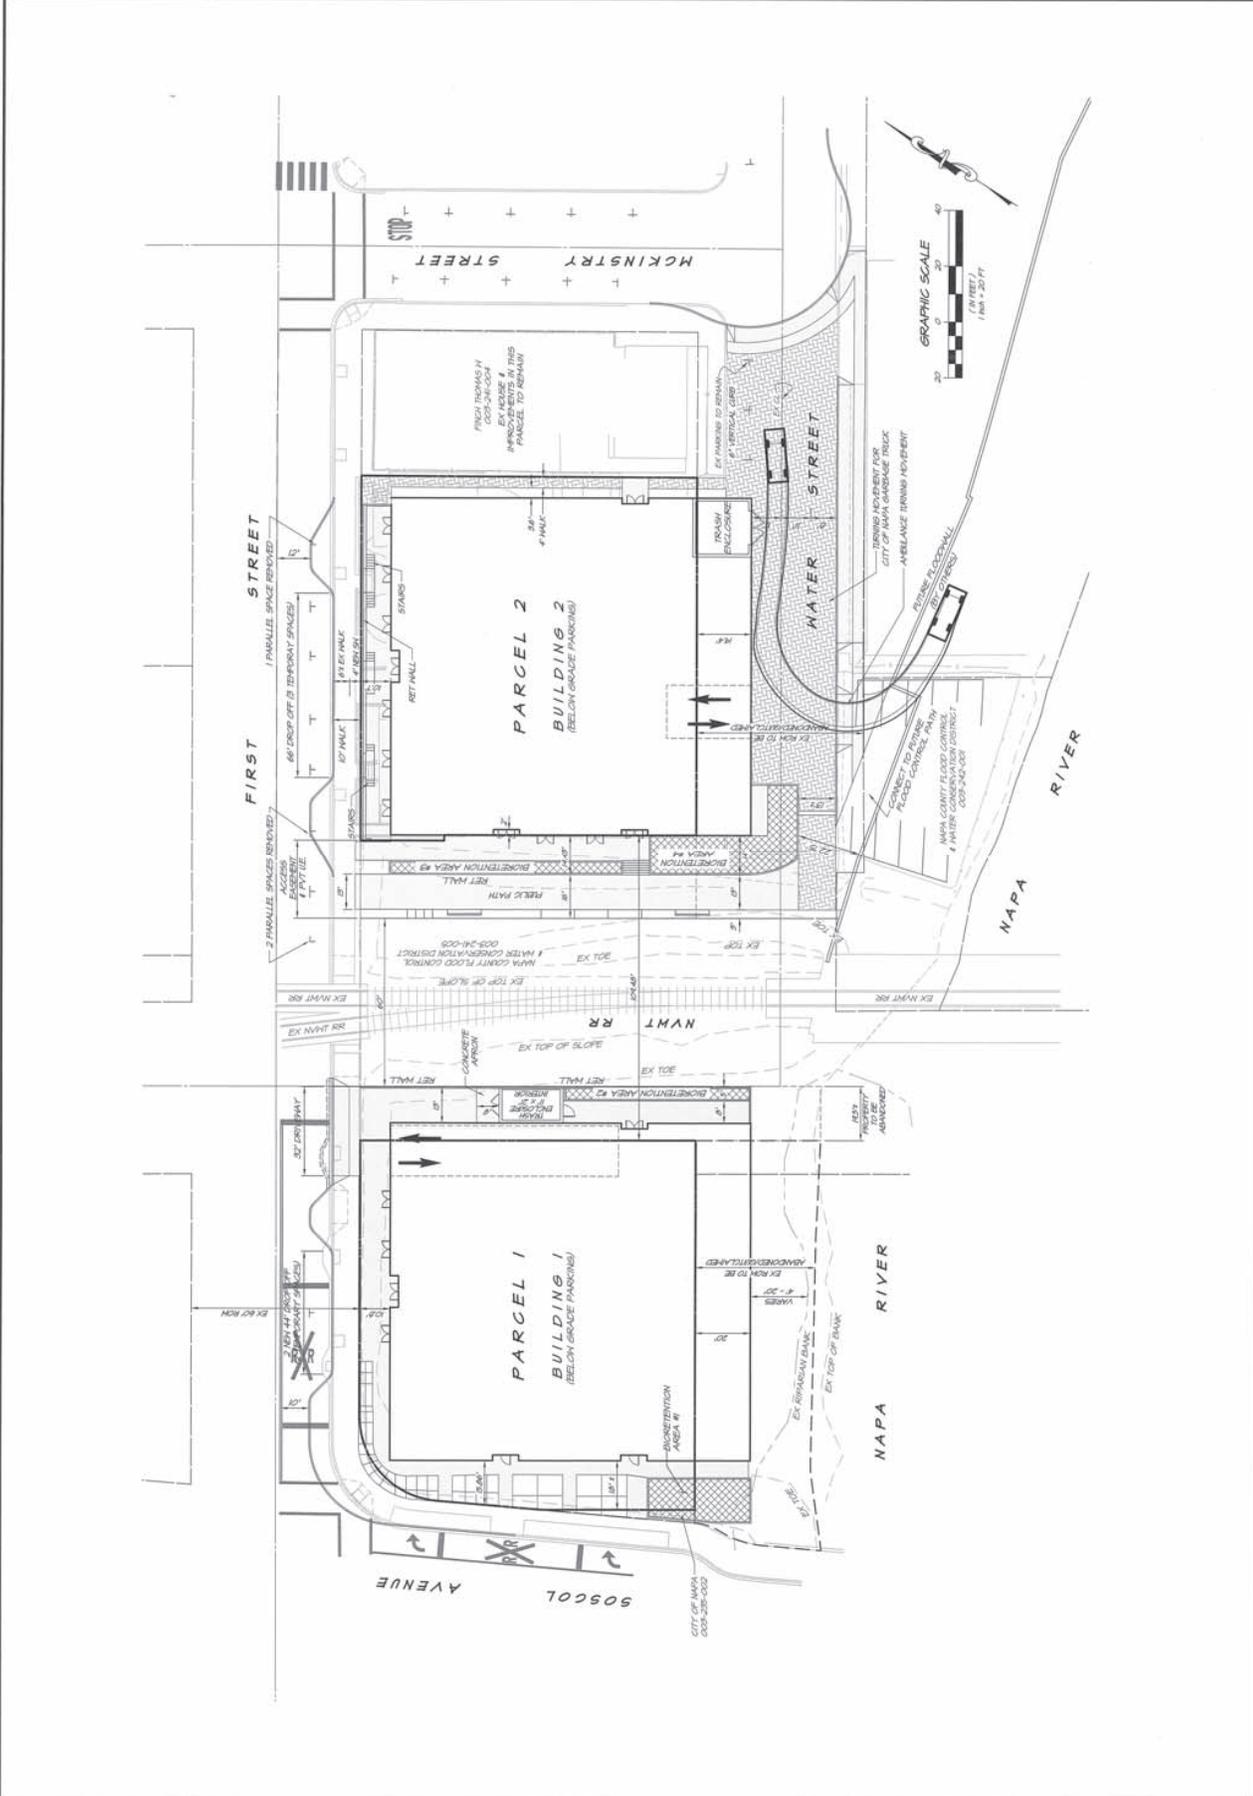

| Land Use | Units | Daily | | AM Peak Hour | | | | PM Peak Hour | | | |
|-----------------|-----------|-------|------------|--------------|-----------|-----------|-----------|--------------|-----------|-----------|-----------|
| | | Rate | Trips | Rate | Trips | In | Out | Rate | Trips | In | Out |
| Hotel | 74 rooms | 8.36 | 619 | 0.47 | 35 | 21 | 14 | 0.60 | 44 | 23 | 21 |
| Shopping Center | 5,701 ksf | 37.75 | 215 | 0.94 | 5 | 3 | 2 | 3.81 | 22 | 11 | 11 |
| Total | | | 834 | | 40 | 24 | 16 | | 66 | 34 | 32 |

Note: ksf = 1,000 sf

Trip Distribution

The pattern used to allocate new project trips to the street network was determined by reviewing existing turning movements at the study intersections as well as anticipated travel patterns for patrons of the project. Routing assumptions were made to account for the potential additional localized project traffic at the three study intersections associated with the project site being separated into two unconnected buildings and the right-

in/right-out only operation of the western buildings project driveway. The proposed operation of check-in for the hotel was also considered in developing the inbound routing assumptions. The applied distribution assumptions and resulting trips are shown in Table 8.

