WHEREAS, the City's primary feed of potable water from the Barwick Jamieson Water Treatment Plant to the City of Napa service area is a 36-inch asbestos-cement (AC) pipe installed in 1967; and

WHEREAS, the main is critical to the City's ability to convey water throughout the City; and

WHEREAS, any further disruptions at the same time as a 36-inch AC transmission main break can cause major impacts and restrict the ability to provide water to large portions of the City; and

WHEREAS, the City has had nine main breaks on the 36-inch AC main since 2020. Four of these breaks have occurred in paved residential areas over the last six months. Two of the recent failures were due to holes in the pipe wall rather than at the joint; and

WHEREAS, 36-inch main breaks have the potential to damage surrounding pavement, may take several days to months to repair, and abruptly release large volumes of water that may severely damage public and/or private property; and

WHEREAS, due to the increased frequency of breaks and more damaging leaks, the 36-inch AC transmission main needs to be replaced by 36-inch steel pipe; and.

WHEREAS, on January 16, 2025, based on a recommendation from the Utilities Director, the City Manager made a written determination that the potential future risk of further damage to the public and/or private property due to the 36-inch AC main breaks, poses a clear and imminent danger requiring immediate action for the replacement of the 36-inch AC transmission main to prevent or mitigate further loss or damage; and