Table 8 – Trip Distribution Assumptions

| Route | Percent | Daily Trips | AM Trips | PM Trips |
|---------------------------------|-------------|-------------|-----------|------------|
| Soscol Ave (South) | 45% | 375 | 18 | 30 |
| Soscol Ave (North) | 35% | 292 | 14 | 23 |
| First St (West of Soscol Ave) | 10% | 83 | 4 | 7 |
| First St (East of McKinstry St) | 10% | 83 | 4 | 7 |
| TOTAL | 100% | 833* | 40 | 67* |

Note: * Trips may not add up to the calculated trip generation due to rounding

Comparison to the Downtown Napa Specific Plan

Per the City's 2012 *Downtown Napa Specific Plan* (DNSP), the project is located in the Oxbow area zoned "Tourist Commercial" (CT), which allows uses oriented towards tourists and other visitors to the community. The corresponding General Plan category is "Mixed Use," which could include retail and office uses. The City has noted that there has been a shift from the mixed uses assumed in the DNSP from the currently proposed uses, which are predominantly hotels. As requested by City Staff, the anticipated trip generation for the proposed project was compared to the potential trip generation for retail and office uses to determine the equivalent amount of office and retail that would generate the same number of trips as the proposed project. The anticipated trip generation for these uses was estimated using standard rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017 for "General Office Building" (Land Use #710) and "Shopping Center" (Land Use #820). The results are summarized in Table 9.

Table 9 – Trip Generation Comparison

| Land Use | Units | Daily | | AM Peak Hour | | | | PM Peak Hour | | | |
|------------------|----------|-------|-------|--------------|-------|----|-----|--------------|-------|----|-----|
| | | Rate | Trips | Rate | Trips | In | Out | Rate | Trips | In | Out |
| Proposed Project | | | 834 | | 40 | 24 | 16 | | 66 | 34 | 32 |
| Shopping Center | 17.4 ksf | 37.75 | 657 | 0.94 | 16 | 10 | 6 | 3.81 | 66 | 32 | 34 |
| Office | 57 ksf | 9.74 | 555 | 1.16 | 66 | 57 | 9 | 1.15 | 66 | 10 | 56 |

Note: ksf = 1,000 sf

The amount of retail and office uses that would generate an equivalent number of p.m. peak hour trips as the proposed project would include 17,400 square feet of retail and 57,000 square feet of office uses. Under its current zoning, the site could generate higher volumes with other permitted uses compared to what is projected for the proposed project. In comparing the proposed hotel use to shopping center uses, these would have similar directionality in traffic during the more critical p.m. peak hour. However, in comparison to office uses, there would be more traffic leaving the site during the p.m. peak hour generated by the office use. Therefore, the project has similar or less directionality impacts compared with other allowable uses in the Specific Plan Area.

Crucial Corridor Analysis

Per the City's General Plan, the City of Napa has established a circulation policy in its traffic management strategy that reserves traffic capacity within major corridors for community-wide circulation. These corridors are known as "crucial corridors" and City policy has limited development with direct access to these streets to low traffic-

generating uses. Per the *City of Napa Policy Guidelines for Traffic Impact Analysis for Private Developmental Review*, uses along crucial corridors shall generate less than 520 daily trips per gross acre.

The proposed western building would front Soscol Avenue which is a designated crucial corridor and is therefore required to meet the City’s crucial corridor requirements. This portion of the project is expected to generate 380 daily trips as shown in Table 10.

| Land Use | Units | Daily | |
|-----------------|-----------|-------|------------|
| | | Rate | Trips |
| Hotel | 37 rooms | 8.36 | 309 |
| Shopping Center | 1.873 ksf | 37.75 | 71 |
| Total | | | 380 |

Note: ksf = 1,000 sf

Per the site plan, the proposed western building would have a gross square footage of 60,307 square feet, which translates to approximately 1.38 acres. The building is anticipated to generate approximately 275 daily trips per acre; therefore, the project meets the City’s crucial corridor requirement.

Intersection Operation

Existing plus Project Conditions

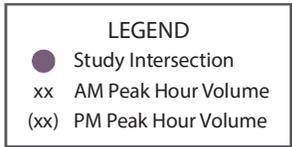

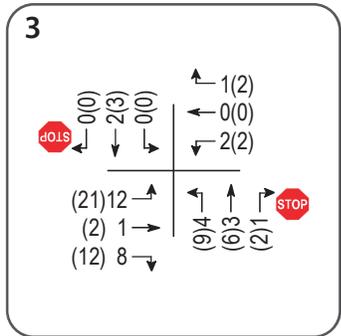

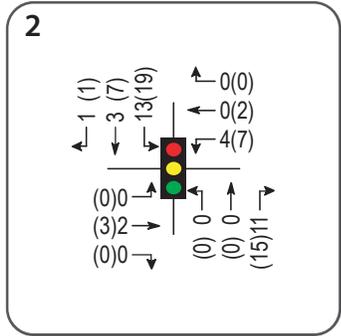

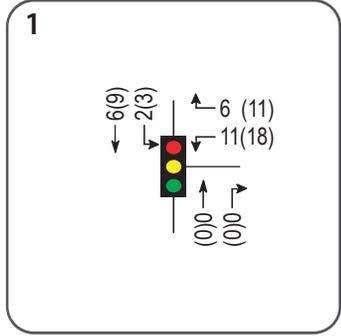

Upon the addition of project-related traffic to the Existing volumes, the study intersections would be expected to continue operating acceptably at the same levels of service during both peak hours. Project traffic volumes are shown in Figure 6, and the resulting levels of service are summarized in Table 11.

| Study Intersection <i>Approach</i> | Existing Conditions | | | | Existing plus Project | | | |
|---|---------------------|----------|-------------|----------|-----------------------|----------|-------------|----------|
| | AM Peak | | PM Peak | | AM Peak | | PM Peak | |
| | Delay | LOS | Delay | LOS | Delay | LOS | Delay | LOS |
| 1. Soscol Ave/McKinstry St | 5.9 | A | 6.3 | A | 6.2 | A | 6.9 | A |
| 2. Soscol Ave/First St | 38.3 | D | 36.7 | D | 38.1 | D | 36.6 | D |
| 3. McKinstry St/First St | 1.9 | A | 1.9 | A | 2.3 | A | 2.5 | A |
| <i>Northbound (McKinstry St) Approach</i> | <i>12.3</i> | <i>B</i> | <i>14.9</i> | <i>B</i> | <i>12.6</i> | <i>B</i> | <i>16.5</i> | <i>C</i> |
| <i>Southbound (McKinstry St) Approach</i> | <i>11.1</i> | <i>B</i> | <i>13.0</i> | <i>B</i> | <i>11.6</i> | <i>B</i> | <i>14.0</i> | <i>B</i> |

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Delay for stop-controlled approaches is shown in *italics*

It should be noted that with the addition of project-related traffic volumes, average delay at the intersection of Soscol Avenue/First Street decreases during both peak hours. While this is counter-intuitive, this condition occurs when a project adds trips to movements that are currently underutilized or have delays that are below the intersection average, resulting in a better balance between approaches and lower overall average delay.

Finding – The study intersections would be expected to continue operating acceptably with imperceptible changes in average delay upon the addition of project-related traffic to Existing volumes.

Traffic Impact Study for the First and Oxbow Hotel
 Figure 6 – Project Traffic Volumes

Existing plus Approved plus Project Conditions

Upon the addition of project-generated traffic to the anticipated Existing plus Approved volumes, the study intersections are expected to continue operating acceptably during both peak hours. The Existing plus Approved plus Project operating conditions are summarized in Table 12.

Table 12 – Existing + Approved and Existing + Approved + Project Peak Hour Intersection Levels of Service

| Study Intersection Approach | Existing plus Approved Conditions | | | | Existing plus Approved plus Project Conditions | | | |
|---|--------------------------------------|-----|---------|-----|---|-----|---------|-----|
| | AM Peak | | PM Peak | | AM Peak | | PM Peak | |
| | Delay | LOS | Delay | LOS | Delay | LOS | Delay | LOS |
| 1. Soscol Ave/McKinstry St | 6.4 | A | 8.2 | A | 6.7 | A | 8.6 | A |
| 2. Soscol Ave/First St | 37.3 | D | 36.0 | D | 37.2 | D | 35.9 | D |
| 3. McKinstry St/First St | 2.7 | A | 3.8 | A | 3.1 | A | 4.7 | A |
| <i>Northbound (McKinstry St) Approach</i> | 14.9 | B | 24.1 | C | 15.4 | C | 28.2 | D |
| <i>Southbound (McKinstry St) Approach</i> | 12.2 | B | 17.1 | C | 12.7 | B | 19.5 | C |

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Delay for stop-controlled approaches is shown in *italics*

Finding – Upon the addition of project-generated traffic to the anticipated Existing plus Approved volumes, the study intersections would be expected to continue operating acceptably, again, with imperceptible changes in average delay.

Future plus Project Conditions

Upon the addition of project-generated traffic to the anticipated Future volumes, the study intersections would be expected to continue operating at acceptable service levels during both peak periods. The Future plus Project operating conditions are summarized in Table 13.

Table 13 – Future+ Approved and Future + Approved + Project Peak Hour Intersection Levels of Service

| Study Intersection Approach | Future plus Approved Conditions | | | | Future plus Approved plus Project Conditions | | | |
|---|------------------------------------|-----|---------|-----|---|-----|---------|-----|

| | Delay | LOS | Delay | LOS | Delay | LOS | Delay | LOS |
| 1. Soscol Ave/McKinstry St | 6.8 | A | 9.3 | A | 7.1 | A | 10.0 | B |
| 2. Soscol Ave/First St | 38.1 | D | 37.3 | D | 38.0 | D | 37.2 | D |
| 3. McKinstry St/First St | 2.1 | A | 2.2 | A | 2.5 | A | 2.9 | A |
| <i>Northbound (McKinstry St) Approach</i> | 14.2 | B | 18.5 | C | 14.8 | B | 20.9 | C |
| <i>Southbound (McKinstry St) Approach</i> | 12.6 | B | 15.6 | C | 13.3 | B | 17.2 | C |

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Delay for stop-controlled approaches is shown in *italics*

Finding – Upon the addition of project-generated traffic to the anticipated Future volumes, the study intersections would be expected to continue operating acceptably with imperceptible changes in average delay.

Alternative Modes

Pedestrian Facilities

The existing sidewalks on First Street along the project frontage would adequately serve the project, effectively connecting the site to the surrounding pedestrian network. In general, the pedestrian network surrounding the project site is well connected and provides adequate access for pedestrians, especially between Downtown Napa and the Oxbow Market area. ADA accessible ramps are also provided on the existing sidewalk at the railroad crossing area.

Finding – Pedestrian facilities serving the project site are adequate.

Bicycle Facilities

Existing bicycle facilities, including bike lanes on Soscol Avenue, together with the planned bike lanes on First Street outlined in the *City of Napa Bicycle Plan* would provide adequate access for bicyclists and effectively link the project site to the surrounding bicycle network. Regarding the project frontage on First Street and plans for bike lanes, it is noted that the existing parallel parking on the south side of First Street would be removed and a Class II bike lane would be installed as part of the bike lane project.

Finding – Off-site bicycle facilities serving the project site are adequate.

Bicycle Storage

The City requires nonresidential projects with more than ten vehicle parking spaces to provide a minimum of two bicycle storage spaces with one additional space for every 10 vehicle spaces in excess of 20. With a planned supply of 124 vehicle parking spaces, the proposed project would need to provide at least thirteen bicycle parking spaces to meet this requirement.

Recommendation – The project should provide at least thirteen bicycle parking spaces on-site.

Transit

Existing transit routes are adequate to accommodate project-generated transit trips. The existing stop on Soscol Avenue at 3rd Street is within acceptable walking distance of the site. Should a project patron or employee need to use a transit route not offered at this bus stop, it would be possible to walk to the Soscol Transit Center. Additionally, the Wine Train depot is located within walking distance of the site and provides an opportunity for hotel guests to take advantage of this local attraction without using a vehicle.

Finding – Transit facilities serving the project site are adequate for the anticipated demand.

Access and Circulation

Site Access

Access to the site is proposed via two driveways. One is located on the south side of First Street west of the railroad tracks and the other is located on the north side of Water Street, just east of the railroad tracks.

The western building would be served by a single two-way drive aisle that would connect the First Street driveway to an underground parking garage. This driveway would be restricted to right turn movements in and out. The eastern building would be served by the full access driveway on Water Street, which would provide access to another below-grade parking garage.

Valet Operations

Valet parking services would be provided in front of the eastern building only, where all patrons would arrive for check-in. The sub-grade parking in the western building would be accessed by the valet drivers only. All existing parallel parking spaces along First Street would be removed as part of the plans to install bike lanes, and the curb set back to create the passenger loading area and valet space. This set-back area will include the majority of the east building frontage and is proposed to be at least 100 feet in length, with sufficient space to accommodate four to five vehicles. All employees would valet their own vehicles.

Water Street

Water Street would be converted from a public to a private street with a reduced cross-section as a result of the proposed project. The footprint of the hotel building would extend 20 feet into the 60-foot wide Water Street right-of-way. The project site plan depicts the reduced cross-section and shows an 11-foot travel lane in each direction with eight feet of parking and a ten-foot sidewalk on the south side of Water Street. Per section 170.06.030 of the City's Municipal Code, private streets are not typically dedicated or maintained as public streets, they afford principal means of access to uses on two or more lots, and they should be approved by the City. Based on Section 16.36.030. Circulation and Traffic, the applicant should provide a feasible method for maintenance of, and parking enforcement on, Water Street upon conversion to a private street, which shall be subject to approval by the City.

Recommendation – Given that Water Street would be converted to a private street and modified to have a narrower cross section as a result of the proposed project, the applicant should provide a street maintenance and parking enforcement plan for City review.

Sight Distance

At driveways a substantially clear line of sight should be maintained between the driver of a vehicle waiting on the driveway and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either cross the street, turn left, or turn right, without requiring the through traffic to radically alter their speed. Sight distance should be measured from a 3.5-foot height at the location of the driver on the minor road to a 4.25-foot object height in the center of the approaching lane of the major road. Set-back for the driver on the crossroad is recommended as a minimum of 15 feet, measured from the edge of the traveled way.

Sight distances along First Street from the western project driveway were evaluated based on sight distance criteria contained in the *Highway Design Manual* published by Caltrans. The recommended sight distance for driveways is based on stopping sight distance, with approach travel speed used as the basis for determining the recommended sight distance.

For the posted 25-mph speed limit on First Street, the recommended sight distance is 150 feet. Field measurements indicate that there is at least 150 feet of sight distance available to the west, which allows drivers to view traffic in the intersection with Soscol Avenue, and more than 250 feet of sight distance to the east along First Street. The latter sight distance condition assumes that vehicles are parked along the southern side of First Street, east of the railroad tracks.

The eastern driveway was not evaluated for sight distance since it is located at the end of a “dead end” street and vehicles would be exclusively entering from and exiting to the east.

Finding – Sight distance at the project driveway on First Street would be adequate for the posted speed limit.

Conclusions and Recommendations

Conclusions

- The proposed project is anticipated to generate an average of 834 daily trips, including 40 trips during the a.m. peak hour and 66 trips during the p.m. peak hour.
- The study intersections of Soscol Avenue/McKinstry Street, Soscol Avenue/First Street, and McKinstry Street/First Street are currently operating acceptably at LOS A, D, and A (respectively) during both peak hours. Upon the addition of project-related traffic to the Existing volumes, the study intersection would be expected to continue operating at the same level of service during both peak hours.
- Upon the addition of traffic associated with approved projects in the surrounding vicinity, the study intersections are expected to continue operating acceptably at LOS A, D, and A during both peak hours without and with project-generated traffic added.
- The project would meet the City's crucial corridor requirements.
- Existing and planned pedestrian, bicycle, and transit facilities would provide adequate access for the anticipated demand. No bicycle parking facilities are shown on the plans; however, the project needs to provide thirteen bicycle parking spaces on-site to meet City requirements.
- Sight distance on First Street at the project driveway is adequate for the posted 25-mph speed limit.
- On-site circulation is expected to operate acceptably.

Recommendations

- The project should provide at least thirteen bicycle parking spaces on-site.
- The applicant should provide a street maintenance and parking enforcement plan for Water Street.
